RIGHTS TO FAI INTERNATIONAL SPORTING EVENTS

All international sporting events organised wholly or partly under the rules of the Fédération Aéronautique Internationale (FAI) Sporting Code¹ are termed *FAI International Sporting Events*². Under the FAI Statutes³, FAI owns and controls all rights relating to FAI International Sporting Events. FAI Members⁴ shall, within their national territories⁵, enforce FAI ownership of FAI International Sporting Events and require them to be registered in the FAI Sporting Calendar⁶.

Permission and authority to exploit any rights to any commercial activity at such events, including but not limited to advertising at or for such events, use of the event name or logo for merchandising purposes and use of any sound and/or image, whether recorded electronically or otherwise or transmitted in real time, must be sought by way of prior agreement with FAI. This includes specifically all rights to the use of any material, electronic or other, that forms part of any method or system for judging, scoring, performance evaluation or information utilised in any FAI International Sporting Event⁷.

Each FAI Air Sport Commission⁸ is authorised to negotiate prior agreements on behalf of FAI with FAI Members or other entities as appropriate, of the transfer of all or parts of the rights to any FAI International Sporting Event (except World Air Games events⁹) which is organised wholly or partly under the Sporting Code section¹⁰ for which that Commission is responsible¹¹. Any such transfer of rights shall be by "Organiser Agreement"¹² as specified in the current FAI Bylaws Chapter 1, para 1.2 "Rules for Transfer of Rights to FAI International Sporting Events".

Any person or legal entity which accepts the responsibility for organising an FAI Sporting Event, whether or not by written agreement, in doing so also accepts the proprietary rights of FAI as stated above. Where no formal transfer of rights has been established, FAI retains all rights to the event. Regardless of any agreement or transfer of rights, FAI shall have, free of charge for its own archival and/or promotional use, full access to any sound and/or visual images of any FAI Sporting Event, and always reserves itself the right to have any and all parts of any event recorded, filmed and/or photographed for such use, without charge.

VOLUME F3 AEROBATICS

SECTION 4C – MODEL AIRCRAFT – F3 – RADIO CONTROL AEROBATICS

Part Five – Technical Regulations for Radio Controlled Contests

- 5.1. Class F3A -R/C Aerobatic Power Model Aircraft
- 5.10 Class F3M -Large R/C Aerobatic Power Model Aircraft
- 5.9 Class F3P -Indoor R/C Aerobatic Power Model Aircraft
- 5.12 Class F3S -R/C Jet Aerobatic Power Model Aircraft (Provisional)
- Annex 5A F3A -Description of Manoeuvres
- Annex 5B F3A -R/C Aerobatic Power Model Aircraft Manoeuvre Execution Guide
- Annex 5G - F3A -Unknown Manoeuvre Schedules
- Annex 5C F3M – Flying and Judging Guide
- Annex 5L - F3M -Description of Manoeuvres
- Annex 5M - F3P -Description of Manoeuvres
- Annex 5X - F3S -Description of Manoeuvres
- Annex 5N - F3A -World Cup Rules

THIS 2016 EDITION INCLUDES THE FOLLOWING AMENDMENTS MADE TO THE 2014 CODE

These amendments are marked by a double line in the right margin of this edition

Paragraph	Plenary meeting approving change	Brief description of change	Change incorporated by
F3A	2015		Kevin Dodd Technical Secretary
5.1.1		Additional text in definition regarding processing.	
5.1.2		Amendment to sound/noise measurement regime.	
5.1.8 e)		Starting circles.	
5.1.8 h)		Change of wording from security line to safety line.	
5.1.8 k)		Expand on conditions for a sound re-test.	
5.1.8 m)		Change of wording to include electronic scoring.	
5.1.8 n)		Delete requirement to rank other than in order of placing.	
5.1.9 d)		Subcommittee authorised to approve scoring systems.	
5.1.9 f)		Clarified use of TBL scoring system for smaller events.	
5.1.10 a), b)		Deleted reference to current list of judges so as to include upcoming approved judges.	
5.1.10 h)		Clarified open international events to include other smaller events for judging purposes.	
5.1.11 g)		Deleted	
5.1.11 m)		Change to starting procedure.	
5.1.13		New schedules.	
F3M			
5.10		Complete rewrite of the section: F3M - Large R/C aerobatic power model aircraft. See also Annexes 5C and 5L.	
F3P			
5.9.10 c), d)		Clarification of make-up of judging panel.	
5.9.13		New schedules	
F3S			
5.12.13		Amended schedule	
Annexes			
Annex 5A		New schedules.	
Annex 5B – 5B.5.		Clarified method of scoring in judges' guide.	
Annex 5B – 5B.8.8.		Description of torque-roll	
Annex 5C		New annex: F3M Flying and Judging Guide	
Annex 5G – 2.5, 2.6, 2.8		Changed requirements for manoeuvres and increase K-factors to 72.	
Annex 5G – 8.2		F3A Turnaround manoeuvres.	
Annex 5L		New F3M known sequences – 2016 and 2017	
Annex 5N		Addition of F3P and F3M classes for World Cup	
Annex 5N – 5N.4		Clarification of points allocation to competitors.	
Annex 5N		Restructure 5N.4 regarding points allocation.	
Annex 5X S-15.01/S-15.13		Swapped first and last manoeuvres and new aresti.	
5N.10		Consequential change for ABR Section 4B Para. B.18.1. : increase protest fee from 35 to 50 Euro.	

Four-Year Rolling Amendments for Reference			
Paragraph	Plenary meeting approving change	Brief description of change	Change incorporated by
There were no changes at the 2014 Plenary Meeting			

Four-year Rolling Amendments for Reference.../cont

Paragraph	Plenary meeting approving change	Brief description of change	Change incorporated by
F3A			
5.1.2, 5.1.9 – 5.1.12	n/a	Applied sub-para numbering for clarity.	Jo Halman Technical Secretary
5.1.8		Corrected the duplicated sub-para number	
5b.8.9		Corrected English	
5.12	2013	Added a clarification note.	Jo Halman Technical Secretary
5.2.1 h) & i)		Clarification regarding operation of the noise test.	
5.1.5		Clarification of attempt.	
5.1.8 g)		Additional text for downgrading a manoeuvre	
5.1.8 h)		Exception to the primary area of manoeuvres	
5.1.9		Change to the numbers entitled to semi-final flights	
5.1.10 a), d), f); i)		Inclusion of Continental Championships and change to the entry numbers reference the number of judges required.	
5.1.10 g)		New paragraph regarding exceeding the maximum entries.	
5.1.11 m)		2nd paragraph: clarification of propulsion failure during the sound test.	
5.1.13		New schedules: Advanced A-16; Preliminary P-17; Semi & Final F-17.	
Annex 5A		Manoeuvre descriptions for the new schedules above.	
Annex 5A			
A-16.07		Corrected 45° to 60°	
P-17.05		Corrected "push" to "pull" after the final roll.	
P-17.07		Corrected 45° to 60°	
Schedule P-17		Replaced the Aresti diagram with a corrected diagram.	
Schedule F-17		Replaced the Aresti diagram with a corrected diagram.	
Annex 5A		Aresti diagrams for the above new schedules.	
Annex 5B 8.6		Add a new manoeuvre "Barrel Rolls". Subsequent paragraphs re-numbered.	
Annex 5B 8.10		Clarification of a stall turn.	
Annex 5B.13		Clarification of a centre manoeuvre.	
Annex 5G2.8		Correct the K factors to a total of 70.	
5.10.12, 5.10.13, 5.10.16	n/a	Applied sub-para numbering for clarity.	
5.10.13d)	2013	Addition of rules regarding the expiry of the flight time.	
5.10.14 b		Corrected "patterns" to "manoeuvres".	
5.10.14 c		Reduce the flight time to 4 minutes.	
F3P			
5.9.9	2013	Increase the number of pilots entitled to 3 additional flights.	
5.9.13		New schedules Preliminary AP-15 & Final AF-15	
Annex 5 M		Manoeuvre descriptions and Aresti diagrams for the new schedules above.	
F3S			
5.12.1	2013	Clarify the definition of an RC Aerobatic jet model	
5.12.4, 5.12.9, 5.12.12		Refers to the F3A rule in line with the volume structure policy.	
5.12.8, 5.12.10, 5.12.11		Refers to the F3A rule in line with the volume structure policy plus an exception.	
5.12.13		Corrected the S-15 schedule	
Annex 5X		Corrected manoeuvre descriptions for the F3S schedules.	

Paragraph	Plenary meeting approving change	Brief description of change	Change incorporated by
There were no changes at the 2012 Plenary Meeting			

Paragraph	Plenary meeting approving change	Brief description of change	Change incorporated by
Front page, Page 5	n/a	Corrected class F3S as "provisional".	Jo Halman Technical Secretary
5.1.13		A14.10, P-15.06, F15.03, F-15.07 corrected title to match K factor list and description test. Schedule A-12 deleted in K factor list, manoeuvre descriptions and Aresti diagram.	
5B.8.3		Corrected English in the third paragraph.	
5.1.1	2011	Variable thrust direction not allowed	Michael Ramel S-C Chairman
5.1.2		Propulsion shut-off/idle at R/C failure	
5.1.2		Battery charging for sound re-test	
5.1.2		Exception of R/C open loop definition	
5.1.2		Additional restrictions for control functions	
5.1.5		Clarification of propulsion failure	
5.1.8		Clarification of marking procedure	
5.1.8		Re-definition of manoeuvring zone	
5.1.8		Re-definition reasons for forced landing	
5.1.9		Precision of procedures	
5.1.10		Precision of procedures	
5.1.11		Reduction of number of models processed for teams	
5.1.11		Precision of procedures	
5.1.11		Procedure for voltage check	
5.1.11		Procedure for connecting/disconnecting electric power	
5.1.11		Flight time split in 2min starting time, 8min flying time	
5.1.12		Precision of procedures	
5.1.13		Introduction of Advanced Schedules A-12, A-14	
5.1.13		Implementation of Preliminary Schedules P-13, P-15	
5.1.13		Implementation of Semi-final/Final schedules F-13, F15	
Annex 5A		Manoeuvre description A-12, A-14	
Annex 5A		Manoeuvre description P-13, P-15	
Annex 5A		Manoeuvre description F-13, F-15	
Annex 5B		Introduction of Manoeuvre Execution Guide	
Annex 5G		Computer composition of Unknown Schedules possible	
Annex 5G		Increased challenges in Unknown Schedules	
Annex 5G		Additional Unknown Manoeuvres	
5.10.3	2011	Noise level limit raised	Michael Ramel S-C Chairman
5.10.14		Implementation of Known Schedule 2012-2013	
Annex 5L		Description of Known Schedule 2012-2013	
5.9.1, 2, 9, 11	n/a	Rationalisation of commonality with F3A in part.	
5.9.5, 6, 7, 8,	n/a	Rationalisation of commonality with F3A entirely	

Four-year Rolling Amendments for Reference.../cont

5.9.1	2011	Variable thrust direction not allowed, except for F3P-AFM	
5.9.8		Redefinition of manoeuvring area, precision of procedures	
5.9.9 – 5.9.12		Precision of procedures	
5.9.13		Preliminary Schedule F3P-AP-13	
AP-13.06	n/a	Added missing words “¼ roll down”	Michael Ramel S-C Chairman
5.9.13	2011	Final Schedule F3P-AF-13	
AF-13.06	n/a	Added missing word “Upright”.	
5.9.14		Consequential change: deleted as now part of the fully amended Annex 5B.	
Annex 5M	2011	Manoeuvre descriptions of F3P-AP-13, F3P-AF-13	
Annex 5N		Five (5) judges per panel, TBL mandatory for World Cup Competition	
Annex 5 N	n/a	Corrected the F3 Aerobatic Sub-committee name	Jo Halman Technical Secretary
5.12	2011	New provisional class F3S - Jets	
Throughout	n/a	“Security line” changed to “Safety line”.	
		Added section headers for clarity	

RULE FREEZE FOR THIS VOLUME

With reference to paragraph A.13 of Volume ABR:

In all classes, the two-year rule for no changes to model aircraft/space model specifications, manoeuvre schedules and competition rules will be strictly enforced. For Championship classes, changes may be proposed in the year of the World Championship of each category.

For official classes without Championship status, the two-year cycle begins in the year that the Plenary Meeting approved the official status of the class. For official classes, changes may be proposed in the second year of the two-year cycle.

- a) changes for F3A, F3M, and F3P can next be agreed at the Plenary meeting 2017 for application from January 2018;
- b) provisional classes are not subject to this restriction.

The only exceptions allowed to the two-year rule freeze are genuine and urgent safety matters, indispensable rule clarifications and noise rulings.

PAGE DELIBERATELY LEFT BLANK

VOLUME F3 AEROBATICS**PART FIVE – TECHNICAL REGULATIONS FOR RADIO CONTROLLED CONTESTS****5.1. CLASS F3A – AEROBATIC POWER MODEL AIRCRAFT****5.1.1. Definition of a Radio Controlled Aerobatic Power Model Aircraft**

A model aircraft, but not a helicopter, which is aerodynamically manoeuvred in attitude, direction, and altitude by a pilot on the ground using radio control. Variable thrust direction of the propulsion device(s) is not allowed.

General Characteristics of Radio Controlled Aerobatic Model Aircraft shall be verified in processing procedures as per FAI Sporting Code, Section 4, Volume ABR, for each participating model aircraft prior to a competition. Not permitted equipment must not be installed.

5.1.2. General Characteristics of Radio Controlled Aerobatic Power Models:

Maximum overall span 2000mm

Maximum overall length 2000mm

Maximum total weight, with batteries 5000g

(except for Class F3M)

- a) A tolerance of 1% will be allowed for possible inconsistencies in measurement instruments for size, weight, and voltage unless otherwise stated.
- b) Propulsion device limitations: Any suitable propulsion device may be utilised. Propulsion devices that are not permitted are those requiring solid expendable propellants, gaseous fuels (at room temperature and atmospheric pressure), or liquefied gaseous fuels. Electric powered model aircraft are limited to a maximum of 42.56 volts for the propulsion circuit, measured off load, and prior to flight while the competitor is in the ready box.
- c) The propulsion device(s) must automatically shut-off or fully idle at the moment a R/C signal failure occurs.
- d) Paragraph B.3.1.a) of Section 4B (Builder of Model aircraft) is not applicable to class F3A.
- e) The maximum sound/noise level of the model aircraft and its propulsion device, shall be 94 dB(A) measured at 3m from the centre line of the model aircraft with the model aircraft placed on the ground over concrete, macadam, grass, or bare earth at the flight line.
- f) The tolerance of the sound/noise level measurement is the specified tolerance of the manufacturer of the measuring instrument.
- g) With the propulsion device running at full power, the measurement will be taken 90 degrees on the right-hand side, with the nose of the model aircraft pointing into the wind. The Class 1 SLM (Sound Level Metre) microphone shall be placed on a stand 30cm above the ground in line with the propulsion device. Other than the helper restraining the model aircraft, and the sound steward, no persons or sound/noise reflecting or sound absorbing objects shall be nearer than 3m to the model aircraft or the microphone. The sound/noise measurement shall be made as part of model processing. Electric powered model aircraft must have installed the same batteries for all model processing procedures. The sound test area must be located in a position that does not create a safety hazard to any person around.
- h) In the event of a model aircraft failing the sound/noise test, indication of the result or the reading shall be given to the competitor, and his team manager, and both the transmitter and the model aircraft shall be impounded by a flight line official immediately following the sound test. The competitor and his equipment shall remain under supervision of the flight line official, while modifications or adjustments may be made and the propulsion battery is fully recharged. The model aircraft shall be re-tested under regular operational conditions within 90 minutes by a second noise steward using a second Sound Level Metre, and in the event that the model aircraft fails the re-test, its entire model processing has failed.
- i) Radio equipment shall be of the open loop type (ie no electronic feedback from the model aircraft to the ground except for the stipulations in Volume ABR B.11.2). Auto-pilot control utilising inertia, gravity or any type of terrestrial reference is prohibited. Automatic control sequencing (pre-programming) or automatic control timing devices are prohibited.

Example:

Permitted:

1. Control rate devices that are manually switched by the pilot.
2. Any type of button or lever, switch, or dial control that is initiated or activated and terminated by the competitor.
3. Manually operated switches or programmable options to couple and mix control functions.

Not permitted:

1. Snap roll buttons with automatic timing mode.
2. Pre-programming devices to automatically perform a series of commands.
3. Auto-pilots or gyros for automatic wing levelling or other stabilisation of the model aircraft.
4. Automatic flight path guidance.
5. Propeller pitch change with automatic timing mode.
6. Any type of voice recognition system.
7. Conditions, switches, throttle curves, or any other mechanical or electronic device that will prevent or limit sound level of the propulsion device during the sound/noise test.
8. Any type of learning function involving manoeuvre to manoeuvre or flight to flight analysis.

5.1.3. Definition and Number of Helpers

A helper may be a Team Manager, another competitor, or an officially registered supporter. Each competitor is permitted one helper (usually the caller) during the flight. Two helpers may be present and assist during the starting of the motor(s). One person, either a helper, or the team manager, or the caller, may place the model aircraft for take-off and retrieve the model aircraft following the landing. In exceptional circumstances, another helper may join the competitor and caller/helper during the flight, but only to hold a sun-shield as protection from direct sunlight. These protection devices must not interfere with the judges' vision of the manoeuvres. Physically disabled competitors requiring an additional helper and/or caller or other assistance, must request permission with full details, with their entry, from the organiser of a championship. This additional assistance must be provided by the competitor, must not give him an unfair advantage over other competitors, and must not unduly delay or interfere with the running of the competition. Except for communication between the caller and the competitor, no other performance-enhancing communication with helpers is permitted during the flight.

5.1.4. Number of Flights

Competitors have the right to the same number of preliminary, semi-final, or finals flights. Only completed rounds will be counted. Only when all competitors in the preliminary, semi-final, and final rounds, have had the opportunity to complete the same number of rounds, can the results of the rain-interrupted (or other delay) competition be determined.

5.1.5. Definition of an Attempt

There is an attempt when the competitor is given permission to start.

If the propulsion device fails after the model aircraft becomes airborne, the attempt will be deemed complete.

5.1.6. Number of Attempts

Each competitor is entitled to one attempt for each official flight.

Note: An attempt can be repeated at the contest director's discretion only when any unforeseen reason beyond the control of the competitor, causes the model aircraft to fail to start (eg there is radio interference). Similarly, in a flight that is interrupted by any circumstance beyond the control of the competitor, the competitor is entitled to a reflight, with the entire schedule being flown and judged, but only the affected manoeuvre and the unscored manoeuvres that follow will be tabulated. This reflight should take place within 30 minutes of the first flight, in front of the same set of judges, or be the first flight after the judges' break, or, if it involves a protest, as soon as the FAI Jury has deliberated and communicated the outcome of the protest to the contest director. The result of the reflight will be final.

5.1.7. Definition of an Official Flight

There is an official flight when an attempt is made whatever the result.

5.1.8. Marking

- a) Each judge has to assess each manoeuvre and any other relevant action of the competitor individually and independently from the other judges. The criteria for judging are contained in the Description of Manoeuvres (Annex 5M) and in the Manoeuvre Execution Guide (Annex 5B)
- b) Each manoeuvre may be awarded marks, in whole numbers, between 10 and 0 by each of the judges during the flight. During tabulation, these marks are multiplied by a coefficient (K-Factor) which relates to the difficulty of the manoeuvre.
- c) Any manoeuvre not completed, or flown out of sequence with the stated schedule shall be scored zero (0). Zero scores need not be unanimous, except in cases where an entirely wrong manoeuvre was performed. Judges must confer after the flight in these cases, bringing it to the attention of the flight line director/contest director on site.
- d) Take-off and landing procedures are not judged and are not scored.
- e) The manoeuvring zone is vertically spread in front of and at a distance of approximately 150 m from the pilot. It is laterally limited by two virtual vertical planes above the extension of two lines on the ground each at an angle of 60 degrees left and right from the intersection of a centre line with the safety line. The centre line is positioned on the ground perpendicular to the safety line on the ground which is parallel to the runway. Two starting circles of 3m diameter are marked on the runway, one left and one right at minimum 15 m off the centre line, also serving for sound/noise measurement, if required. The upper limit of the manoeuvring zone is defined by the virtual plane stretching up 60 degrees from the ground at the intersection of all ground lines.
- f) The pilot is normally placed on the intersection of all ground lines.
- g) Manoeuvres must be performed such that they can be seen clearly by the judges. If a judge, for some reason beyond the control of the competitor, is not able to follow the model aircraft through the entire manoeuvre, he may set the "Not Observed" (N.O.) mark. In this case, the judge's mark for that particular manoeuvre will be the average of the numerical marks given by the other judges, rounded to the nearest whole number. If no such average is achievable, the competitor has the right for a reflight as per paragraph 5.1.6. If, for some reason within the control of the competitor, a judge is not able to follow the model aircraft through the entire manoeuvre, he has to downgrade the manoeuvre accordingly.
- h) Centre manoeuvres should be primarily performed in the centre of the manoeuvring zone while turn around manoeuvres should not extend past the lateral limits. Vertical height should not exceed the upper limit. Also, manoeuvres should be primarily performed along a line of flight approximately 150m in front of the safety line. Infractions of this rule will be cause for downgrading by each judge individually and in proportion to the degree of infraction. Exceptions to this rule are cross-box manoeuvres, 3D-maneuvres, or manoeuvres in a stalled condition, as well as the horizontal circle manoeuvres which, of necessity, may deviate from the 150m distance of flight.
- i) The manoeuvring zone shall be clearly marked with white (or contrasting colour to the background) vertical poles, approximately 100mm in diameter and approximately 4m high, placed on centre and 60 degrees each side of centre on a line 150m in front of the competitor's position. Flags, streamers, or boards of contrasting colour to the background, should be mounted on the poles to improve visibility. White (or contrasting) lines, originating at the competitor's position and extending outward at least 50m, shall also be used to mark the centre and extreme limits (60 degrees left and right of centre) of the manoeuvring zone. Audible and visual signals to indicate violations of the manoeuvring zone must not be used.
- j) The judges shall be seated not more than 10m, and not less than 7m behind the competitor's position (the apex of the 60 degree lines) and within an area described by the extension of the 60 degree lines to the rear of the competitor. The judges must be seated abreast, usually separated by 2m, with scribes or score secretaries separating them.

- k) At the conclusion of the flight, each judge must independently consider if the in-flight sound level of the model aircraft is too loud. If a majority of the judges consider the in-flight sound level of the model aircraft to be too loud, then the flight score will be penalised by 10 points for each counting judge on that panel during the flight. If, during a flight, the sound level of the model aircraft increases perceptibly as a result of an equipment malfunction, or of a condition initiated by the competitor, the flight line director may request a sound re-test and in the event that the model aircraft fails the re-test, the score for the preceding flight shall be zero. For this re-test, both, the transmitter and the model aircraft shall be impounded by a flight line official immediately following the flight. No modification or adjustment to the model aircraft shall be permitted (other than refuelling or battery recharging). The competitor and his equipment shall remain under supervision of the flight line official. The model aircraft shall be re-tested under regular operational conditions within 90 minutes. If an equipment malfunction during the flight (such as mechanical failure of the exhaust/muffler system) causes excessive noise, the flight line director may request the competitor to land his model aircraft, and scoring will cease from the point of malfunction.
- l) If a model aircraft is, in the opinion of the judges, unsafe or being flown in an unsafe or inappropriate manner, they may bring this to the attention of the flight line director, who may instruct the pilot to land.
- m) The individual manoeuvre scores given by each judge for each competitor must be made public at the end of each round of competition. The team manager must be afforded the opportunity to check that the scores on each judge's score document correspond to the tabulated scores (to avoid data capture errors). The score board/monitor must be located in a prominent position at the flight line, in full view of the competitors and the public.

5.1.9. Classification

- a) For World and Continental Championships, each competitor will have four preliminary (Schedule P) flights, with the best three normalised scores counting to determine the preliminary ranking. The top half, but not more than 30 competitors, will then have two additional semi-final flights flying the known finals schedule. The total of the best three preliminary flights (normalised again to 1000 points) will count as one score along with the two semi-finals scores to provide three scores, the best two to count for semi-finals classification.
- b) The top ten competitors of the semi-finals of a World or Continental Championship where there is an entry of more than 40 competitors, will then have four additional flights to determine the individual winner. For a World or Continental Championship with less than 40 competitors, the top five competitors will advance to the finals. Two final flights will be the current known finals schedule (F) and two will be unknown schedules (two different schedules, UK1 and UK2) (see 5.5). The known and unknown schedules must be flown in alternating sequence, starting with the known finals schedule (F). The best score from the known schedule will be combined with the scores from both unknown schedules for final classification. In the case of a tie the semi-final score will be used to decide the higher classification.
- c) The team classification is established at the end of the competition (after the finals) by adding the numerical final placing of the best three team members of each nation. Teams are ranked from the lowest numerical scores to the highest, with complete three-competitor teams, ahead of two-competitor teams, which in turn are ranked ahead of one-competitor teams. In the case of a tie, the best individual placing decides the team ranking.
- d) For World and Continental Championships, the scores for all rounds, preliminary, semi-finals and finals, will be computed using the Tarasov-Bauer-Long (TBL) statistical averaging scoring system. Only computer tabulation systems containing the TBL algorithm and judge analysis programs that have been Subcommittee approved can be used at World and Continental Championships.
- e) All scores for each round, preliminary, semi-final and finals, will then be normalised as follows. When all competitors have flown in front of a particular group of judges (ie a round) the highest score shall be awarded 1000 points. The remaining scores for that group of judges are then normalised to a percentage of the 1000 points in the ratio of actual score over winner's score.

cont/...

$$\text{Points}_x = \frac{S_x}{S_w} \times 1000$$

Points_x = points awarded to competitor X

S_x = score of competitor X

S_w = score of winner of round

Note 1: Final and semi-final flights to determine the individual winner are usually only required for World and Continental Championships. For open international events, national championships, and domestic competitions, the total of the three best preliminary flights out of four or the best two out of three may be used to determine the individual winner and team placing. Flights of Schedule F may be incorporated depending on local circumstances and the time available.

- f) In the event of adverse weather conditions where no further flying is possible, the preliminary classification may be determined as follows:

One round/flight completed by each competitor: round/flight to count

Two rounds/flights completed by each competitor: best round/flight to count

Three rounds/flights completed by each competitor: best two rounds/flights to count

Four rounds/flights completed by each competitor: best three rounds/flights to count.

Note 2: The TBL score tabulation system can only be applied for events with at least 5 competitors and 5 judges.

5.1.10. Judging

- a) For a World or Continental Championship with more than 80 competitors, the organiser must appoint four panels of five judges each (a total of twenty judges). The judges must be of different nationalities. Those selected must reflect the approximate geographical distribution of teams participating in the previous World Championship with the final list approved by the CIAM Bureau. At least one third, but not more than two thirds of the judges must not have judged at the previous World Championship. Judge assignment to the four panels will be by random draw.
- b) The invited judges for a World or Continental Championship, must be selected from the applicable list of current or upcoming approved FAI International Judges and must have had a reasonable amount of F3A judging experience of both current P and F schedules, and must submit a résumé of his judging experience to the organiser during the nomination process. The organiser must in turn submit the résumés to the CIAM Bureau for approval.
- c) For the semi-final rounds of a World Championship the judges will be arranged in two groups of ten judges. Assignment to the two groups will be by random draw.
- d) For a World or Continental Championship with 80 or fewer, but more than 40, competitors the organiser must appoint two panels of five judges each (a total of ten judges). The judges must be of different nationalities and must be selected from a current list of FAI International Judges. Judge assignment to the two panels will be by random draw.
- e) For Continental Championships with 40 or fewer competitors, the organiser must appoint a single panel of five judges, with the same selection criteria as above.
- f) For a World or Continental Championship with 80 or fewer, but more than 40, competitors two panels of five judges may be used for the preliminary and semi-final rounds, and one panel of ten judges may be used for the final rounds. For a Continental Championship with 40 or fewer competitors, one panel of five judges may be used for preliminary, semi-final, and final rounds.
- g) The limits of 80/40 competitors may be exceeded under special circumstances provided a reasonable time schedule has been approved by CIAM Bureau.
- h) For open international events or other smaller events, where the TBL statistical averaging scoring system is not used, the highest and lowest marks for each manoeuvre may be discarded, but only where four or more judges are used. It is recommended that this is applied at national championships, and domestic competitions, too.
- i) For the final rounds of a World or Continental Championship with more than 80 competitors, the twenty judges will be arranged in three groups, a left hand group of five judges to judge only the left turn-around manoeuvres, a centre group of ten judges to judge only the centre manoeuvres and a right hand group of five judges to judge only the right turn-around manoeuvres. Judge

assignments to the three groups will be by random draw for rounds one and two (one known and one unknown round) with a second draw for rounds three and four, except a judge will not serve in the same group as in the previous draw. For each competitor, the score from the three groups (following TBL computation) will be combined for a total score for the flight.

- j) Before every World or Continental Championship, there shall be a briefing for the judges, followed by training flights by non-competitors. Also, warm-up flights for the judges should be flown by non-competitors before the first official preliminary flight each day. For the semi-finals the highest placing non-semi-finalists and for the finals the highest placing two non-finalists should be awarded the honour of performing the warm-up flights. Warm-up flights should be judged but under no circumstances should they be tabulated. Any deviations from the above procedures must be stated in advance by the organisers and must have prior approval of the CIAM or the CIAM Bureau.

5.1.11. Organisation for Radio Controlled Aerobatics Contests

- a) Members of a National team, who have processed only one model aircraft each, may make use of the second model aircraft processed by another member of the same team. However, once that model has been used by a team member in that competition, it may not be used by any other competitor. If that team member did not process the model aircraft in the first place, then it must be re-registered and re-marked appropriately. This is the responsibility of the team manager.
- b) For transmitter and FM frequency control see Section 4B, paragraph B.11.
- c) The draw for flight order will be done for each flight line, so that FM frequencies are separated with two competitors in between. Team members will not be drawn to fly directly after each other. Team members on separate flight lines will be separated by at least two competitors. Competitor identification numbers will only be assigned after this flight order draw, by competitor group, and in numerical ascending order.
- d) For flights two, three and four of the preliminary rounds the flight order will start $\frac{1}{4}$, $\frac{1}{2}$ and $\frac{3}{4}$ down the flight order respectively. Organisers must take care to avoid a flight draw which will cause competitors to fly at approximately the same time each day.
- e) The flight order for the first semi-finals round will also be by random draw. The second semi-finals flight will start $\frac{1}{2}$ down the semi-finals flight order.
- f) The flight order for the first round of the finals will be established by a random draw as above. The flight order for flights two, three and four will start $\frac{1}{4}$, $\frac{1}{2}$ and $\frac{3}{4}$ down the finals flight order with decimals rounded-up.
- g) Competitors must be called by a flight line official at least five minutes before they are required to occupy the starting area.
- h) If the FM frequency is clear the competitor or his team manager will be allowed to collect the FM transmitter from the transmitter pound. The competitor and his helper(s) then occupy the starting area so that a radio check can be performed to verify the correct functioning of the radio control equipment. If there is a FM frequency conflict, the competitor must be allowed a maximum of one minute for a radio check before the beginning of the starting time.
- i) The time keeper will audibly notify the competitor when the minute is finished and immediately begin timing the starting time.
- j) According to paragraph 5.1.2., the voltage of the propulsion battery of electric powered models, must be checked by an official in the preparation area before the starting time is started.
- k) For electric powered models, the electric power circuit(s) must not be physically connected, before the starting time is begun and must be physically disconnected immediately after landing.
- l) A competitor is allowed two (2) minutes of starting time and eight (8) minutes of flying time for each flight. The timing of an attempt starts when the contest director, or timekeeper, gives an instruction to the competitor to start and the 2-min starting time begins. The openly displayed timing device/clock will be re-started to count the 8-min flying time when the model aircraft has been placed in the take-off circle. If the model aircraft is not placed with its wheels in the starting circle before/at the expiration of the 2-minute starting time, the contest director/time keeper will advise the competitor and helper that the flight may not proceed. The flight shall score zero points.

cont/ ...

With the expiry of the 8-minute flying time, the scoring will cease except for the in-flight sound assessment, which is judged after the model aircraft has landed, irrespective of the time. The contest director/time keeper will advise the pilot, helper, and the judges of the expiry of the 8-minute flying time. The clock will be stopped when the wheels of the model aircraft touch the ground for landing, as proof to the competitor of the recorded time.

- m) The competitor may not start his model aircraft unless he has been instructed by a flight line official to do so. Deliberate starts at the flight line during official flying to check the propulsion device will be subject to disqualification from that round. No public address or commentary should be made during flights.
- n) During the flight, the pilot and his helper/caller (if required) must stay in the designated position in front of the judges, at the convergence of the ground lines and under the supervision of the flight line director. The pilot must wear or display his identification/start number.

5.1.12. Execution of Manoeuvres

- a) The manoeuvres must be executed during an uninterrupted flight in the order in which they are listed in the schedule. The competitor may make only one attempt at each scored manoeuvre during the flight.
- b) The model aircraft must take-off and land unassisted, that is, no hand launched flights. If any part of the model aircraft is jettisoned during the flight, scoring will cease at that point and the competitor must be instructed by the flight line director to immediately land his model aircraft. Usually, the judges will be able to determine when a part has been jettisoned from the model aircraft. They should bring this to the attention of the flight line director on site.
- c) The direction of the first manoeuvre or the landing may be different from that of the take-off.
- d) After take-off, only turn-around manoeuvres, and not more than two (2), are allowed before starting the first manoeuvre of the schedule.

5.1.13. Schedule of Manoeuvres

For 2015-2016 Schedule A-16 is recommended to be flown in local competitions so as to offer advanced pilots a suitable way to achieve skills to step-up to P-17 Schedules.

For 2017-2018 Schedule A-18 is recommended to be flown in local competitions so as to offer advanced pilots a suitable way to achieve skills to step-up to P-19 Schedules.

For 2016-2017 Schedule P-17 will be flown in the preliminaries. Schedule F-17 will be flown in the semi-finals, as well as in the finals, alternating with unknown schedules.

For 2018-2019 Schedule P-19 will be flown in the preliminaries. Schedule F-19 will be flown in the semi-finals, as well as in the finals, alternating with unknown schedules.

Advanced Schedule A-18 (2017-2018)

	K-Factor
A-18.01 Triangle loop with ½ roll, ½ roll	K3
A-18.02 Figure Et with consecutive two ½ rolls in opposite directions, ½ roll	K3
A-18.03 Cuban 8 with roll, roll	K5
A-18.04 Half square loop with ½ roll	K2
A-18.05 Reverse Cobra Roll with consecutive two ¼ rolls	K4
A-18.06 Spin with two turns	K3
A-18.07 Figure 9 with ½ roll	K3
A-18.08 Push-Pull-Push Humpy-Bump with, consecutive two ¼ rolls (Option: with ¼ roll, ¼ roll)	K4
A-18.09 Stall Turn with ¾ roll, ¼ roll	K5
A-18.10 Half Reverse Cuban 8	K3
A-18.11 Knife-Edge flight with ¼ roll, ¼ roll	K4
A-18.12 Immelman Turn with ½ roll	K2
A-18.13 Loop with ½ roll integrated	K5
A-18.14 Half Square Loop on Corner	K2
A-18.15 Double Key	K5
A-18.16 Half Cuban 8 with ½ roll	K3
A-18.17 Square Loop with, ½ roll, ½ roll	K4

Total K = 60

Advanced Schedule A-16 (2015-2016)**K-Factor**

A-16.01 Eye-Catcher with ½ roll	K 3
A-16.02 Half Square Loop	K 2
A-16.03 Roll Combination with two ½ rolls	K 4
A-16.04 Stall Turn	K 3
A-16.05 Humpty-Bump with ¾ roll, ¾ roll	K 5
A-16.06 Comet with ½ roll, ½ roll	K 4
A-16.07 Six-sided Loop	K 4
A-16.08 Half Loop	K 2
A-16.09 Figure S	K 4
A-16.10 Spin with 3 turns	K 4
A-16.11 45° Upline with consecutively ½ roll, ½ roll	K 4
A-16.12 Reverse Pull-Pull-Push-Humpty-Bump (Option: with ¼ roll, ¼ roll)	K 3
A-16.13 Triangle Loop with roll	K 4
A-16.14 Half Square Loop on Corner with ½ roll	K 3
A-16.15 Roll Combination with consecutive two rolls	K 4
A-16.16 Half Cuban 8 with ½ roll	K 2
A-16.17 Avalanche	K 5
Total K = 60	

PRELIMINARY SCHEDULE P-19 (2018-2019)**K-Factor**

P-19.01 Triangle loop with ½ roll, consecutive two ¼ rolls, consecutive two ¼ roll, ½ roll	K 3
P-19.02 Figure Et with consecutive two ½ rolls in opposite directions, consecutive four 1/8 rolls	K 3
P-19.03 Cuban 8 with snap-roll, snap-roll	K 5
P-19.04 Half square loop with ½ roll	K 2
P-19.05 Reverse Cobra Roll with roll, consecutive two ¼ rolls	K 4
P-19.06 Inverted Spin with two turns	K 3
P-19.07 Figure 9 with ½ roll	K 3
P-19.08 Push-Push-Push Humpty-Bump with consecutive two ¼ rolls in opposite directions, consecutive two ½ rolls (Option: with ¼ roll, consecutive ½ roll, ¼ roll in opposite directions, ¼ roll)	K 4
P-19.09 Stall Turn with roll, consecutive three ¼ rolls, ¾ roll	K 5
P-19.10 Half Reverse Cuban 8 with roll	K 3
P-19.11 Knife-Edge flight with 1 ¼ roll, 1 ¼ roll	K 4
P-19.12 Immelman Turn with ½ roll	K 2
P-19.13 Loop with two 1/2 rolls integrated	K 5
P-19.14 Half Square Loop on Corner with ½ roll	K 2
P-19.15 Double Key with roll, ½ roll, ½ roll, roll	K 5
P-19.16 Half Cuban 8 with consecutive two ¼ rolls	K 3
P-19.17 Square Loop with, ½ roll, ½ roll, ½ roll, ½ roll	K 4

Total K = 60

Preliminary Schedule P-17 (2016-2017)**K-Factor**

P-17.01 Eye-Catcher with $\frac{1}{2}$ roll, $\frac{1}{2}$ roll	K 3
P-17.02 Half Square Loop with $\frac{1}{2}$ roll	K 2
P-17.03 Knife-Edge Combination with $\frac{1}{4}$ roll, roll, $\frac{1}{4}$ roll	K 4
P-17.04 Stall Turn with two consecutive $\frac{1}{4}$ rolls	K 3
P-17.05 Humpty-Bump with $\frac{3}{4}$ roll, $\frac{1}{2}$ knife-edge loop, $\frac{3}{4}$ roll	K 5
P-17.06 Comet with two consecutive $\frac{1}{4}$ rolls, $\frac{1}{2}$ roll	K 3
P-17.07 Six-sided Loop with two consecutive $\frac{1}{4}$ rolls, roll, two consecutive $\frac{1}{4}$ rolls	K 4
P-17.08 Split S Reverse Immelmann Combination with two $\frac{1}{2}$ rolls, two $\frac{1}{2}$ rolls	K 3
P-17.09 Figure S with $\frac{1}{2}$ roll integrated	K 5
P-17.10 Spin with three turns, $\frac{1}{2}$ roll	K 4
P-17.11 45° Upline with consecutively $\frac{1}{2}$ roll, roll, $\frac{1}{2}$ roll	K 4
P-17.12 Reverse Pull-Pull-Push-Humpty-Bump with roll (Option: with $\frac{1}{4}$ roll, $\frac{3}{4}$ roll)	K 3
P-17.13 Triangle Loop with two consecutive $\frac{1}{4}$ rolls, two consecutive $\frac{1}{4}$ rolls, four consecutive $\frac{1}{4}$ rolls	K 4
P-17.14 Half Square Loop on Corner with $\frac{1}{2}$ roll	K 2
P-17.15 Roll Combination with consecutive $\frac{1}{2}$ roll, snap roll, $\frac{1}{2}$ roll	K 4
P-17.16 Half Cuban 8 with consecutive two $\frac{1}{4}$ rolls	K 2
P-17.17 Loop with roll integrated	K 5
Total K = 60	

FINAL SCHEDULE F-19 (2018-2019)**K-Factor**

F-19.01 Square Loop with $\frac{1}{2}$ roll integrated, $\frac{1}{2}$ roll integrated, $\frac{1}{2}$ roll integrated, $\frac{1}{2}$ roll integrated	K 4
F-19.02 Figure 9 with two rolls	K 3
F-19.03 Vertical 8 with roll integrated	K 5
F-19.04 Stall Turn with consecutive $\frac{1}{2}$ rolls in opposite directions	K 3
F-19.05 Push-Knife-Edge-Push Humpty-Bump with 1 $\frac{1}{4}$ snap-roll, 1 $\frac{1}{4}$ snap-roll	K 6
F-19.06 Shark Fin with four consecutive $\frac{1}{4}$ rolls, $\frac{1}{2}$ roll	K 3
F-19.07 Roll Combination with four $\frac{1}{8}$ rolls, four $\frac{1}{8}$ rolls in opposite direction	K 4
F-19.08 Top Hat with two consecutive $\frac{1}{4}$ rolls, roll	K 3
F-19.09 Two Horizontal Circles with $\frac{1}{2}$ roll to the inside integrated, roll integrated in opposite direction, $\frac{1}{2}$ roll integrated in opposite direction	K 6
F-19.10 Trombone with roll	K 2
F-19.11 Double Fighter Turn with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll	K 6
F-19.12 Inverted Figure 8 with $\frac{1}{2}$ roll, roll	K 4
F-19.13 Inverted Spin with two turns, two consecutive $\frac{1}{4}$ rolls	K 4
F-19.14 Pull-Push-Pull Humpty-Bump with snap-roll, $\frac{1}{2}$ roll (Option: with 1 $\frac{1}{4}$ snap-roll, $\frac{3}{4}$ roll)	K 4
F-19.15 Roll Combination with consecutive two $\frac{1}{8}$ rolls, roll in opposite direction, consecutive two $\frac{1}{8}$ rolls in opposite direction	K 4
F-19.16 Half Loop with two $\frac{1}{2}$ rolls in opposite directions integrated	K 4
F-19.17 45° Downline with consecutive $\frac{1}{2}$ roll, two snap-rolls in opposite directions, $\frac{1}{2}$ roll	K 5
Total K = 70	

Semi-Final and Final Schedule F-17 (2016-2017)**K-Factor**

F-17.01 Triangle with two consecutive $\frac{1}{4}$ rolls, two consecutive rolls, two consecutive $\frac{1}{4}$ rolls	K 4
F-17.02 Turnaround-Avalanche with snap-roll	K 3
F-17.03 Roll Combination with consecutive $\frac{1}{2}$ roll, two $1\frac{1}{4}$ snap-rolls, $\frac{1}{2}$ roll	K 5
F-17.04 Half Square Loop with two consecutive $\frac{1}{4}$ rolls, two consecutive $\frac{1}{4}$ rolls	K 3
F-17.05 Two Loops with rolls integrated	K 5
F-17.06 Half Square Loop with consecutive roll, $\frac{1}{2}$ roll	K 2
F-17.07 Barrel-Roll	K 4
F-17.08 Knife-Edge Split S Reverse Immelmann Combination with $\frac{1}{4}$ roll, $\frac{3}{4}$ roll	K 4
F-17.09 Horizontal Double Immelmann Circle with $\frac{1}{4}$ roll, $\frac{1}{2}$ roll integrated, $1\frac{1}{2}$ snap-roll, $\frac{1}{2}$ roll integrated, $1\frac{1}{2}$ snap-roll, $\frac{1}{4}$ roll	K 6
F-17.10 Figure 6 with stall turn, roll	K 4
F-17.11 Inverted Top Hat with $\frac{1}{4}$ roll, roll, $\frac{1}{4}$ roll	K 6
F-17.12 Figure 9 with consecutive $\frac{1}{2}$ roll, roll	K 3
F-17.13 Big-M with two consecutive $\frac{1}{4}$ rolls, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll integrated, $\frac{1}{2}$ roll, two consecutive $\frac{1}{4}$ rolls	K 4
F-17.14 Half Square Knife-Edge Loop on Corner with $\frac{1}{4}$ roll, $\frac{1}{4}$ roll	K 4
F-17.15 Figure Z with snap-roll, consecutive $\frac{1}{2}$ roll, roll, $\frac{1}{2}$ roll, snap-roll	K 5
F-17.16 Clown Dance with $\frac{1}{2}$ roll integrated, spin 2 turns, $\frac{1}{2}$ roll	K 4
F-17.17 Knife-Edge Loop with consecutive eight $\frac{1}{8}$ rolls integrated	K 4

Total K = 70

ANNEX 5A**F3A – RADIO CONTROLLED AEROBATIC MODEL AIRCRAFT****DESCRIPTION OF MANOEUVRES****ADVANCED SCHEDULE A-18 (2017-2018)****A-18.01 Triangle loop with $\frac{1}{2}$ roll, $\frac{1}{2}$ roll**

From upright, perform a $\frac{1}{2}$ roll in the centre, push through a $\frac{3}{8}$ loop into a 45° upline, push through a $\frac{1}{4}$ loop into a 45° downline, push through a $\frac{3}{8}$ loop, perform a $\frac{1}{2}$ roll in the centre, exit upright.

A-18.02 Figure Et with consecutive two $\frac{1}{2}$ rolls in opposite directions, $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{8}$ loop into a 45° upline, perform consecutively two $\frac{1}{2}$ rolls in opposite directions, pull through a $\frac{5}{8}$ loop into a vertical downline, perform $\frac{1}{2}$ roll, pull through a $\frac{1}{4}$ loop, exit upright.

A-18.03 Cuban 8 with roll, roll

From upright, pull through a $\frac{5}{8}$ loop into a 45° downline, perform a roll, push through a $\frac{3}{4}$ loop into a 45° downline, perform a roll, pull through a $\frac{1}{8}$ loop, exit upright.

A-18.04 Half square loop with $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{4}$ loop, exit upright.

A-18.05 Reverse Cobra Roll with consecutive two $\frac{1}{4}$ rolls

From upright, push through a $\frac{1}{8}$ loop into a 45° downline, pull through a $\frac{1}{4}$ loop into a 45° upline, perform consecutively two $\frac{1}{4}$ rolls, pull through a $\frac{1}{8}$ loop, exit inverted.

A-18.06 Spin with two turns

From inverted, perform an inverted spin with two turns, perform a vertical downline, pull through a $\frac{1}{4}$ loop, exit upright.

A-18.07 Figure 9 with $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{2}$ roll, push through a $\frac{3}{4}$ loop, exit inverted.

A-18.08 Push-Pull-Push Humpy-Bump with, consecutive two $\frac{1}{4}$ rolls (Option: with $\frac{1}{4}$ roll, $\frac{1}{4}$ roll)

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, pull through a $\frac{1}{2}$ loop into a vertical downline, perform consecutively two $\frac{1}{4}$ rolls, push through a $\frac{1}{4}$ loop, exit inverted.

Option: From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{4}$ roll, pull through a $\frac{1}{2}$ loop into a vertical downline, perform a $\frac{1}{4}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

A-18.09 Stall Turn with $\frac{3}{4}$ roll, $\frac{1}{4}$ roll

From Inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{3}{4}$ roll, perform a stall turn into a vertical downline, perform a $\frac{1}{4}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

A-18.10 Half Reverse Cuban 8

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, pull through a $\frac{5}{8}$ loop, exit upright.

A-18.11 Knife-Edge flight with $\frac{1}{4}$ roll, $\frac{1}{4}$ roll

From upright, perform a $\frac{1}{4}$ roll, perform a knife-edge flight, perform a $\frac{1}{4}$ roll exit upright.

A-18.12 Immelman Turn with $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{2}$ loop, perform a $\frac{1}{2}$ roll, exit upright

cont/...

A-18.13 Loop with ½ roll integrated

From upright, push through a loop while integrating a ½ roll in the last 90°, exit inverted.

A-18.14 Half Square Loop on Corner

From inverted, pull through a 1/8 loop into a 45° downline, pull through a ¼ loop into a 45° downline, pull through a 1/8 loop, exit upright.

A-18.15 Double Key

From upright, pull through a ¼ loop into a vertical upline, pull through a 5/8 loop into a 45° downline, pull through a 1/4 loop into a 45° upline, pull through a 5/8 loop into a vertical downline, pull through a ¼ loop, exit upright.

A-18.16 Half Cuban 8 with ½ roll

From upright pull through a 5/8 loop into a 45° downline, perform a ½ roll, pull through a 1/8 loop, exit upright.

A-18.17 Square Loop with, ½ roll, ½ roll

From upright perform a square loop while performing a ½ roll in the up leg and a ½ roll in the down leg, exit upright.

ADVANCED SCHEDULE A-16 (2015-2016)**A-16.01 Eye-Catcher with ½ roll**

From upright, pull through a ¾ loop, push through another ¾ loop, into a horizontal line, perform ½ roll in the centre, exit inverted.

A-16.02 Half Square Loop

From inverted, pull through a ¼ loop into a vertical downline, pull through a ¼ loop, exit upright.

A-16.03 Roll Combination with two ½ rolls

From upright, perform consecutively two ½ rolls, exit upright.

A-16.04 Stall Turn

From upright, pull through a ¼ loop into a vertical upline, perform a stall turn into a vertical downline, pull through a ¼ loop, exit upright.

A-16.05 Humpty-Bump with 3/4 roll, 3/4 roll

From upright, pull through a ¼ loop into a vertical upline, perform a 3/4 roll, perform a ½ loop in knife-edge flight into a vertical downline, perform a ¾ roll, pull through a ¼ loop, exit upright.

A-16.06 Comet with ½ roll, ½ roll

From upright, perform a 1/8 loop into a 45° upline, perform a ½ roll, pull through a ¾ loop into another 45° upline, perform a ½ roll, pull through a 1/8 loop, exit inverted.

A-16.07 Six-sided Loop

From inverted, pull through a 1/6 loop into a 60° downline, pull through a 1/6 loop into another 60° downline, pull through a 1/6 loop into a horizontal line, pull through a 1/6 loop into a 60° upline, pull through a 1/6 loop into another 60° upline, pull through a 1/6 loop, exit inverted.

A-16.08 Half Loop

From inverted, pull through a 1/2 loop, exit upright.

A-16.09 Figure S

From upright pull through a ½ loop and push through another ½ loop, exit upright.

A-16.10 Spin with 3 turns,

From upright, perform a spin with 3 turns, perform a vertical downline, push through a ¼ loop, exit inverted.

cont/ ...

A-16.11 45° Upline with consecutively ½ roll, ½ roll.

From inverted, push through a ⅙ loop into a 45° upline, perform consecutively a ½ roll, a ½ roll in opposite direction, pull through a ⅙ loop exit inverted.

A-16.12 Reverse Pull-Pull-Push-Humpty-Bump (Option: with ¼ roll, ¼ roll)

From inverted, pull through a 1/4 loop into a vertical downline, pull through a ½ loop into a vertical upline, push through a ¼ loop, exit upright.

Option: From inverted, pull through a 1/4 loop into a vertical downline, perform a ¼ roll, pull through a ½ loop into a vertical upline, perform a ¼ roll, push through a ¼ loop, exit upright.

A-16.13 Triangle Loop with roll.

From upright, push through a 3/8 loop into a 45° downline, push through a ¼ loop into a 45° upline, push through a 3/8 loop into a horizontal line, perform a roll, exit upright.

A-16.14 Half Square Loop on Corner with ½ roll

From upright, push through a 1/8 loop into a 45° downline, perform a ½ roll, pull through a ¼ loop into another 45° downline, pull through a 1/8 loop, exit upright.

A-16.15 Roll Combination with consecutive two rolls

From upright, perform consecutively two rolls in opposite direction, exit upright

A-16.16 Half Cuban 8 with ½ roll

From upright pull through a 5/8 loop into a 45° downline, perform a ½ roll, pull through a 1/8 loop, exit upright.

A-16.17 Avalanche

From upright, pull through a loop while performing a snap-roll on top, exit upright.

PRELIMINARY SCHEDULE P-19 (2018-2019)**P-19.01 Triangle loop with ½ roll, consecutive two ¼ rolls, consecutive two ¼ roll, ½ roll**

From upright, perform a ½ roll in the centre, push through a 3/8 loop into a 45° upline, perform consecutively two ¼ rolls, pull through ¼ loop into a 45° downline, perform consecutively two ¼ rolls, push through a 3/8 loop, perform a ½ roll in the centre, exit upright.

P-19.02 Figure Et with consecutive two ½ rolls in opposite directions, consecutive four 1/8 rolls

From upright, pull through a 1/8 loop into a 45° upline, perform consecutively two ½ rolls in opposite directions pull through a 5/8 loop into a vertical downline, perform consecutively four 1/8 rolls, pull through a ¼ loop, exit upright.

P-19.03 Cuban 8 with snap-roll, snap-roll

From upright, pull through a 5/8 loop into a 45° downline, perform a snap-roll, push through a ¾ loop into a 45° downline, perform a snap-roll pull through a 1/8 loop, exit upright.

P-19.04 Half square loop with ½ roll

From upright, pull through a ¼ loop into a vertical upline, perform a ½ roll, push through a ¼ loop, exit upright.

P-19.05 Reverse Cobra Roll with roll, consecutive two ¼ rolls

From upright, push through a 1/8 loop into a 45° downline, perform a roll, pull through a ¼ loop into a 45° upline, perform consecutively two ¼ rolls, pull through a 1/8 loop, exit inverted.

P-19.06 Inverted Spin with two turns

From inverted, perform an inverted spin with two turns, perform a vertical downline, pull through a ¼ loop, exit upright.

cont/ ...

P-19.07 Figure 9 with $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{2}$ roll, push through a $\frac{3}{4}$ loop, exit inverted.

P-19.08 Push-Push-Push Humpy-Bump with consecutive two $\frac{1}{4}$ rolls in opposite directions, consecutive two $\frac{1}{2}$ rolls (Option: with $\frac{1}{4}$ roll, consecutive $\frac{1}{2}$ roll, $\frac{1}{4}$ roll in opposite directions, $\frac{1}{4}$ roll)

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform consecutively two $\frac{1}{4}$ rolls, push through a $\frac{1}{2}$ loop into a vertical downline, perform consecutively two $\frac{1}{2}$ rolls, in opposite directions, push through a $\frac{1}{4}$ loop, exit inverted.

Option: From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{4}$ roll, push through a $\frac{1}{2}$ loop into a vertical downline, perform consecutively a $\frac{1}{2}$ roll, $\frac{1}{4}$ roll in opposite directions, push through a $\frac{1}{4}$ loop, exit inverted.

P-19.09 Stall Turn with roll, consecutive three $\frac{1}{4}$ rolls, $\frac{3}{4}$ roll

From Inverted, perform a roll, push through a $\frac{1}{4}$ loop into a vertical upline, perform consecutively three $\frac{1}{4}$ rolls, perform a stall turn into a vertical downline, perform a $\frac{3}{4}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

P-19.10 Half Reverse Cuban 8 with roll

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, perform a roll, pull through a $\frac{5}{8}$ loop, exit upright.

P-19.11 Knife-Edge flight with 1 $\frac{1}{4}$ roll, 1 $\frac{1}{4}$ roll

From upright, perform a 1 $\frac{1}{4}$ roll, perform a knife-edge flight, perform a 1 $\frac{1}{4}$ roll exit upright.

P-19.12 Immelman Turn with $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{2}$ loop, perform a $\frac{1}{2}$ roll, exit upright

P-19.13 Loop with two $\frac{1}{2}$ rolls integrated

From upright, push through a loop while integrating a $\frac{1}{2}$ roll in the first 90° and another $\frac{1}{2}$ roll in the last 90° , exit upright.

P-19.14 Half Square Loop on Corner with $\frac{1}{2}$ roll

From upright, push through a $\frac{1}{8}$ loop into a 45° downline, push through a $\frac{1}{4}$ loop into a 45° downline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{8}$ loop, exit upright.

P-19.15 Double Key with roll, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll, roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a roll, pull through a $\frac{5}{8}$ loop into a 45° downline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{4}$ loop into a 45° upline, perform a $\frac{1}{2}$ roll, pull through a $\frac{5}{8}$ loop into a vertical downline, perform a roll, pull through a $\frac{1}{4}$ loop, exit upright.

P-19.16 Half Cuban 8 with consecutive two $\frac{1}{4}$ rolls

From upright, pull through a $\frac{5}{8}$ loop into a 45° downline, perform consecutively two $\frac{1}{4}$ rolls, exit upright.

P-19.17 Square Loop with, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll

From upright perform a square loop while performing a $\frac{1}{2}$ roll in each one leg, exit upright.

PRELIMINARY SCHEDULE P-17 (2016-2017)**P-17.01 Eye-Catcher with $\frac{1}{2}$ roll, $\frac{1}{2}$ roll**

From upright, perform a $\frac{1}{2}$ roll in the centre, push through a $\frac{3}{4}$ loop, pull through another $\frac{3}{4}$ loop, into a horizontal line, perform $\frac{1}{2}$ roll in the centre, exit upright.

P-17.02 Half Square Loop with $\frac{1}{2}$ roll

From upright, push through a $\frac{1}{4}$ loop into a vertical downline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{4}$ loop, exit upright.

cont/ ...

P-17.03 Knife-Edge Combination with $\frac{1}{4}$ roll, roll, $\frac{1}{4}$ roll

From upright, perform a $\frac{1}{4}$ roll, perform a sustained knife-edge flight, a roll in opposite direction, another sustained knife-edge flight, a $\frac{1}{4}$ roll in opposite direction, exit inverted.

P-17.04 Stall Turn with two consecutive $\frac{1}{4}$ rolls

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform two consecutive $\frac{1}{4}$ rolls perform a stall turn into a vertical downline, pull through a $\frac{1}{4}$ loop, exit upright.

P-17.05 Humpty-Bump with $\frac{3}{4}$ roll, $\frac{1}{2}$ knife-edge loop, $\frac{3}{4}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{3}{4}$ roll, perform a $\frac{1}{2}$ loop in knife-edge flight into a vertical downline, perform a $\frac{3}{4}$ roll, pull through a $\frac{1}{4}$ loop, exit upright.

P-17.06 Comet with two consecutive $\frac{1}{4}$ rolls, $\frac{1}{2}$ roll

From upright, perform a $\frac{1}{8}$ loop into a 45° upline, perform two consecutive $\frac{1}{4}$ rolls, pull through a $\frac{3}{4}$ loop into another 45° upline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{8}$ loop, exit inverted.

P-17.07 Six-sided Loop with two consecutive $\frac{1}{4}$ rolls, roll, two consecutive $\frac{1}{4}$ rolls

From inverted, pull through a $\frac{1}{6}$ loop into a 60° downline, perform two consecutive $\frac{1}{4}$ rolls, push through a $\frac{1}{6}$ loop into another 60° downline, push through a $\frac{1}{6}$ loop into a horizontal line, perform a roll, push through a $\frac{1}{6}$ loop into a 60° upline, push through a $\frac{1}{6}$ loop into another 60° upline, perform two consecutive $\frac{1}{4}$ rolls, pull through a $\frac{1}{6}$ loop, exit inverted.

P-17.08 Split S Reverse Immelmann Combination with two $\frac{1}{2}$ rolls, two $\frac{1}{2}$ rolls

From inverted, perform two consecutive $\frac{1}{2}$ rolls in opposite direction, immediately pull through a $\frac{1}{2}$ loop, immediately perform two consecutive $\frac{1}{2}$ rolls, exit upright.

P-17.09 Figure S with $\frac{1}{2}$ roll integrated

From upright pull through a $\frac{1}{2}$ loop and push through another $\frac{1}{2}$ loop, while performing a $\frac{1}{2}$ roll integrated in the second $\frac{1}{2}$ loop, exit inverted.

P-17.10 Spin with three turns, $\frac{1}{2}$ roll

From inverted, perform an inverted spin with 3 turns, perform a vertical downline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

P-17.11 45° Upline with consecutively $\frac{1}{2}$ roll, roll, $\frac{1}{2}$ roll.

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, perform consecutively a $\frac{1}{2}$ roll, a roll, a $\frac{1}{2}$ roll in opposite directions, pull through a $\frac{1}{8}$ loop, exit inverted.

P-17.12 Reverse Pull-Pull-Push-Humpty-Bump with roll (Option: with $\frac{1}{4}$ roll, $\frac{3}{4}$ roll)

From inverted, pull through a $\frac{1}{4}$ loop into a vertical downline, perform a roll, pull through a $\frac{1}{2}$ loop into a vertical upline, push through a $\frac{1}{4}$ loop, exit upright.

Option: From inverted, pull through a $\frac{1}{4}$ loop into a vertical downline, perform a $\frac{1}{4}$ roll, pull through a $\frac{1}{2}$ loop into a vertical upline, perform a $\frac{3}{4}$ roll, push through a $\frac{1}{4}$ loop, exit upright.

P-17.13 Triangle Loop with two consecutive $\frac{1}{4}$ rolls, two consecutive $\frac{1}{4}$ rolls, four consecutive $\frac{1}{4}$ rolls

From upright, push through a $\frac{3}{8}$ loop into a 45° downline, perform two consecutive $\frac{1}{4}$ rolls in opposite direction, push through a $\frac{1}{4}$ loop into a 45° upline, perform two consecutive $\frac{1}{4}$ rolls in opposite direction, push through a $\frac{3}{8}$ loop into a horizontal line, perform four consecutive $\frac{1}{4}$ rolls, exit upright.

P-17.14 Half Square Loop on Corner with $\frac{1}{2}$ roll

From upright, push through a $\frac{1}{8}$ loop into a 45° downline, push through a $\frac{1}{4}$ loop into another 45° downline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{8}$ loop, exit upright.

P-17.15 Roll Combination with consecutive $\frac{1}{2}$ roll, snap roll, $\frac{1}{2}$ roll

From upright, perform consecutively a $\frac{1}{2}$ roll, a snap-roll, a $\frac{1}{2}$ roll, exit upright.

P-17.16 Half Cuban 8 with consecutive two $\frac{1}{4}$ rolls

From upright pull through a $\frac{5}{8}$ loop into a 45° downline, perform two consecutive $\frac{1}{4}$ rolls, pull through a $\frac{1}{8}$ loop, exit upright.

cont/ ...

P-17.17 Loop with roll integrated

From upright, pull through a loop while performing a roll integrated in the top 180° of the loop, exit upright.

FINAL SCHEDULE F-19 (2018-2019)**F-19.01 Square Loop with ½ roll integrated, ½ roll integrated, ½ roll integrated, ½ roll integrated**

From upright, perform a square loop while performing a ½ roll integrated in each corner, exit upright.

F-19.02 Figure 9 with two rolls

From upright, pull through a ¼ loop into a vertical upline, perform two rolls, push through a ¾ loop, exit inverted.

F-19.03 Vertical 8 with roll integrated

From inverted, pull through a loop, pull through another loop while performing a roll integrated in the last 90° of the first loop and in the first 90° of the second loop, exit inverted.

F-19.04 Stall Turn with consecutive ½ rolls in opposite directions

From inverted, push through a ¼ loop into a vertical upline, perform a stall turn in a vertical downline, perform consecutively two ½ rolls in opposite directions, push through a ¼ loop, exit inverted.

F-19.05 Push-Knife-Edge-Push Humpty-Bump with 1 ¼ snap-roll, 1 ¼ snap-roll

From inverted, push through a ¼ loop into a vertical upline, perform a 1 ¼ snap-roll, perform a ½ knife-edge loop into a vertical downline, perform a 1 ¼ snap-roll, push through a ¼ loop, exit inverted.

F-19.06 Shark Fin with four consecutive ¼ rolls, ½ roll

From inverted, push through a 1/8 loop into a 45° upline, perform consecutively four ¼ rolls, pull through a 3/8 loop into a vertical downline, perform a ½ roll, push through a ¼ loop, exit inverted.

F-19.07 Roll Combination with four 1/8 rolls, four 1/8 rolls in opposite direction

From inverted, perform consecutively four 1/8 rolls and four 1/8 rolls in opposite direction, exit inverted.

F-19.08 Top Hat with two consecutive ¼ rolls, roll

From inverted, push through a ¼ loop into a vertical upline, perform consecutively two ¼ rolls, pull through a 1/4 loop into inverted flight, pull through a ¼ loop into a vertical downline, perform a roll, push through a ¼ loop, exit inverted.

F-19.09 Two Horizontal Circles with ½ roll to the inside integrated, roll integrated in opposite direction, ½ roll integrated in opposite direction

From Inverted, perform two horizontal circles with a ½ roll to the inside integrated in the first 180°, a roll integrated in the following 360° in opposite direction, a ½ roll integrated in the final 180° in opposite direction, exit inverted.

F-19.10 Trombone with roll

From inverted, push through a 1/8 loop into a 45° upline, perform a roll, pull or push through a ½ loop into a 45° downline, pull through a 1/8 loop, exit upright.

F-19.11 Double Fighter Turn with ¾ roll, ¾ roll

From upright, pull through a 1/8 loop into a 45° upline, perform a ¾ roll, push through a ½ knife-edge circle into a 45° downline, perform a ¼ knife-edge loop into a 45° upline, push through a ½ knife-edge circle into a 45° downline, perform a ¾ roll, push through a 1/8 loop, exit inverted.

F-19.12 Inverted Figure Et with ½ roll, roll

From inverted, push through a 1/8 loop into a 45° upline, perform a ½ roll, push through a 7/8 loop into a vertical upline, perform a roll, pull through a ¼ loop, exit inverted.

cont/ ...

F-19.13 Inverted Spin with two turns, two consecutive $\frac{1}{4}$ rolls

From inverted, perform an inverted spin with two turns, perform a vertical downline, perform consecutively two $\frac{1}{4}$ rolls, pull through a $\frac{1}{4}$ loop, exit upright.

F-19.14 Pull-Push-Pull Humpty-Bump with snap-roll, $\frac{1}{2}$ roll (Option: with 1 $\frac{1}{4}$ snap-roll, $\frac{3}{4}$ roll)

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a snap-roll, push through a $\frac{1}{2}$ loop into a vertical downline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{4}$ loop, exit upright.

Option: From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a 1 $\frac{1}{4}$ snap-roll, push through a $\frac{1}{2}$ loop into a vertical downline, perform a $\frac{3}{4}$ roll, pull through a $\frac{1}{4}$ loop, exit upright.

F-19.15 Roll Combination with consecutive two $\frac{1}{8}$ rolls, roll in opposite direction, consecutive two $\frac{1}{8}$ rolls in opposite direction

From upright, perform consecutively two $\frac{1}{8}$ rolls, a roll in opposite direction, two $\frac{1}{8}$ rolls in opposite direction, exit inverted.

F-19.16 Half Loop with two $\frac{1}{2}$ rolls in opposite directions integrated

From inverted, push through a $\frac{1}{2}$ loop while performing a $\frac{1}{2}$ roll integrated in the first 90° and a $\frac{1}{2}$ roll in opposite direction integrated in the second 90° , exit upright

F-19.17 45° Downline with consecutive $\frac{1}{2}$ roll, two snap-rolls in opposite directions, $\frac{1}{2}$ roll

From upright, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{8}$ loop into a 45° downline, perform consecutively two snap-rolls in opposite directions, push through a $\frac{1}{8}$ loop, perform a $\frac{1}{2}$ roll, exit upright.

FINAL SCHEDULE F-17 (2016-2017)**F-17.01 Triangle with two consecutive $\frac{1}{4}$ rolls, two consecutive rolls, two consecutive $\frac{1}{4}$ rolls**

From upright, pull through a $\frac{3}{8}$ loop into a 45° upline, perform two consecutive $\frac{1}{4}$ rolls, pull through a $\frac{3}{8}$ loop into a horizontal line, perform two consecutive rolls in opposite direction, pull through a $\frac{3}{8}$ loop into a 45° downline, perform two consecutive $\frac{1}{4}$ rolls, pull through a $\frac{3}{8}$ loop, exit upright.

F-17.02 Turnaround-Avalanche with snap-roll

From upright, pull through a $\frac{1}{4}$ loop, push through a $\frac{3}{4}$ loop while performing a snap-roll on top, exit inverted.

F-17.03 Roll Combination with consecutive $\frac{1}{2}$ roll, two 1 $\frac{1}{4}$ snap-rolls, $\frac{1}{2}$ roll

From inverted, perform consecutively a $\frac{1}{2}$ roll, a 1 $\frac{1}{4}$ snap-roll, a 1 $\frac{1}{4}$ snap-roll in opposite direction, a $\frac{1}{2}$ roll, exit inverted.

F-17.04 Half Square Loop with two consecutive $\frac{1}{4}$ rolls, two consecutive $\frac{1}{4}$ rolls

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform two consecutive $\frac{1}{4}$ rolls, perform two consecutive $\frac{1}{4}$ rolls in opposite direction, push through a $\frac{1}{4}$ loop, exit upright.

F-17.05 Two Loops with rolls integrated

From upright, push through a loop while performing a roll integrated, push through another loop, while performing a roll integrated in opposite direction, exit upright.

F-17.06 Half Square Loop with consecutive roll, $\frac{1}{2}$ roll

From upright, push through a $\frac{1}{4}$ loop into a vertical downline, perform consecutively a roll, a $\frac{1}{2}$ roll in opposite direction, pull through a $\frac{1}{4}$ loop, exit upright.

F-17.07 Barrel-Roll

From upright, pull through a $\frac{1}{8}$ loop into a 45° upline, perform a barrel-roll with 45° spiral pitch, perform a 45° upline, push through a $\frac{1}{8}$ loop, exit upright.

F-17.08 Knife-Edge Split S Reverse Immelmann Combination with $\frac{1}{4}$ roll, $\frac{3}{4}$ roll

From upright, perform a $\frac{1}{4}$ roll, immediately perform a $\frac{1}{2}$ knife-edge loop down, immediately perform a $\frac{3}{4}$ roll, exit inverted.

cont/ ...

F-17.09 Horizontal Double Immelmann Circle with $\frac{1}{4}$ roll, $\frac{1}{2}$ roll integrated, 1 $\frac{1}{2}$ snap-roll, $\frac{1}{2}$ roll integrated, 1 $\frac{1}{2}$ snap-roll, $\frac{1}{4}$ roll

From inverted, perform a $\frac{1}{4}$ roll in the centre into a sustained knife-edge flight, perform a $\frac{1}{2}$ circle while performing a half roll to the outside integrated, immediately followed by a 1 $\frac{1}{2}$ snap roll in opposite direction, perform a sustained knife-edge flight, perform a $\frac{1}{2}$ circle while performing a $\frac{1}{2}$ roll to the outside integrated, immediately followed by a 1 $\frac{1}{2}$ snap-roll in opposite direction, perform a sustained knife-edge flight, perform a $\frac{1}{4}$ roll in the centre, exit inverted.

F-17.10 Figure 6 with stall turn, roll

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a stall turn into a vertical downline, perform a roll, pull through a $\frac{3}{4}$ loop, exit inverted.

F-17.11 Inverted Top Hat with $\frac{1}{4}$ roll, roll, $\frac{1}{4}$ roll

From inverted, pull through a $\frac{1}{4}$ loop into a vertical downline, perform $\frac{1}{4}$ roll, perform a $\frac{1}{4}$ knife-edge loop into a sustained knife-edge flight, perform a roll, perform a $\frac{1}{4}$ knife-edge loop into a vertical upline, perform a $\frac{1}{4}$ roll, push through a $\frac{1}{4}$ loop, exit upright.

F-17.12 Figure 9 with consecutive $\frac{1}{2}$ roll, roll

From upright, pull through a $\frac{3}{4}$ loop into a vertical downline, perform consecutively a $\frac{1}{2}$ roll, a roll in opposite direction, pull through a $\frac{1}{4}$ loop, exit upright.

F-17.13 Big-M with two consecutive $\frac{1}{4}$ rolls, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll integrated, $\frac{1}{2}$ roll, two consecutive $\frac{1}{4}$ rolls

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform two consecutive $\frac{1}{4}$ rolls, perform a $\frac{1}{2}$ knife-edge loop into a vertical downline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{2}$ loop into a vertical upline while performing a $\frac{1}{2}$ roll integrated, perform a $\frac{1}{2}$ roll, perform a $\frac{1}{2}$ knife-edge loop into a vertical downline, perform two consecutive $\frac{1}{4}$ rolls, push through a $\frac{1}{4}$ loop, exit inverted.

F-17.14 Half Square Knife-Edge Loop on Corner with $\frac{1}{4}$ roll, $\frac{1}{4}$ roll

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, perform a $\frac{1}{4}$ roll, perform a $\frac{1}{4}$ knife-edge loop into a 45° upline, perform a $\frac{1}{4}$ roll, push through a $\frac{1}{8}$ loop, exit upright.

F-17.15 Figure Z with snap-roll, consecutive $\frac{1}{2}$ roll, roll, $\frac{1}{2}$ roll, snap-roll

From upright, perform a snap-roll in the centre, push through a $\frac{3}{8}$ loop into a 45° downline, perform consecutively a $\frac{1}{2}$ roll, roll, $\frac{1}{2}$ roll in opposite directions, pull through a $\frac{3}{8}$ loop, perform a snap-roll in the centre, exit upright.

F-17.16 Clown Dance with $\frac{1}{2}$ roll integrated, spin 2 turns, $\frac{1}{2}$ roll

From upright pull through a $\frac{1}{2}$ loop while performing a $\frac{1}{2}$ roll integrated, perform a spin with 2 turns, perform a vertical downline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

F-17.17 Knife-Edge Loop with consecutive eight $\frac{1}{8}$ rolls integrated

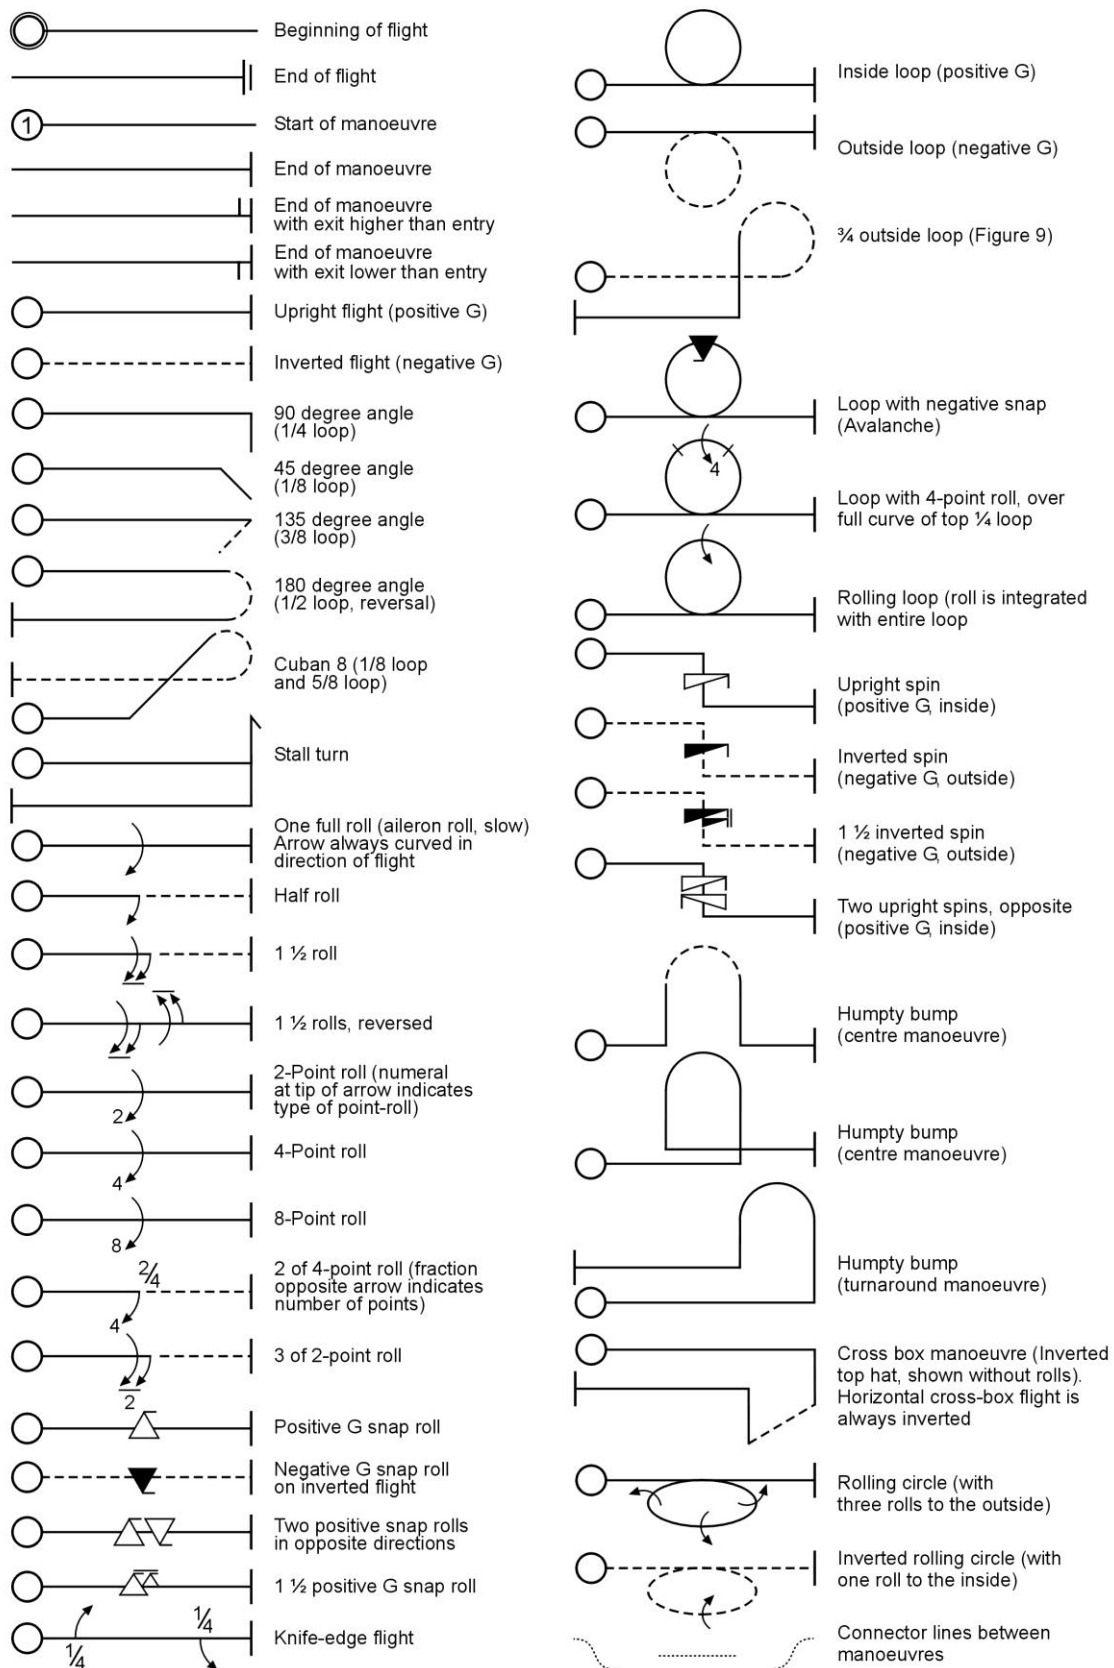

From inverted, perform a $\frac{1}{4}$ roll, perform a knife-edge loop while performing consecutively eight $\frac{1}{8}$ rolls integrated in the top 180° , perform a $\frac{1}{4}$ roll, exit upright.

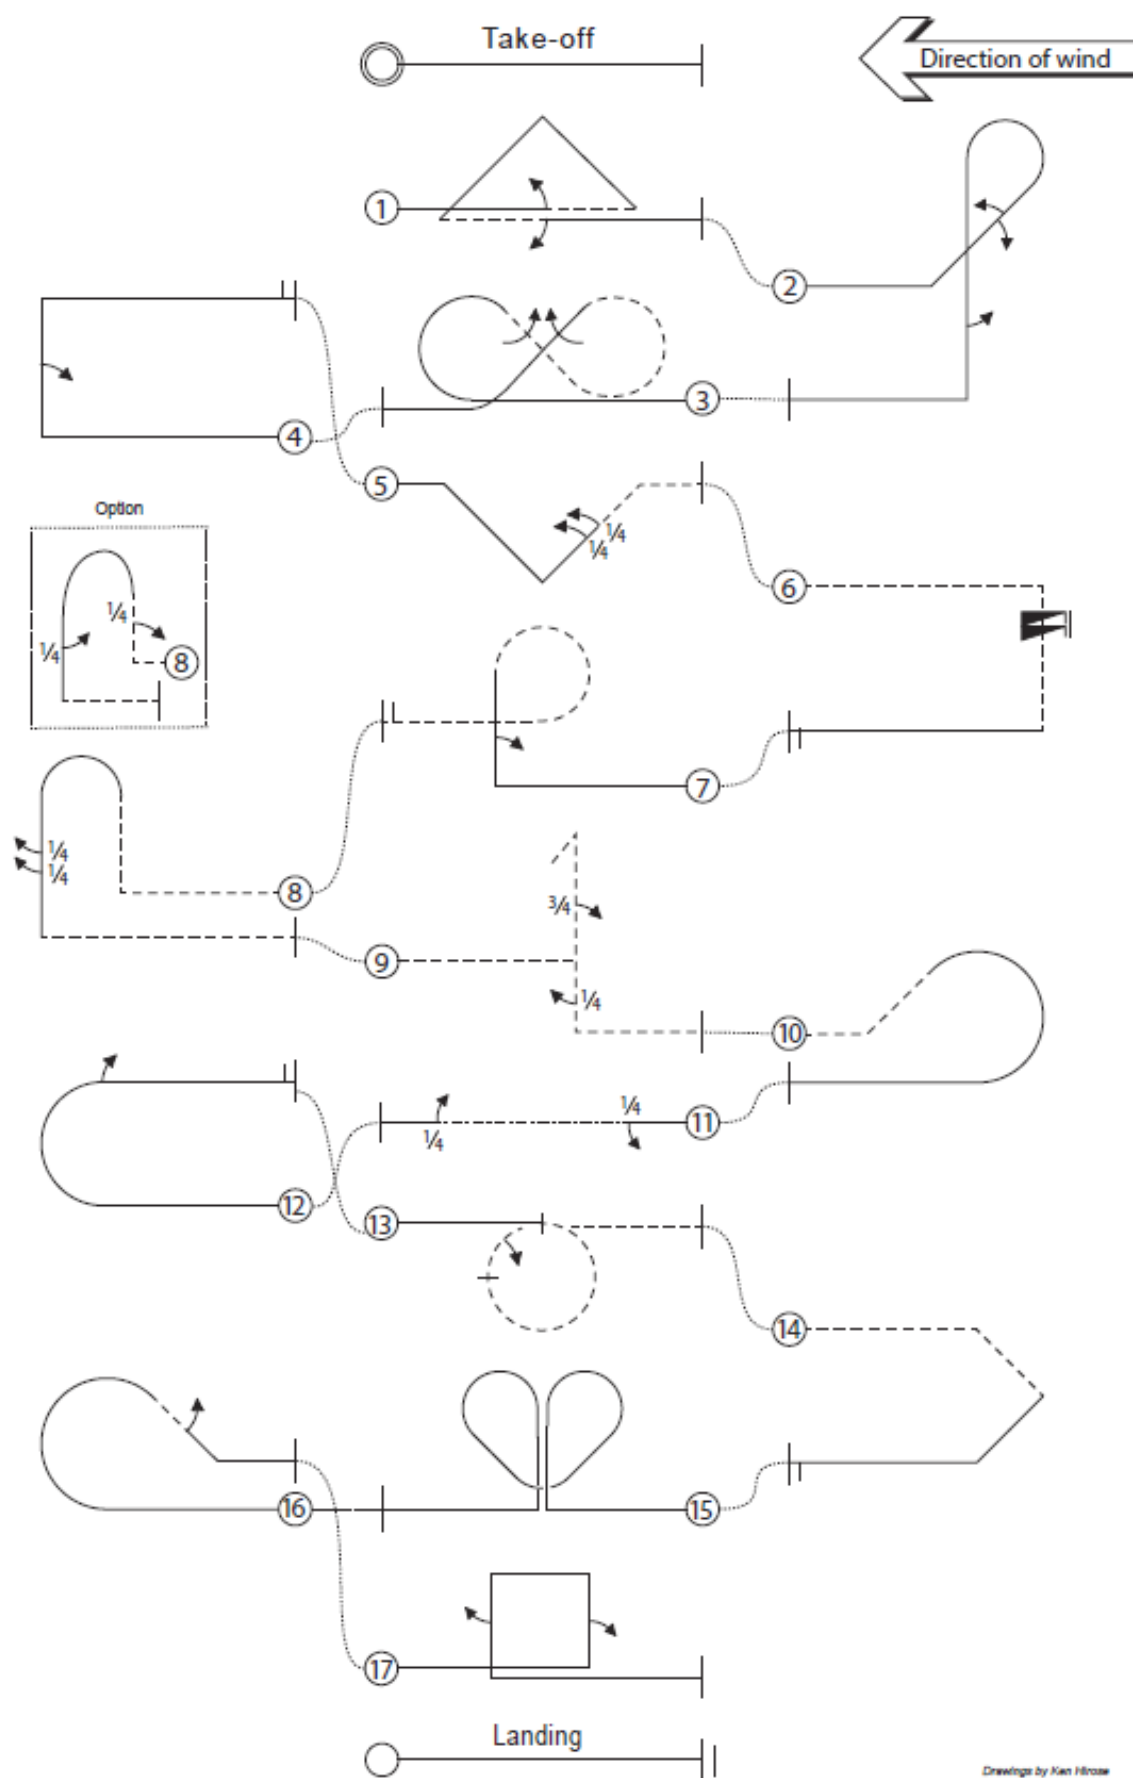

For the Manoeuvre Execution Guide, see Annex 5B.

FINAL SCHEDULE F-19 (2018-2019)

FINAL SCHEDULE F-17 (2016-2017)

ANNEX 5B

F3 R/C AEROBATIC POWER MODEL AIRCRAFT MANOEUVRE EXECUTION GUIDE

5B.1. PURPOSE

The purpose of the Manoeuvre Execution Guide is to give accurate guidelines for the proper execution of aerobatic manoeuvres to both judges and competitors.

Note that this guide may not be all-inclusive.

5B.2. GENERAL

The flight path of a model aircraft is used to judge the shape of all manoeuvres, and manoeuvres must be entered and exited with straight and level upright or inverted flight of recognisable length. Centre manoeuvres start and finish on the same heading, while turn-around manoeuvres finish on a heading 180 degrees to entry. When appropriate, entry and exit of centre manoeuvres must be at the same altitude, unless specified otherwise. Positioning adjustments in altitude are allowed in turn-around manoeuvres.

5B.3. ACCURATE AND CONSISTENT JUDGING

The most important aspect of consistent judging is for each judge to establish his standard and then maintain that standard throughout the competition. It is advisable for the jury president, in conjunction with the contest director and the championship organiser to hold a conference prior to the start of the competition, in order to discuss judging and make the standards as uniform as possible. This is further augmented by some practice flights which all judges score simultaneously and privately. After these flights, the defects in each manoeuvre should be discussed by all judges and agreement reached about the severity of the defects. Once the contest is started, the individual judge must not alter his standard under any influence.

An accurate standard of judging is also very important. Being a consistent judge, whether high or low, is not good if the scores awarded are not a fair reflection of the manoeuvre performed.

A judge must not, under any circumstances, favour a competitor, or a national team, or a particular flying style, or brand of equipment, or propulsion method. Judges must only look at the lines described in the sky. Conversely, acts of negative bias towards a competitor, or a national team, or a flying style, or brand of equipment, or a propulsion method, must be viewed in a serious light, and corrective action may be necessary.

The performance of the model aircraft or its propulsion device must not be allowed to influence a judge's mark.

5B.4. PRINCIPLES

The principles of judging the performance of a competitor in a R/C Aerobatic competition is based on the perfection with which the competitor's model aircraft executes the aerobatic manoeuvres as described in Annex 5A. The main principles used to judge the degree of perfection are:

1. Geometrical accuracy of the manoeuvre; (weighting approximately 50%).
2. Smoothness and gracefulness of the manoeuvre; (weighting approximately 25%).
3. Positioning of the manoeuvre within the manoeuvring zone; (weighting approximately 12,5%).
4. Size of the manoeuvre; (weighting approximately 12,5%).
5. Proportion of the manoeuvre outside of the manoeuvring zone (in addition to the above).

5B.5. DOWNGRADING SYSTEM FOR JUDGING MANOEUVRES

In Annex 5A a description of each manoeuvre is given. With reference to above principles each manoeuvre must be downgraded according to:

1. The type of defect.
2. The severity of the defect.
3. The number of times any one defect occurs, as well as the total number of defects.

Each judge gives a mark for each manoeuvre during a flight. Assuming the highest mark 10 at the start of each manoeuvre, every defect is subject to downgrade of the mark in whole numbers (or in half numbers for slight defects, but in sum resulting in up-rounded whole numbers). A high score should remain only if no substantial, severe or multiple defects are found.

5B.6. ATTITUDE AND FLIGHT PATH

The flight path of a model aircraft is the trajectory of its centre of gravity. The attitude is the direction of the fuselage centre-line in relation to the flight path.

If not otherwise stated, all judging is based on flight path.

5B.7. WIND CORRECTION

All manoeuvres are required to be wind corrected in such a way that the shape of the manoeuvre, as described in Annex 5A, is preserved in the model aircraft's flight path. The exceptions to this criterion are in the snap-rolls, stall turns, and spins, where the model aircraft is in a stalled condition.

5B.8. 1. GEOMETRICAL ACCURACY OF THE MANOEUVRE

As a guide for downgrading deviations from the defined manoeuvre geometry, the manoeuvres are divided into their different components: lines, loops, rolls, snap-rolls, horizontal circles, line/loop/roll/horizontal circle combinations, stall turns, and spins.

5B.8.2. THE 1 POINT PER 15 DEGREE RULE

This basic rule provides a general guide for downgrading deviations from defined manoeuvre geometry.

1 point must be subtracted for each approximate 15 degrees deviation. In general, lines must be judged more critically than deviations in yaw or roll.

5B.8.3. LINES

All aerobatic manoeuvres are entered and exited by a horizontal line of recognisable length. When no horizontal line is flown between two manoeuvres, the just-completed manoeuvre must be downgraded by 1 point and the upcoming manoeuvre must be downgraded by 1 point. Horizontal flying between manoeuvres which is not considered part of the exit or entry line, must be observed, but not judged for quality.

The total length of a vertical or up/downline, as dictated by the performance of the model aircraft, is not a downgrading criterion.

All lines within a manoeuvre have a start and an end which define their length. They are preceded and followed by part loops. The length of a line should only be graded when a manoeuvre contains more than one line with a given relationship to each other ie as in a square loop. If there is a minor deviation in the relationship then 1 point is subtracted, and more points are subtracted for greater deviations.

5B.8.4. LOOPS

A loop must have by definition, a constant radius, and must be performed in the vertical plane throughout. It is entered and exited by a well-defined line which, for a complete loop, is horizontal. For a part-loop, however, such lines may be in any other plane of flight as required by the particular manoeuvre.

Loops and part-loops within one manoeuvre must have the same radius. Each occurrence of a slight difference in radius must downgrade the manoeuvre by 1 point, while more severe deviations may downgrade it by 2 or 3 points for each occurrence. The radius of the first loop or part-loop, determines the radii of subsequent loops or part-loops within one manoeuvre.

Every loop or part-loop must be performed without interruption to the circular flight path. Every visible segmentation must be downgraded by 1 point.

If the loop is not performed entirely in the vertical plane ie it drifts closer or further from the judges, minor drift must be downgraded by 1 point, while more severe drift must be downgraded by several points.

In three-, four-, six-, and eight-sided loops, the main criteria are that the loop must have the sides at the same lengths/correct angles for the defined number of times, and all part-loops must have the same radius.

5B.8.5. ROLLS

Rolls and part-rolls may be performed as individual manoeuvres, or as parts of other manoeuvres. The following applies to all continuous rolls and part-rolls as well as to consecutive continuous rolls and part-rolls:

- a) They must be performed on a constant flight path.

cont/...

- b) The roll-rate must be constant. Small variations in roll-rate must be downgraded by 1 point, while more severe variations must receive a downgrade of 2 or more points. Slowing down (or speeding up) the roll-rate towards the end of a roll must be downgraded using the 1 point per 15 degree rule.
- c) The start and stop of the rotation must be crisp and well-defined. If a start or stop is badly defined, 1 point is subtracted for each.
- d) In all manoeuvres which have more than one continuous roll, the continuous rolls must have the same roll-rate. In all manoeuvres which have more than one part-roll, the part-rolls must have the same roll rate. Lines between consecutive part-rolls must be short and of equal length. Between consecutive continuous rolls or part-rolls in opposite direction there must be no line. Where there are continuous rolls and part-rolls within one manoeuvre, the roll-rate for the part-rolls does not necessarily have to be the same as the roll-rate for the continuous rolls.

Particular attention has to be paid where the manoeuvre description requires continuous rolls or part-rolls to be performed in opposite directions. For a roll or part-roll performed in the wrong direction, a zero score must be given for the entire manoeuvre.

5B.8.6. **BARREL-ROLLS**

A barrel-roll is a roll, whose flight path goes in a spiral around the virtual hull of a cylinder. Barrel rolls are judged in the same way as axial rolls as far as the constant flight path throughout the roll, the start and stop of the rotation, and the roll direction is concerned.

5B.8.7. **SNAP-ROLLS**

A snap-roll is a rapid auto-rotative roll where the model aircraft is in a stalled attitude, with a continuous high angle of attack.

Snap-rolls are judged in the same way as axial rolls as far as the constant flight path throughout the snap-roll, the start and stop of the rotation, and the roll direction is concerned.

At the start of a snap-roll, the fuselage attitude must show a definite stall-break and attitude separation from the flight path, before the rotation is started, since the model aircraft is supposed to be in a stalled condition throughout the snap-roll. If the stall-break does not occur and the model aircraft barrel-rolls around, the manoeuvre must be severely downgraded (more than 5 points). Similarly, axial rolls disguised as snap-rolls must be severely downgraded (more than 5 points).

Snap-rolls can be flown in both positive and negative attitudes. The attitude (positive or negative) is at the pilot's discretion. If the model aircraft returns to an unstalled condition during the snap-roll, the manoeuvre is downgraded using the 1 point per 15 degree rule.

5B.8.8. **TORQUE-ROLLS**

A torque-roll is a roll, which is executed while the model aircraft is hovering in a vertical attitude and in a fixed position at no flying speed. If the torque-roll is not performed stationary and/or the fixed position is not maintained in all directions, it must be downgraded by 1 point or more, depending on the severity of the defect(s). Absence of a hover must be zeroed. Otherwise torque-rolls are judged the same way as axial rolls as far as the roll rates, the start and stop of the rotation and the roll direction is concerned.

5B.8.9. **HORIZONTAL CIRCLES**

Horizontal circles are performed in a horizontal plane and mostly used as centre manoeuvres. They may be positioned at a higher or lower altitude. Horizontal circles are mainly judged about the circular flight path, constant altitude of the circle, and by constant rates of roll, and integration of the continuous rolls or part-rolls with the circle, if applicable.

The circular flight path should be maintained throughout the manoeuvre and there must be no deviation in altitude. At low level it may be more difficult for judges to determine the roundness of the circle. The 150m distance requirement is waived for horizontal circles, and a downgrade should only be applied if the far side of the circle exceeds approximately 350m. Deviations from geometry should be downgraded as in loops and using the 1 point per 15 degree rule. Depending on the distance from the pilot at the entry, horizontal circles may be performed away from, or towards, the pilot and are at the pilot's discretion.

Other horizontal manoeuvres as combinations of horizontal circles or part-circles with lines etc have to be judged accordingly

5B.8.10. **LINE/LOOP/ROLL/HORIZONTAL CIRCLE COMBINATIONS**

These are much diversified, but all are combinations of lines, loops, part-loops, continuous rolls, part-rolls, snap-rolls, horizontal circles, and horizontal part-circles. The judging of all these components applies as described above.

Whenever a continuous roll, part-roll, snap roll, or a consecutive combination of these is placed on a line, the length of the line before and after the roll or the combination of consecutive rolls must be equal.

1 point is subtracted for a minor difference, and 2 points for a major difference. If there is a complete absence of a line before or after the roll, 3 points are subtracted.

Exceptions are all Immelman Turn and Split-S manoeuvres where rolls are always performed immediately before or after or part-loop, which means, the rolls always begin with the start of the lines and stop with the end of the lines. A visible line in-between the two components or rolls and not completely before or after the part-loop, must downgrade the manoeuvre.

Flight paths of continuous rolls or part-rolls that are integrated with loops or horizontal circles should be smooth, continuous, and of constant radius. Where an integrated roll is required, quick-rolling should be downgraded using the 1 point per 15 degree rule.

Particular attention has to be paid where the manoeuvre description requires a continuous roll or part-roll to be performed to the inside or the outside of a horizontal circle. For a continuous roll or part-roll performed in the wrong direction, a zero must be given for the manoeuvre.

5B.8.11. **STALL-TURNS**

The criteria in this manoeuvre are mainly about lines. The lines must have exactly vertical and horizontal flight paths.

The model aircraft comes to a stop in forward movement and then must pivot around its centre of gravity (CG) in the yaw axis for the manoeuvre to receive a high score. If the model aircraft does not pivot on the CG, but within a radius of a half-wingspan, one point is subtracted. For a radius of pivot up to one wingspan, 2 to 3 points are subtracted and if the radius exceeds 1½ wingspans, the manoeuvre must be downgraded 4 to 5 points. A radius of pivot of 2 wingspans or more is considered a wing-over and a zero must be given. If the model aircraft should “torque-off” during the stall turn, a downgrade must be applied using the 1 point per 15 degree rule. If the model aircraft flops forward or backward in a stall turn, a zero score must be given.

If the model aircraft shows a pendulum movement after the pivot, the manoeuvre is downgraded by

1 point. Similarly, if the model aircraft should “skid” before reaching the stall turn (early application of rudder), the manoeuvre is downgraded by 1 point. Drift of the model aircraft during the stalled condition must be ignored, provided the model aircraft does not drift outside the manoeuvring zone.

5B.8.12. **SPINS**

All spins are entered and exited with horizontal lines. In order to spin, the model aircraft must be stalled. The entry is flown in a horizontal flight path with the nose-up attitude increasing as the speed decreases. Drift of the model aircraft from the flight path at this point should not be downgraded, since it is in a near-stalled condition. However, severe yawing or weathercocking during the near-stalled condition, should be downgraded by 1 point per 15 degrees. A climbing flight path just prior to the spin must be downgraded, using the 1 point per 15 degree rule. The nose then drops as the model aircraft stalls. Simultaneously as the nose drops, the wing also drops in the direction of the spin. Drift during the rotation of the spin should not be downgraded since the model aircraft is in a stalled condition, provided the model aircraft does not drift outside the manoeuvring zone.

If the model aircraft does not stall or if the model aircraft is snap-rolled or spiral-dived into the spin, the manoeuvre is zeroed. If the model aircraft slides into the spin (is loath to spin), the manoeuvre must be downgraded by using the 1 point per 15 degree rule. Forcing the model aircraft to spin in the opposite direction as the initial rotation must be severely downgraded. Forcing the model aircraft to spin from a high angle of attack with down (or up) elevator, should be downgraded by 4 or 5 points. Judges must carefully observe the stalled attitude, which is not necessarily a complete stop, especially in no-wind conditions. This is no reason for downgrading.

After the defined number of turns, the stop of rotation is judged in the same manner as for a roll, downgraded 1 point per 15 degree deviation of heading. The spin rotation should stop parallel to the flight line. “Unloading”, or stopping the spin rotation early and then applying only aileron to roll the model aircraft to the desired attitude, should be downgraded using the 1 point per 15 degree rule.

A vertical downward line of visible length must be held after the rotation stops. The pull- or push-out is judged like a part-loop and if followed by a part-roll, should be separated by a well-defined line of straight flight. Different models spin in different attitudes, and the attitude is not to be taken into consideration, as long as the model aircraft is stalled. Any reversals in direction must be immediate, and if the model aircraft returns to an unstalled condition during the spin, the

manoeuvre is severely downgraded. The rate of rotation during a reversed spin may be slightly different, without a downgrade, but if the difference is significant, 1 point is subtracted.

5B.9. **SMOOTHNESS AND GRACEFULNESS OF THE MANOEUVRE**

Concerns the harmonic appearance of an entire manoeuvre. ie maintaining a constant flight speed throughout the various manoeuvre components, like in climbing and descending sections contributes significantly to smoothness and gracefulness. Radii performed very tight or very loose, though being of equal size within one manoeuvre may be subject for downgrading Smoothness and Gracefulness.

5B.10. **POSITIONING OF THE MANOEUVRE WITHIN THE MANOEUVRING ZONE**

The entire flight must be within the manoeuvring zone to avoid being penalised.

A centre manoeuvre must be flown so that it is centred on the centre line indicated by the centre flag. If the manoeuvre is flown off-centre, it must be downgraded according to the misplacement. This may be in the range of 1 to 4 points subtracted. The centre of a centre manoeuvre is in the middle between vertical limits left and right.

Flying so far out as to make evaluation of a manoeuvre difficult should be severely downgraded. The main criterion here is *visibility*. For a large, highly visible model aircraft, a line of flight approximately 175m in front of the pilot may be appropriate, while a smaller less visible model aircraft might have to be flown at say 140 to 150m. Manoeuvres performed on a line greater than approximately 175m in front of the pilot must be downgraded by at least 1 point.. Manoeuvres performed on a line greater than 200m in front of the pilot must be downgraded more severely (in the order of 2 to 3 points).

In general, turn-around manoeuvres are positioning manoeuvres. Therefore, entry and exit altitude need not be the same if the pilot wishes to make an altitude adjustment.

If any part of a manoeuvre is performed beyond the safety line, the manoeuvre will be zeroed. Repeated infringements of the safety line may result in the competitor being asked by the flight line director to terminate the flight, due to safety reasons.

5B.11. **SIZE OF THE MANOEUVRE**

The size of a manoeuvre is scored by its matching size relative to the size of the manoeuvring zone and relative to the size of the other manoeuvres performed throughout a schedule.

5B.12. **PROPORTION OF THE MANOEUVRE OUTSIDE OF THE MANOEUVRING ZONE**

Downgrades for flying a manoeuvre partially out of the zone should be in proportion to the degree of infraction, ie a small part of the manoeuvre (10%) flown past a 60 degree line would call for a downgrade of 1 point, while more of the manoeuvre (30%, 40%, 50% ...) flown past a 60 degree line must be downgraded accordingly by 3, 4, 5... points. If an entire manoeuvre including entry and exit is flown out of the manoeuvring zone, it consequently must be zeroed. However, violations of a 60 degree line that occur near the 150 metre line (ie approximately over a 60 degree flag) should be seen less severely than violations along a line further out and more distant from the judges.

5B.13. **EXAMPLES**

An avalanche is entered in a slight climb, the flight path turns 15 degrees to one side after the snap and a wing is 15 degrees low during the exit. $10 - 1 - 1 - 1 = 7$ points.

Consecutive four $\frac{1}{4}$ rolls are started late and end up slightly off-centre and there is no stop/line between the second $\frac{1}{4}$ roll and the third $\frac{1}{4}$ roll. $10 - 2 - 6$ (1 point per 15 degrees) = 2 points.

Consecutive eight $\frac{1}{8}$ rolls are started late and end up slightly off-centre, and there is no stop/line between the first $\frac{1}{8}$ roll and the second $\frac{1}{8}$ roll. $10 - 2 - 3 = 5$ points.

An Immelmann turn is not well-rounded, the half roll is started before the model aircraft reaches the top of the loop, with the wing 15 degrees low and the flight path of the model aircraft 20 degrees off heading. $10 - 1 - 2 - 1 - 2 = 4$ points.

A snap-roll on a 45 degree downline appears to be nothing more than an axial roll with a wiggle of the tail of the model aircraft. All other components are perfect. $10 - 6 = 4$ points.

During a humpty-bump, a snap roll on a vertical downline appears to be a barrel roll, and the exit radius is noticeably smaller in radius than the other two part-loops. $10 - 6 - 1 = 3$ points.

A square loop with half rolls has the first leg climbing 100 degrees. The model aircraft gallops in elevation across the top, stops the vertical downward half roll 15 degrees too early, is corrected, and the last half roll ends up 10 degrees to one side of the centre-line. $10 - 1 - 2 - 1 - 1 = 5$ points.

On a top hat with $\frac{1}{4}$ rolls, the model aircraft is accidentally rolled in the wrong direction and the horizontal flight is performed upright instead of inverted. $10 - 10 = 0$ points.

In the middle of a double Immelmann, which may be manoeuvre number 12, a competitor experiences an engine cut and the manoeuvre is not completed. $10 - 10 = 0$ points. The rest of the manoeuvres are also awarded zero points.

An otherwise flawless two-turn spin is about 45 degrees off-centre. This must be considered as a severe misplacement. $10 - 4 = 6$ points.

During a stall turn in dead-calm conditions, the flight path of the model aircraft is exactly vertical, but the model aircraft is “skidded” 15% in the upline to ensure a turn. The model aircraft shows a pendulum movement after the stall turn, and the half roll in the downline is performed directly before the part-loop exit. $10 - 1 - 1 - 3 = 5$ points.

A loop with an integrated roll on top has the roll performed rapidly with no attempt by the pilot to integrate the roll with the top 90 degree quadrant of the loop. $10 - 6 = 4$ points.

A half reverse Cuban eight is started too late, and the pilot squeezes the manoeuvre together by flying a 60 degree upline and making no line after the half roll. The manoeuvre still gets about halfway (50%) out of the zone. $10 - 1 - 3 - 5$ (misplacement, going out of the zone) = 1 point.

During an inverted spin entered flawlessly, the model aircraft unstalls and makes the final 90 degree of rotation as a vertical axial roll. $10 - 6 = 4$ points.

A pilot flies flawlessly consecutive eight $\frac{1}{8}$ rolls. $10 - 0 = 10$ points. You will not see too many of these in a competition but a manoeuvre should be awarded a 10 if there are no detectable flaws that would otherwise downgrade it to a 9.

A pilot performs a near-perfect split-S, and the only flaw is a very slight, barely visible low wing on exit. $10 - 0 = 10$ points. In some cases, an error may be so slight that a judge may want to consider giving a score of 10, rather than wait for the perfect manoeuvre to arrive.

A pilot performs a manoeuvre other than that stated on the score sheet. $10 - 10 = 0$ points.

After this incident, the pilot performs the rest of the manoeuvres out of sequence, and no manoeuvres correspond to the manoeuvres stated on the score sheet, in the order in which they are listed. All manoeuvres affected in this way score 0 points.

During a figure M, the model aircraft disappears from view behind a low cloud, or in the sun, which is directly in the background, so that only one stall turn is visible. Every judge scores N/O. The competitor will be awarded a reflight with the entire schedule being judged, but only the mark for the affected manoeuvre used to complete the tabulation.

During an avalanche, a judge fails to notice the snap-roll at the top of the manoeuvre. Score = N/O. The score tabulators will enter the numerical average of the other judges' scores, rounded to the nearest whole number.

After the last flying manoeuvre in a preliminary schedule, an official calls “time”. The competitor lands his aircraft after expiry of the time limit. No penalty.

ANNEX 5G

F3A RADIO CONTROLLED AEROBATIC MODEL AIRCRAFT

UNKNOWN MANOEUVRE SCHEDULES FOR FINAL FLIGHTS

- 5G.1. Unknown manoeuvre schedules shall be used in two of the four final flights for World or Continental Championships and shall be composed by the finalists or by Subcommittee approved computer software.. The composition of any unknown schedule shall be completed no less than 12 hours before the commencement of finals flights for unknown schedules.
- 5G.2. If the composition of the unknown manoeuvre schedules is done by the finalists, each finalist nominates in turn an appropriate centre or turn-around manoeuvre from the approved and published list of manoeuvres. This nomination and selection of manoeuvres may be either manual or computer-aided. The order of selection will be determined following the random flight draw with the order repeating until the manoeuvre schedule is complete. The nominated and selected manoeuvres must conform to the following general criteria:
1. The entry of one manoeuvre must be matched to the exit of the previous manoeuvre, for entry altitude, entry attitude (level upright or level inverted flight), size of manoeuvres (wide as in a horizontal eight or narrow as in a stall turn) and direction of flight.
 2. No duplication of manoeuvres.
 3. No duplication of centre manoeuvres from the same manoeuvre group with the exclusion of group 23 manoeuvres.
 4. Spins are entered into the wind.
 5. Minimum one manoeuvre of group 19. or G, and 20. or H, and 22, and 23. ||
 6. Three manoeuvres of each schedule must have K = 6. ||
 7. Five manoeuvres of each schedule must have K = 5. ||
 8. 17 manoeuvres per unknown schedule:
 - a) 9 centre manoeuvres (5 upwind, 4 downwind).
 - b) 8 turn-around manoeuvres (4 left and 4 right).
 9. The summary of K-factors must be at least 72. ||
- If the composition of the unknown schedules is done by computer software, then criteria 1 - 9 apply accordingly.
- 5G.3. Once an unknown schedule has been composed and checked for correctness it must receive the final approval of the Jury and the contest director. Printed copies, showing the Aresti pictograms and manoeuvre lists, shall then be distributed to team managers, finalists, judges, jury members, and non-finalists who are scheduled to perform warm-up flights. A sufficient number shall be made available by the organisers for spectators.
- 5G.4. After the composition of the unknown schedule, the judges shall receive instructions covering the unknown manoeuvres to ensure that they are fully aware of the sequence of manoeuvres.
- 5G.5. Aresti drawings of the unknown schedules must be provided to finalists and judges.
- 5G.6. Finalists may not attempt practice flights of an unknown schedule between its composition and the finals flights either with a model aircraft or via electronic flight simulator. Evidence of such practice shall be deemed cheating and shall lead to disqualification from the championships. Hand-held stick models are permitted.
- 5G.7. In addition to the warm-up flight for the finals known schedule, at least two warm-up flights must be arranged for the unknown schedule. The unknown warm-up flights may be observed by the finalists and must be judged. Under no circumstances should the flight scores of any warm-up flights be tabulated.
- 5G.8. List of manoeuvres for composition of unknown schedules
- 5G.8.1. **Centre manoeuvres**
- (Only one manoeuvre from each number group per schedule)
- 1.1 Rolling loop with one roll (from bottom) (K5)
 - 1.2 Rolling loop with one roll (from bottom) inverted entry (K5)
 - 1.3 Loop with 8-point roll (from bottom) (K5)

- 1.4 Loop with 8-point roll (from bottom) inverted entry (K5)
- 1.5 Loop with 4-point roll (from bottom) (K5)
- 1.6 Loop with 4-point roll (from bottom) inverted entry (K5)
- 1.7 Knife-edge loop (K6)
- 1.8 Knife-edge loop, inverted entry and exit (K6)
- 1.9 Knife-edge loop from top (K6)
- 1.10 Knife-edge loop from top, inverted entry and exit (K6)
- 1.11 Knife-edge loop with snap roll on top (K6)
- 1.12 Knife-edge loop with snap roll on top, inverted entry and exit (K6)
- 2.1 Two loops with half rolls at top (from bottom) (K3)
- 2.2 Two loops with half rolls at top (from bottom) inverted entry (K4)
- 2.3 Two loops with half rolls at bottom (from top) (K4)
- 2.4 Two loops with half rolls at bottom (from top) inverted entry (K3)
- 2.5 Two loops with full roll first top, half roll second (from bottom) (K4)
- 2.6 Two loops with full roll first top, half roll second, inverted entry (from bottom) (K4)
- 2.7 Two loops with half roll first top, full roll second (from bottom) (K4)
- 2.8 Two loops with half roll first top, full roll second, inverted entry (from bottom) (K4)
- 2.9 Two loops with full roll first bottom, half roll second (from top) (K4)
- 2.10 Two loops with full roll first bottom, half roll second (from top) inverted entry (K4)
- 2.11 Two loops with half roll first bottom, full roll second (from top) (K4)
- 2.12 Two loops with half roll first bottom, full roll second (from top) inverted entry (K4)
- 3.1 Avalanche with full snap (from bottom) (K3)
- 3.2 Avalanche with full snap (from bottom) inverted entry (K3)
- 3.3 Avalanche with 1½ snap (from bottom) (K4)
- 3.4 Avalanche with 1½ snap, inverted entry (from bottom) (K4)
- 3.5 Avalanche with 1 negative snap (from top) (K4)
- 3.6 Avalanche with 1 positive snap (from top) inverted entry (K3)
- 4.1 Triangular loop with full roll (from bottom) (K4)
- 4.2 Triangular loop with full roll (from bottom) inverted entry (K4)
- 4.3 Triangular loop with 2/2pt roll (from bottom) (K4)
- 4.4 Triangular loop with 2/2pt roll (from bottom) inverted entry (K4)
- 4.5 Triangular loop with 2/4pt roll (from bottom) (K4)
- 4.6 Triangular loop with 2/4pt roll (from bottom) inverted entry (K4)
- 4.7 Triangular loop with snap roll (from bottom) (K4)
- 4.8 Triangular loop with snap roll (from bottom) inverted entry (K4)
- 4.9 Triangular loop with 1½ snap roll (from bottom) (K4)
- 4.10 Triangular loop with 1½ snap roll (from bottom) inverted entry (K4)
- 4.11 Triangular loop with 1/2 rolls (from bottom) (K3)
- 4.12 Triangular loop with 1/2 rolls (from bottom) inverted entry (K3)
- 4.13 Triangular loop (base at bottom) with half rolls in 45 degree legs (K3)
- 4.14 Triangular loop (base at bottom) with half rolls in 45 degree legs, inverted entry (K3)
- 4.15 Triangular loop (base at bottom) with 2/4pt rolls in 45 degree legs (K4)
- 4.16 Triangular loop (base at bottom) with 2/4pt rolls in 45 degree legs, inverted entry (K4)
- 4.17 Triangular loop (base at bottom) with 2/2pt rolls in 45 degree legs (K4)
- 4.18 Triangular loop (base at bottom) with 2/2pt rolls in 45 degree legs, inverted entry (K4)
- 4.19 Triangular loop from top (base at top) with half rolls in 45 degree legs (K4)
- 4.20 Triangular loop from top (base at top) with half rolls in 45 degree legs, inverted entry (K4)
- 4.21 Triangular loop from top (base at top) with 2/4pt rolls in 45 degree legs (K4)
- 4.22 Triangular loop from top (base at top) with 2/4pt rolls in 45 degree legs, inverted entry (K4)
- 4.23 Triangular loop from top (base at bottom) with half rolls in 45 degree legs (K4)
- 4.24 Triangular loop from top (base at bottom) with half rolls in 45 degree legs, inverted entry (K4)
- 4.25 Triangular loop from top (base at bottom) with 2/4pt rolls in 45 degree legs (K4)
- 4.26 Triangular loop from top (base at bottom) with 2/4pt rolls in 45 legs, inverted entry (K4)
- 4.27 Triangular loop from top (base at bottom) with 2/4pt roll at bottom (K4)
- 4.28 Triangular loop from top (base at bottom) with 2/4pt roll at bottom, inverted entry (K4)
- 4.29 Triangular loop from top (base at bottom) with full roll (K4)
- 4.30 Triangular loop from top (base at bottom) with full roll, inverted entry (K4)
- 4.31 Knife-edge triangular loop (base at top) (K6)
- 4.32 Knife-edge triangular loop (base at top), inverted entry and exit (K6)
- 4.33 Knife-edge triangular loop (base at top), snap roll on horizontal leg (K6)
- 4.34 Knife-edge triangular loop (base at top), snap roll on horizontal leg, inverted entry and exit (K6)
- 4.35 Knife-edge triangular loop (base at top), roll on horizontal leg (K6)
- 4.36 Knife-edge triangular loop (base at top), roll on horizontal leg, inverted entry and exit (K6)

cont/...

- 5.1 Square loop with half rolls (K5)
- 5.2 Square loop with half rolls, inverted entry (K5)
- 5.3 Square loop with 2/4pt rolls (K5)
- 5.4 Square loop with 2/4pt rolls, inverted entry (K5)
- 5.5 Square loop with full snap over top (K4)
- 5.6 Square loop with full snap over top, inverted entry (K4)

5.10. CLASS F3M – LARGE RADIO CONTROLLED AEROBATIC POWER MODEL AIRCRAFT**Introduction**

Large R/C aerobatic power model aircraft F3M is a competition class inspired by CIVA Unlimited full scale aerobatics from the FAI.

The rules which follow contain material sourced from the *AMA Scale Aerobatics Rulebook (2015)* and the *Known and Unknown Sequences*. Permission has been granted to use this material by the International Miniature Aerobatic Club (IMAC).

5.10.1. Definition of a Large Radio Controlled Aerobatic Power Model Aircraft

A model aircraft, but not a helicopter, which is aerodynamically manoeuvred by control surface(s) in attitude, direction, and altitude by a pilot on the ground using radio control.

The model aircraft must be a scaled-down version of a full-size aerobatic aircraft. The general outlines of the model shall approximate the full size outlines of the subject aircraft. Exact scale is not required.

General characteristics of Large Radio Controlled Aerobatic Power Model Aircraft shall be verified in processing procedures as per FAI Sporting Code, Section 4, Volume ABR, for each participating model aircraft prior to a competition

5.10.2. General Characteristics of a large R/C Aerobatic Power Model Aircraft

Minimum overall span for monoplanes 2.1 m

Minimum overall span for biplanes 1.8 m

Maximum take off weight (with fuel and enhancers devices) 25 kg

- a) A tolerance of 1% will be allowed for possible inconsistencies in measurement instruments for size, weight, and voltage unless otherwise stated.
- b) Propulsion device limitations: Any suitable propulsion device may be used. Propulsion devices that are not permitted are those requiring solid expendable propellants, gaseous fuels (at room temperature and atmospheric pressure), or liquefied gaseous fuels.
- c) Only one propeller per aircraft is allowed. If the aircraft is utilising an internal combustion engine, only one engine is allowed. If the aircraft is utilising electric motors, more than one electric motor may be used.
- d) The propulsion device(s) must automatically shut-off or fully idle at the moment an R/C signal failure occurs.
- e) Paragraph B.3.1.a) of Section 4B (Builder of Model aircraft) is not applicable to F3M class.
- f) Radio equipment shall be of the open loop type (i.e. no electronic feedback from the model aircraft to the ground except for the stipulations in Volume ABR B.11.2). Auto-pilot control utilising inertia, gravity or any type of terrestrial reference is prohibited. Automatic control sequencing (pre-programming) or automatic control timing devices are prohibited.

Example:

Permitted:

1. Control rate devices that are manually switched by the pilot.
 2. Any type of button or lever, switches, or dials control that are initiated or activated and terminated by the competitor.
 3. Manually operated switches or programmable options to couple and mix control functions.
- cont/...

Not permitted:

1. Snap roll buttons with automatic timing mode.
2. Pre-programming devices to automatically perform series of commands.
3. Auto-pilots or gyros for automatic wing levelling or other stabilisation of the model aircraft.
4. Automatic flight path guidance.
5. Propeller pitch change with automatic timing mode.
6. Any type of voice recognition system.
7. Any type of learning function involving manoeuvre to manoeuvre or flight to flight analysis.

Note: A Spread Spectrum technology receiver that transmits information back to the pilot-operated transmitter, is not considered to be a “device for the transmission of information from the model aircraft to the competitor”, provided that the only information that is transmitted is for the safe operation of the model aircraft.

5.10.3. Technical verifications

1. Proof of scale:

- a) To prove that the general outlines of the model approximate the full size outlines of the subject aircraft, the competitor or his helper/team manager must submit, before the start of the competition, an accurate three-view drawing of the subject aircraft and some photos of the full size aerobatic aircraft in relation to the three-view drawing.
- b) The model shall be judged for likeness at a distance of approximately 3 metres.
- c) General outlines of the model should approximate the full size subject aerobatic aircraft.
- d) The area of control surfaces compared to fixed surfaces will not be considered.
- e) Example: only the general outline of the wing, stabilizer and fin will be considered, not the ailerons, elevator, or rudder, but the concept of moving surfaces must be the same as on the subject aircraft. (Aileron may be in two parts, moving part of the fin for aerodynamic balance, etc. Trim tabs or winglets are forbidden, if not on the full-size aircraft.)
- f) From the side view of the model aircraft (with stabilizer set at 0° incidence) and on the engine axis line reference, the wings and horizontal tail position must be seen as they are on the full size subject aircraft: On the axis or above or below.

2. Sound / Noise Level test:

- a) The maximum noise level will be 94 dB(A) measured at 7 m from the centre line of the model aircraft with the model aircraft placed on the ground over concrete or macadam at the flying site. If a concrete or macadam surface is not available then the measurement may be taken over bare earth or very short grass in which case the maximum noise level will be 92 dB(A).

cont.../

- b) The tolerance of the sound/noise level measurement is the specified tolerance of the manufacturer of the measuring instrument.
- c) With the propulsion device running at 5700 rpm (+/- 10%), the measurement will be taken 90 degrees on the right-hand side, with the nose of the model aircraft pointing into the wind. The Class 1 SLM (Sound Level Meter) microphone shall be placed on a stand 30cm above the ground in line with the propulsion device other than the helper restraining the model aircraft, and the sound steward, nobody or sound/noise reflecting or sound absorbing objects shall be nearer than 7 m from the model aircraft or the microphone. The sound/noise measurement shall be made as a part of model processing. Electric powered model aircraft must have installed the same batteries for all model processing procedures. The sound test area must be located in a position that does not create a safety hazard to any person around.
- d) In the event of a model aircraft failing the sound/noise test, indication of the result or the reading shall be given to the competitor and his team manager. The model aircraft shall be impounded by a flight line official immediately following the sound test. The competitor and his equipment shall remain under supervision of the flight line official, while some modifications or adjustments may be made and the propulsion battery fully recharged. The model aircraft shall be re-tested under regular operational conditions within 90 minutes by a second noise steward using a second sound level meter, and in the event that the model aircraft fails the re-test, the model processing fails.
- e) If the technical verifications are not in accordance with the rules, the model aircraft is not allowed to fly.

5.10.4. Number of flights

A competition for model aircraft class F3M unlimited is based on three rounds:

- A minimum of one flight of 1 known sequence, valid for one year.
- A minimum of one flight of 1 unknown sequence. This unknown sequence is given to each pilot before the round, without any possibility of practising the sequence. The difficulty of this round shall be equivalent to that of the known sequence.
- A minimum of one flight of a 4 minutes freestyle program chosen by the competitor.

Each competitor has the right to a minimum of three official flights (one known schedule + one unknown schedule + one freestyle schedule).

5.10.5. Definition of an attempt

There is an attempt when the competitor is given permission to start.

An attempt begins when the pilot or caller makes a visual signal indicating to the judges when the pilot is starting the sequence. A visual signal is mandatory to initiate the attempt. If there is no visual signal made the pilot becomes subject to the other standard constraints stipulated in these rules, e.g., time limit for starting, no aerobatics before starting the sequence, etc. Once the attempt is made by means of the visual signal, judging will begin as soon as the aircraft departs from the wings-level horizontal entry line and enters the first figure of the sequence. The horizontal entry line to the first figure of a sequence is not judged.

5.10.6. Number of Attempts

Each competitor is entitled to one attempt for each official flight.

Note: An attempt can be repeated at the contest director's discretion only when any unforeseen reason beyond the control of the competitor, causes the model aircraft to fail to start (e.g. there is radio interference). Similarly, in a flight that is interrupted by any circumstance beyond the control of the competitor, the competitor is entitled to a reflight, with the entire sequence being flown and judged, but only the affected figure and the unscored figures that follow will be tabulated. This reflight should occur on the first flight after the judges' break or last in the round, in front of the same set of judges, or, if it involves a protest, as soon as the FAI Jury has deliberated and communicated the outcome of the protest to the contest director. The result of the reflight will be final.

cont/...

5.10.7. Definition of an Official Flight

There is an official flight when an attempt is made whatever the result

5.10.8. Definition and number of helpers

A helper may be a Team Manager, another competitor, or an officially registered supporter. Each competitor is permitted one helper (usually the caller) during the flight. Two helpers may be present and assist during the starting of the propulsion device. One person, either a helper, or the team manager, or the caller, must place the model aircraft for take-off and keeps the model aircraft restrained before take-off.

In exceptional circumstances, another helper may join the competitor and caller/helper during the flight, but only to hold a sun-shield as protection from direct sunlight or an umbrella as protection from the rain. These protection devices must not interfere with the judges' vision of the figures. Physically disabled competitors requiring an additional helper and/or caller or other assistance, must request permission with full details, with their entry, from the organiser of a competition. This additional assistance must be provided by the competitor, must not give him an unfair advantage over other competitors, and must not unduly delay or interfere with the running of the competition. Except for communication between the caller and the competitor, no other performance-enhancing communication with helpers is permitted during the flight.

5.10.9. Aerobatic airspace**a) X-Axis and Y-Axis:**

The X-Axis is the main flight axis, parallel to the flight line. The Y-Axis is perpendicular to the X-Axis (flight line).

Depending on local airfield conditions, the organisers shall define an X-Axis of flight line so that the sun does not interfere with competitors or judges.

The X-axis can only be changed between rounds of flights and not during a round.

b) Safety line:

From the competitor's position, the "safety line" is located 30 metres ahead of the pilot point. This line delimits the "no-fly" zone for safety reasons and the aircraft must at all times remain on the side of the safety line away from the contestants, pits and spectators. The safety line extends to infinity. The judges shall zero (0) any figures where the aircraft completely or partially crosses the safety line. For repeated safety line violations by a competitor during a flight, the contest director may ground the flight in progress and zero the round. If a competitor repeatedly violates the safety line, the contest director may disqualify the competitor.

If there is no natural barrier or demarcation at or beyond 30 m that can be used to clearly mark the safety line, the contest director must set up clearly visible markers at the safety line distance for the judges to use in enforcing deadline observance.

Audible and visual signals to indicate violations of the aerobatic airspace are not to be employed.

c) Judges position:

The judges shall be seated on a line parallel to the X-Axis behind the competitor's position.

5.10.10. Marking

- a) Each judge has to assess each figure and any other relevant action of the competitor individually and independently from the other judges.
- b) Take-off and landing procedures are not judged and are not scored.
- c) If a model aircraft is, in the opinion of the judges, unsafe or being flown in an unsafe or inappropriate manner, they may bring this to the attention of the flight line director, who may instruct the pilot to land.
- d) Each figure is scored with a mark on a scale of 10 to 0. Half (0.5) points may be used in judging. Points are deducted for imperfections following the criteria for judging as per the *Large R/C Aerobatic Power Aircraft Official Judging Guide*.
- e) Figures must be performed where they can be seen clearly by the judges. If a judge, for some reason outside the control of the competitor, is not able to follow the model aircraft through the entire figure, the Judge will give a mark of "Average" or "A" to that figure. In this case, the judge's mark for that particular manoeuvre will be the average of the numerical marks given by the other judges.
- f) If a judge misses seeing a figure, or any part of a figure such that a grade cannot be given with full confidence, the Judge will give a mark of "Average" or "A" to that figure.
- g) If all the judges give an "A" mark to a figure, then the pilot is allowed to re-fly this figure. This reflight should occur on the first flight after the judges' break or last in the round, in front of the same set of judges. The result of the reflight will be final.
- h) Any figures not completed, or flown out of sequence with the stated schedule shall be scored zero (0). Zero scores do not need to be unanimous, except in the case where an entirely wrong figure was performed. Judges must confer after the flight in this case, bringing it to the attention of the flight line director/contest director on site.
- i) Degree of difficulty factor (K-factor) values shall be assigned to individual figures based upon the current Aresti Aerobatic Catalogue located on the Aresti website. When calculating contestant scores, each individual figure mark shall be multiplied by its K-factor. The flight raw points score shall be the result of summing the "K-factored" (figure marks multiplied by K-factor) scores

1. Sound presentation score for Known and Unknown flights:

- a) Judges will evaluate each individual flight flown in its entirety for overall sound presentation. Each judged Known and Unknown sequence, shall have one "figure" added to the end of the score sheet after individually judged figures. This figure shall be known as the Sound Score. The Sound Score will have a 30 K value.
- b) The sound presentation will be scored with a mark on a scale of 10 to 0 with 10 denoting "Very Quiet," 5 denoting "normal" and 0 denoting "Very noisy." Whole mark will be used for scoring. This sound mark will then be multiplied by the 30 K value and included in the total flight raw points score for the sequence. Note that each judge's score is independent of the other(s) and no conferencing on the sound score is required.
- c) If a competitor receives a sound score of three (3) or less for the round from two or more judges, the competitor and his team manager will be notified of the problem and will be requested by the Contest Director to adjust or modify the aircraft in order to reduce the sound level before the next round. If that competitor, after notification, again receives a sound score of three (3) or less for the next round from two or more judges, that pilot will be disqualified.

2. Airspace Control Score:

- a) Judges will evaluate each individual sequence flown, in its entirety, for overall airspace control. Each judged Known and Unknown sequence, shall have one "figure" added to the end of the score sheet, after individually judged figures. This figure shall be known as the Airspace Control Score and will be assigned by each judge. The Airspace Control Score will have a 15 K value.

- b) The airspace control will be scored with a mark on a scale of 10 to 0. Whole marks will be used for scoring. This mark will then be multiplied by the 15 K value and included in the total flight raw points score for the sequence.
- c) The following standard will be used for assessing the pilot's performance in maintaining control and awareness of the aerobatic airspace and for placing figures in the airspace in a manner that allows the figures to be optimally judged.
- d) The highest standard for Airspace Control will be the pilot that exhibits a significant ability to control the location of the aircraft inside the airspace, relative to the judges, which results in a tight footprint and has the aircraft such that it can be optimally judged at all times. The pilot that exhibits excellent airspace control should receive a mark ten (10).
- e) The lowest standard for Airspace Control will be the pilot that exhibits a poor ability to control the location of the aircraft inside the airspace, relative to the judges, which results in an excessively large footprint and has the aircraft consistently so far away as to be difficult to properly judge. The pilot that exhibits very poor airspace control should receive a mark zero (0). Pilots exhibiting airspace control within the range of these two standards will be graded with a range of possible marks from ten (10) to zero (0) in whole point increments.

2. Sequence break penalty:

When a break in Sequence occurs, a break penalty of 100 points must be assessed against the competitor's raw points score prior to normalizing.

3. Score publishing:

The individual figure mark given by each judge for each competitor must be made public at the end of each round of competition. The team manager must be afforded the opportunity to check that the marks on each judge's score document correspond to the tabulated scores (to avoid data capture errors). The score board/monitor must be located in a prominent position at the flight line, in full view of the competitors and the public.

5.10.11. **Classification:**

- a) Each flight shall be normalized to a standard 1000 points. The pilot with the highest raw points score receives 1000 points for the flight. Each pilot thereafter shall have their raw points score divided by the high raw points score giving a percentage of that high raw score, which is then multiplied by 1000 to get the normalized score. Scores shall be rounded to two (2) places of decimal accuracy.
- b) For example: Contestant A wins the flight with a raw score of 4850 points. Contest B is second with 4766.5 points. Contestant A receives 1000 points for the flight. Contestant B's score is 982.78 points ($4766.5 \div 4850 = 0.982783 \times 1000$ for 982.783, which rounded to two (2) places of decimal accuracy for a final score of 982.78).
- c) Final classification will be done considering the sum of the scores of the three normalized flights: known, unknown, and freestyle multiplied by the following coefficients:
 Known40%
 Unknown40%
 Freestyle.....20%
- d) In the case where more than one flight of each round have been completed, the sum of the best known flight, the best unknown flight, and the best freestyle flight normalized scores will be considered.

 Example: One flight known, two flights unknown, and one free-style flight have been completed: Classification is done by adding the known normalized flight score and the best score of the two unknown normalized flights scores and the freestyle normalized flight score.
- e) The highest combined scores will determine the winner. In case of ties, all the normalized flights of the contestant shall be used to determine the winner.

cont/...

5.10.11.1 For World and Continental championships:

- a) Preliminary: Each competitor will have 6 preliminary flights.
 - (2) Flights of 1 known sequence
 - (2) Flights of 1 unknown sequence
 - (2) Flights of a 4 minutes freestyle schedule of the competitor's choice
- b) The sum of the best known flight, the best unknown flight, and the best freestyle flight normalized scores will be considered to determine the preliminary ranking.
- c) The top ten pilots are qualified for the final.
- d) In the event of adverse weather conditions where no further flying is possible, the preliminary classification may be determined by the sum of the best flights completed.
- e) Final: Each of the ten competitors will have 6 final flights.
 - (2) Flights of 1 known sequence
 - (2) Flights of 1 unknown sequence
 - (2) Flights of a 4 minutes freestyle schedule of the competitor's choice
- f) The sum of the best final known flight, the best final unknown flight, and the final best freestyle flight normalized scores will be considered to determine the final ranking.
- g) In the event of adverse weather conditions where no further flying is possible, the final classification may be determined by the sum of the best flights completed.

5.10.11.2 Team classification:

- a) The team classification is established at the end of the competition (after the finals) by adding the numerical final placing of the best three team members of each nation. Teams are ranked from the lowest numerical scores to the highest, with complete three-competitor teams, ahead of two-competitor teams, which in turn are ranked ahead of one-competitor teams. In the case of a tie, the best individual placing decides the team ranking.
- b) Note: Final flights to determine the individual winner are usually only required for World and Continental Championships. For open international events, national championships, and domestic competitions, In the case where more than one flight of each round have been completed, the sum of the best known flight, the best unknown flight, and the best freestyle flight normalized scores may be used to determine the individual winner and team placing.

5.10.12. Judging:

- a) For open international events and World or Continental Championship with 30 or fewer competitors, the organiser must appoint a minimum of 1 panel of 5 judges. The judges in a panel must be of different nationalities and must be selected from the applicable list of current or upcoming approved FAI Aerobatic International Judges. Those selected must reflect the approximate geographical distribution of pilots participating.
- b) For domestic's competition, the organiser may appoint 1 panel of minimum 3 judges.
- c) The highest and lowest marks for each figure must be discarded, but only when the panel is of four or more judges.
- d) For World and Continental Championship with more than 30 competitors, the organiser must appoint 2 panels of 5 judges (a total of ten judges). The judges in a panel must be of different nationalities and must be selected from the applicable list of current or upcoming approved FAI Aerobatic International Judges. Those selected must reflect the approximate geographical distribution of pilots participating. Judge assignment to the 2 panels will be by random draw.
- e) Panels of judges shall judge all competitors an equal number of times and all competitors shall have an equal opportunity to fly before all judges. Substitution of judges, which precludes equal exposure by all contestants, shall be avoided. If adverse weather conditions preclude equal exposure for all competitors, the results of the round may be disregarded at the discretion of the Contest Director.

- f) The invited judges for a World or Continental Championship, must have had a reasonable amount of F3M judging experience of known current sequence, and must submit a résumé of their judging experience to the organiser during the nomination process. The organiser must in turn submit the résumés to the CIAM Bureau for approval.
- g) For the preliminary rounds of a World or Continental Championship each panel of 5 judges will judge:
 - (1) Flight of 1 known sequence
 - (1) Flight of 1 unknown sequence
 - (1) Flight of a 4 minutes freestyle schedule
- h) The competitors will be arranged in two groups. Assignment to the two groups will be by random draw. The groups fly after one another the same round or at the same time in case of two flight lines as follows:

Rounds	Competitor Group	Panel of Judge	Flight lines
Known 1	1	1	1
	2	2	2
Unknown 1	1	1	1
	2	2	2
Freestyle 1	1	1	1
	2	2	2
Known 2	2	1	1
	1	2	2
Unknown 2	2	1	1
	1	2	2
Freestyle 2	2	1	1
	1	2	2

- i) For the final rounds of a World or Continental Championship the 2 panels of 5 judges are combined in a group of ten judges.
- j) For each competitor, the score from the 10 judges will be combined for a total score for the flight.
- k) The 2 highest and the 2 lowest marks for each figure must be discarded.
- l) Before every World or Continental Championship, there shall be a briefing for the judges, followed by training known flights by non-competitors. Also, warm-up flights for the judges should be flown by non-competitors before the first official preliminary known and unknown flight each day.
- m) For the final the highest placing non-finalist should be awarded the honour of performing the warm-up of known and unknown flights. Warm-up flights should be judged but under no circumstances should they be tabulated. Any deviations from the above procedures must be stated in advance by the organisers and must have prior approval of the CIAM or the CIAM Bureau.

5.10.13. Organisation for Large R/C Aerobatic Model Aircraft Contests

- a) Members of a National team may make use of the model aircraft processed by another member of the same national team. However, if that team member did not process the model aircraft, then it must be re-registered and re-marked appropriately. This is the responsibility of the team manager.
- b) For transmitter and FM frequency control see Volume ABR Section 4B, paragraph B.11.

cont.../

- c) The flight competitors' order of each group for the first Known flight 1 of preliminary rounds will be established by a random draw. The flight competitors order for flights two (Unknown 1), three (Free-style1), four (Known 2), five (Unknown 2) and six (Free-style 2) will start 1/6, 1/3, 1/2, 2/3 and 5/6 down the list order with decimals rounded-up.
- d) The flight competitors order for the first Known flight 1 of final rounds will be established by a random draw. The flight competitors order for flights two (Unknown 1), three (Free-style1), four (Known 2), five (Unknown 2) and six (Freestyle 2) will start 1/6, 1/3, 1/2, 2/3 and 5/6 down the list order with decimals rounded-up.
- e) The draw for flight order will be done for each flight line, so that FM frequencies are separated with two competitors in between. Team members will not be drawn to fly directly after each other and will be separated by at least two competitors.
- f) Competitor identification numbers will only be assigned after this flight order draw, by competitor group, and in numerical ascending order.
- g) During his flight the competitors must stay in the proximity of the judges and under the supervision of the Flight Line Director.
- h) Competitors must be called by a flight line official at least five minutes before they are required to occupy the starting area.
- i) If the FM frequency is clear the competitor or his team manager will be allowed to collect the FM transmitter from the transmitter pound. The competitor and his helper(s) then occupy the starting area so that a radio check can be performed to verify the correct functioning of the radio control equipment. If there is a FM frequency conflict, the competitor must be allowed to a radio check of a maximum of one minute before the beginning of the starting time.
- j) The time keeper will audibly notify the competitor when the minute is finished and immediately begin timing the starting time.
- k) For electric powered models, the electric power circuit(s) must not be physically connected, before the starting time is began and must be physically disconnected immediately after landing.
- l) A competitor is allowed to a two (2) minutes of propulsion device starting time. The timing starts when the contest director, or timekeeper, gives an instruction to the competitor to start.
- m) The competitor may not start his propulsion device model aircraft unless he has been instructed by a flight line official to do so. Deliberate starts at the flight line during official flying to check the propulsion device will be subject to disqualification from that round.
- n) One person, either a helper, or the team manager, or the caller, must place the model aircraft for take-off and hold the model aircraft before taking off. If the model aircraft taxis to take off point without being held by an assistant, the contest director/time keeper will advise the competitor and helper that the flight may not proceed. The flight shall score zero point.
- o) If after two (2) minutes the contestant is unable to start the propulsion device, he will move to the first flight after the judges' break or at the end of the round rotation. If the contestant fails to start a second time, he shall receive zero for the round.
- p) The contestant has one (1) minute from the time the wheels leave the ground during takeoff to start the sequence.
- q) The model aircraft must take-off and land unassisted, that is, no hand launched flights.
- r) There shall be no time limit for sequence execution.
- s) During the flight, the pilot and his helper/caller (if required) must stay in the designated position in front of the judges, at the pilot point and under the supervision of the flight line director. The pilot must wear or display his identification/start number.
- t) Before to start the sequence and before landing, competitors shall only be allowed to perform the following trim and positioning manoeuvres:
 - Turns.
 - Half Cubans with only a single ½ roll on the 45 down line.
 - Reverse Half Cubans with only a single ½ roll on the 45 up line.

- The ½ roll is optional based on aircraft positioning required starting the sequence.
- Half loops up or down (Immelman or Split S) with only one half roll on entry or exit.
- Single half roll to inverted immediately before to start the sequence for the case in which an inverted entry to the first figure is required.
- Single half roll to upright after the end of sequence for the case in which an inverted exit from the last figure is required.
- A vertical up or down line with a simple push/pull for entry and exit. A single 1/2 roll is allowed on this vertical line only if required to orient the aircraft properly for entry to the first figure.

Exceptions to this limitation may only be directed by the contest director or flight line director in the normal course of safely managing the airspace. Pilots will follow such directions and no penalty will apply.

- u) Turnaround manoeuvres may not be performed at low altitude or directly in front of the judges. No other aerobatic manoeuvres are allowed immediately following the airplane breaking ground except for the Four Minute Freestyle. Any infraction shall result score zero point for the flight.
- v) No public address or commentary should be made during flights.
- w) The contestant has two (2) minutes between the end of the sequence and touchdown for landing, unless required to hold upon command from the appropriate official.
- x) The scoring will cease at the end of sequence except for the sound presentation score, which is judged after the model aircraft has landed, irrespective of the time.
- y) The flight ends when the model aircraft has landed.
- z) The propulsion device must be shut-off immediately after the model aircraft has landed, otherwise the flight shall score zero points.

Execution of figures:

The figures must be executed during an uninterrupted flight in the order in which they are listed in the sequence. The competitor may make only one attempt at each scored figure during the flight.

The direction of the first manoeuvre or the landing may be different from that of the take-off.

5.10.14. Sequences of figures

- a) The known and unknown sequences must be drawn according to the current FAI ARESTI Aerobatic catalogue.
- b) The Known sequence is valid for a one year period.
- c) The unknown sequence must be completely new, unknown, and equal in difficulty factor to the known sequence.
- d) The Unknown sequence is given to the competitors in the evening before the competition day, or on the morning of the competition day with a minimum of two (2) hours before the round, with no possibility of practice flying. In a proven case of a competitor having practised the unknown sequence with a flying model or on a computerized flight simulator, the competitor must be disqualified. Hand-held stick models are permitted.
- e) Before the beginning of the round of the unknown flight, the judging co-ordinator will brief the judges and the competitors to clearly explain the figures (if needed the figures can be corrected), and what is expected from the competitors.
- f) Knowledge of the Aresti cryptographic system is mandatory to all competitors and judges. No text descriptions will be given.
- g) For each figure, judges and competitors must refer to the Large R/C aerobatic Power aircraft official flying and Judging Guide rules that define all manoeuvres, and the referring errors that can be avoided.
- h) The known sequences with form A: Score sheet, B and C: Wind directions are given at Annex 5L.

5.10.15. Unknown figure sequences for final flights

- a) Unknown figures sequence shall be used in the two final flights for World or Continental Championships and shall be composed by the 10 finalists. The composition of any unknown sequence shall be completed no less than 2 hours before the commencement of finals flights for unknown sequences.
- b) The composition of the unknown figure sequence is done by the 10 finalists.
- c) Each finalist nominates in turn an appropriate figure from the current FAI ARESTI Aerobatic catalogue (condensed). This nomination and selection of figures may be either manual or computer-aided.
- d) The order of selection will be determined following the random flight draw with the order repeating until the figure sequence is complete. The nominated and selected figures must conform to the following construction rules:
- e) The entry of one figure must be matched to the exit of the previous figure, for entry altitude, entry attitude (level upright or level inverted flight) and direction of flight.
- f) No duplication of figure with the same elements.
- g) Spins are entered into the wind.
- h) The summary of K-factors must be at least similar to the known sequence.
- i) In order to achieve versatility in the design of the sequences, it is a mandatory requirement that competitors shall include the following. Sequences not including these figures will not be accepted:

Family	Figures
1	At least one figure
2	At least one figure
5	Maximum one figure
6	Not mandatory. Maximum one figure into the wind
7	At least one figure
8	At least one figure
9	Not specified

- j) Once an unknown sequence has been composed and checked for correctness it must receive the final approval of the Jury and the contest director. Printed copies of forms A, B and C shall then be distributed to team managers, finalists, judges, jury members, and non- finalists who are scheduled to perform warm-up flights. A sufficient number shall be made available by the organisers for spectators.
- k) Finalists may not attempt practice flights of an Unknown schedule between its composition and the finals flights either with a model aircraft or via electronic flight simulator. Evidence of such practice shall be deemed cheating and shall lead to disqualification for the championships. Hand-held stick models are permitted.

5.10.16. Freestyle program

- a) The (4) four minutes Freestyle program give a competitor the opportunity to demonstrate his own skill and the qualities of his model aircraft. There are no rules governing the composition of the program. However, safety is of prime importance.
- b) The freestyle program is freely composed by the competitor and flown in harmony to simultaneously played music of his choice. Any possible flight manoeuvres may be flown and "show effects with enhancers" presented. It is permitted to perform different programs in conjunction with different music in each round.
- c) The model aircraft flown by a competitor in the freestyle round may be different than for the known and unknown rounds. This model aircraft must be conform to the general characteristics of the F3M class.

- d) The maximum duration of a freestyle flight is four (4) minutes.
- e) The timing and music begins when the pilot or caller makes a visual signal indicating to the judges when the pilot is starting the program (during take-off or maximum 1 minute after take-off)
- f) After the end of the four-minute period, the judges cease to consider any further manoeuvres that may have been performed. If the model aircraft is still airborne it must be landed immediately, otherwise the judges will mark a zero score for the criteria "Technicality of the manoeuvres" (K20).
- g) If the pilot lands any time prior to 3 minutes 30 seconds (three and one-half minutes) the judges score is "prorated" Example: the pilot lands at the three (3) minutes time. The judges will score the contestant as though he flew four minutes. The score room will tabulate the scores normally and the pilot will receive three-fourths (75%) of the judges score for his final score. If the pilot lands any time after three and one-half minutes there is no penalty.
- h) Specific circumstances that will disqualify the competitor's flight:
 - A: If the model airplane touches the ground during the flight or crashes, it is a disqualification.
 - B: If the model airplane goes behind the deadline, it is a disqualification.
 - C: If the pilot performs dangerous or unsafe manoeuvres or high energy manoeuvres directed at the judges or spectators, it is a disqualification. (As determined by a majority of the judges and/or the line officer/steward).

5.10.16.1. Marking Criteria

Judging of the Freestyle program comprises three elements. Each element contains several criteria, with marks ranging from 10 to 0. Half (0.5) points may be used in judging. Each mark is multiplied by a difficulty coefficient (K-Factor).

a) Technical performance: Three criteria

Technicality of the manoeuvres: K= 20.

Complicated and technically challenging manoeuvres must be awarded higher marks, provided there is not a lack of quality in their execution. Simple and less complex manoeuvres should attract fewer marks.

Quality: K= 20.

The entire flight must be devoid of "missed" manoeuvres, and must exhibit all-round good quality. The fact that it is a freestyle schedule must not allow the performance to become sub-standard in technicality and quality. It is not intended to be a circus performance.

Diversity: K= 20

The competitor must avoid repetitive use of the same manoeuvres, and only in exceptional circumstances will repeat manoeuvres be tolerated to emphasise a particular passage in the music.

b) Artistic impression: Two criteria

Harmony with music, program choreography: K= 40

The music (choreography) has to enhance the presentation and to create a complementary atmosphere. The flight performance should be synchronised with the music and must not be a "3D-sketch" with background music. On the other hand the music must not detract from the presentation. The selected music piece(s) should contain fast-slow, soft-loud and dramatic sections. The manoeuvres should follow the music and end with it. The mood of the selected music should be reflected in the manoeuvres and the presentation. Show effects can support this. Music pieces with little contrast, variety or tempi result in downgrades.

Enhancers: Smoke producing devices, or streamers: K=20

The use of these devices should be used to accentuate or emphasise some manoeuvres. Improper or inefficient use, even if impressive, should not result in full marks being given.

When, for example, an impressive smoke producing device is used to accentuate a manoeuvre or a dramatic section of music, 3 points mark should be given. If the smoke is used throughout the duration of the flight, only 1 point should be given.

c) Positioning: Two criteria

Setting of the manoeuvres: K= 30

The schedule must be well structured, with good placement and positioning of the manoeuvres, giving judges the best visibility of the entire performance. Marks should be deducted if, by design or by the influence of the wind, the schedule is noticeable biased to the left or to the right.

Sequence of manoeuvres: K= 30

The entire flight must retain the interest of judges, with a natural flow from start to finish, with coherent matching of manoeuvres.

5.10.16.2. Safety

- a) The contest director will nominate a safety line officer/steward. This officer/steward is in charge of safety and will be located within hearing distance from the competitor. The safety steward must observe the model aircraft and the competitor's actions during a flight, and is empowered to instruct a competitor to terminate his flight and to land his model aircraft immediately if necessary during a safety conflict.
- b) From the competitor's position, the "safety line" is located at 20 metres ahead of the pilot point. This line delimits the "no-fly" zone for safety reasons and the aircraft must at all time (except for take-off and landing) remain on the side of the safety line, away from the contestant, pits and spectators. The safety line extends to infinity.
- c) If there is no natural barrier or demarcation at or beyond 20 m that can be used to clearly mark the safety line, the contest director must set up clearly visible markers at the safety line distance for the safety line officer/steward to use in enforcing deadline observance.

ANNEX 5C

F3M LARGE R/C AEROBATIC POWER AIRCRAFT OFFICIAL FLYING AND JUDGING GUIDE

5C.1. Purpose:

The purpose of this Large R/C Aerobatic Power Aircraft Flying and Judging Guide is to provide an accurate description of each type of figure used in competition and to provide a reference for use in developing a uniformly high standard of judging in all CIAM sanctioned contests. Study of this guide by the competitor will help him or her learn exactly what is expected, while study by the judges will help them decide precisely how well the competitor meets these expectations.

Flying and judging are very similar in nature. This is why contestant judging is generally promoted. Nevertheless, there are some key differences between judges and pilots, mostly related to Mental Attitude and Technical Knowledge. Reference to any gender in this document shall include both male and female.

5C.2. Mental attitude: Mental attitude by itself can be divided into four (4) sub-categories:

5C.21. Bias: Bias can either be conscious or unconscious. The conscious bias is fortunately rare, and would be for instance when a judge deliberately awards a score lower or higher than the competitor deserves. The word for that action is cheating and it shall not be tolerated. Conscious bias can also occur because a friendship or regional relationship with the competitor. Most problems with bias are of the unconscious or unintentional type since they are more prevalent. A good example would be the 'halo' or recognition for a champion or well-known flyer who might unintentionally be awarded extra points based on recognition alone. This can work against an unknown flyer having a great day. This type of bias can also work against the champion flyer, just because the judge unconsciously might want to see a new face in the winner's circle. Another example might be bias towards a certain type of airplane like mono versus biplane, or bias towards a style of flying.

For instance, a pilot cuts crisp corners on square manoeuvre versus a flyer with a more graceful style. Sometimes we even see an equipment bias where a judge may unknowingly try to support a previous personal opinion regarding a certain brand of radio, certain type of engine, or size of aircraft. These unconscious biases are easily understood as we all have personal preferences. Nevertheless, the judge must try hard to base his or her score solely on the quality of the flight, and nothing more.

5C.22. Self-confidence: The self-confidence factor is based on knowledge instead of arrogance or ego. A judge with self-confidence can score a pilot fairly, whether he is a World Champion or not. A judge with self-confidence will not be uncomfortable in giving a wide range of scores in a single sequence. Scores as low as 2 or 4, or as high as 9 or 10 will not be uncommon.

5C.23. Sense of independence: A judge doesn't operate in a glass cage but shares the flight line with another judge and scribes. The judge cannot allow himself or herself to be influenced by more dominant or experienced personalities sitting nearby. Judging is an independent exercise and caution should be exercised not to influence or be influenced by others on the flight line. If scribes are used, scores should be communicated using a low tone voice so that the other judge and the pilot cannot hear and be influenced by it.

5C.23. Adherence to the rules: Adherence to the rules is probably the most significant of all the elements required to make a good judge. A good judge has developed a sense of fair playing and knows that a good contest is one in which everyone plays by the same rules. Anyone sitting in a judging chair must adhere to the rules existing at that time or disqualify him or herself.

5C.3. Technical knowledge:

Technical knowledge employs the use of an organised system of downgrading as well as the need to be consistent and accurate. The downgrading or deficit grading system assumes that the contestant is going to fly a perfect figure that starts with a 10, and then downgrades it based on the mistakes observed as they occur, rather than falling into the trap of scoring on overall impression. It should be assumed by a judge that a contestant is going to fly a well-formed figure, so he should start with the grade of 10. As he watches the figure, he then begins to find fault with what he sees and starts downgrading as it progresses. This system is preferable to waiting until the figure is finished, and tries to assign a grade on overall impression. The latter can be erratic and inconsistent, and also confines grading into a too narrow range. However, as a final check, the score should be consistent with the figure's overall quality.

Every judge should strive for a high degree of consistency and accuracy. The most important aspect of consistent judging is for each judge to establish his or her standard and then maintain that standard throughout the contest.

5C.4. FAI ARESTI System (condensed)

The F3M Large R/C aerobatic power aircraft aerobatics sequences are based on a catalogue of figures adopted by the FAI (Fédération Aéronautique Internationale), from the “ARESTI Aerobatic Catalogue (Condensed)” for full scale aerobatics. The catalogue consists of the following nine (9) families of figures:

- Family 1 – Lines and Angles
- Family 2 – Turns and Rolling Turns
- Family 3 – Combinations of Lines
- Family 4 – (Not in Use)
- Family 5 – Stall Turns (Hammerheads)
- Family 6 – Tail Slides
- Family 7 – Loops and Eights
- Family 8 – Combinations of lines, Angles, and Loops
- Family 9 – Rolls and Spins

It is beyond the scope of this Flying and Judging Guide to explain in detail the structure of the ARESTI catalogue, and how to read the ARESTI drawing language used. A good judge (as well as a pilot) must become very familiar with the above and should be able to quickly understand the figure simply by looking at the ARESTI drawing. The complete catalogue of figures is available directly from the ARESTI Web site at (<http://www.arestisystem.com>). Judges and pilots are strongly encouraged to download this document for personal reference.

5C.41. Rules: Large R/C aerobatic power model aircraft class F3M has several rules that differ from either Full Scale Aerobatics (CIVA) or class F3A. Because the judging pool used in F3M contests sometimes comes from both or either of those two groups, it is useful to go through the major differences:

Rules	CIVA Powered Aircraft	F3M / AMA RC SCALE AEROBATICS	F3A
Downgrade one (1) point for each deviation of:	5 degrees	10 degrees (1/2 point for 5°)	15 degrees (1 point for 15°)
Judging criteria:	Aircraft attitude and Flight path	Flight path	Flight path

5C.42. Definitions:

There are some words and phrases which are used consistently throughout the text in a very precise sense, and it is as well to define at the start the sense in which each is used:

Figure: Each individual component of a sequence, which may comprise one or more manoeuvres in combination; it starts and ends with a horizontal line.

Manoeuvre: Any one of the basic aerobatic movements, which may be combined to make a figure (e.g. an avalanche is one figure consisting of two manoeuvres -- loop and flick roll)

Mark/Point/Score: Marks are assigned (from 0 to 10) by judges, and may be devalued by various point values. The score is calculated by multiplying the judges' marks by the coefficients (K factors) and adding the products.

5C.5. Flight Path, Aircraft Attitude, and Wind Correction:

Large R/C aerobatic power model aircraft requires all figures within the sequence to be wind corrected.

Judges should evaluate any figure focusing primarily on the aircraft flight path, but at the same time, also downgrade for any variation of the aircraft attitude that is not directly related to maintaining a correct flight path.

5C.51. Flight path. Think of the aircraft condensed into a single dot and watch the path this dot takes through the sky. This is the flight path, or track, or the aircraft's centre of gravity. Judging the flight path consists of comparing the observed path with fixed references such as the horizon, or the X and Y-axis of the aerobatic airspace.

5C.52. Attitude. The aircraft attitude is defined as the position of the aircraft in the sky, and is characterised by the variations it has on the yaw, pitch, and roll axis. In a “no-wind” and normal speed condition, the aircraft’s attitude (its heading) will generally point in the same direction as the flight path. In case of a cross wind, the aircraft attitude must vary (on the yaw axis) in order to maintain a constant and straight flight path, as required by the Large R/C aerobatic power model aircraft rules (Fig. 2).

Also, a reduction in speed will force the aircraft to change its pitch in order to maintain the correct flight path (Fig. 3).

Depending the type of aircraft (low wing, high wing, etc.), the flight attitude might be different from one to another to maintain the correct flight path. Judges should disregard this difference in attitude and only concentrate on the flight path described by the aircraft.

5C.53. Wind correction. When judging a manoeuvre, understanding what constitutes wind correction, and what is not, is one of the toughest challenges. The general rule is that judges should ignore any aircraft change of attitude required to maintain a correct flight path. At the same time, the usual 0.5 point deduction per 5 degrees of deviation shall be applied to anything that is not related with wind correcting. For instance, when the wind is blowing parallel to the flight path, the pilot flying a vertical line might use its elevator to change the aircraft’s attitude in order to maintain a straight vertical flight path (Fig. 4).

This change of attitude should not be downgraded. On the other hand, any bank angle of the wing in the roll axis should be downgraded using the standard rule of 0.5 point deduction per 5 degrees (Fig. 5). The judges should only downgrade for induced pilot corrections and disregard any sudden attitude changes due to wind bumps. Always give the competitor the benefit of the doubt when not sure.

The only manoeuvres that are not to be wind corrected are the ones involving a stalled condition, such as a Stall Turn (otherwise known as “Hammerhead”), Tail Slide, spin and snap roll(s) (otherwise known as a “flick roll”). During the period of time that the aircraft is in a stalled, or near stalled condition, any wind drift should be disregarded by the judges and not downgraded.

Wind correction should be used throughout the aerobatic airspace. Any drift observed on any line (horizontal, 45 degrees or vertical) should be downgraded using the 0.5 point deduction per 5 degrees rule (Fig. 6).

For instance, in the case of a Stall Turn performed with a severe crosswind, the vertical line will start directly after the ¼ loop. This is the first point of reference to be used for the upline. The flight path on the way up is 15 degrees off compared to the perfect vertical up line; the downgrade should then be 1.5 points. When the aircraft starts its Stall Turn, it is in a stalled condition and no downgrade should be applied for wind drift during that time. Once the rotation is complete, a new reference point should be established for the perfect vertical downline.

If the flight path on the downline is 20 degrees off, the downgrade should then be 2 points (Fig. 7).

The competitor is required to make the shape of all manoeuvres perfect regardless of the wind conditions.

Loops and partial loops must be round, vertical lines must be perpendicular to the horizon and horizontal line parallel to the X or Y-axis. For 45-degree lines, judges must make an allowance for the aircraft's position relative to their own.

A true 45 degree line flown at the end of the aerobatic airspace will appear steeper when flown towards the end of the airspace and shallow when flown towards the centre. Judging is of the true line flown and judges should not downgrade the manoeuvre for visual deformation due to the angle it is observed. Always give the competitor the benefit of the doubt when not sure.

5C.54. Grading of Figures: The judges will independently assess the quality of each figure and its components as performed in the sequences, grading with numbers from ten (10) to zero (0) in increments of one-half (0.5) point. A grade of ten (10) represents a perfect figure in which the judge saw no deviations from prescribed criteria.

Remember, it is the judge's job to find fault: be a nitpicker. On the other hand, give a grade of 10 if you see a perfect figure—but if you are really being critical, you won't see too many. Don't get in a rut. Guard against confining your grades in too narrow a range. If you watch carefully and grade consistently, you will find yourself giving an occasional 2, 3, or 4 on some sloppy figures that are not quite bad enough for a zero. You will also be giving an occasional 9 or 10 for the superlative figure which you can find little or no fault.

As a judge, you are expected to grade only against one standard, and that is perfection. The performance of the aircraft, the difficulty in performing a figure (on the basis of your personal experience or perception), the weather condition or the pilot's name and reputation should not be considered in formulating your grade.

5C.6. Grading Principles

5C.6.1. General principles.

When grading the quality of the performance of individual figures, judges should consider the following general principles:

- a: The geometry of the figures (including the shape, radii, angles, flight path, direction of flight, heading and bank angle) must comply with the prescribed criteria.
- b: The precision of the performance compared to the criteria as explained later in this guide.
- c: The smoothness of the performance
- d: The distinctly recognisable start and finish of each figure with a horizontal line.
- e: The figure must be the one depicted on the flimsy (Form B or C) appropriate to the direction of the flight chosen by the pilot to perform and flown in its proper order within the sequence. For figures with a Y-axis component, it is the pilot's discretion, in addition to fly inbound or out bound, as to which direction to fly the turn, left or right. For Family 9, Rotational Elements it is the pilot's discretion to which direction to perform the roll or first roll, if it is unlinked roll combination. In all cases, the figure flown must have the entry and exit direction as depicted on the flimsy appropriate to the direction of flight chosen by the pilot to perform (Form B or C) in the X-axis.
- f: The grading criteria of each component will apply in a combination figure so that one overall grade for the figure will result.
- g: The length of the lines and the size of the radii caused by the flying characteristics of an aircraft are not to be taken into account in the grading.
- h: Negative figures are graded by the same criteria as positive figures.

i: Speed of aircraft is not a criterion. A reduction of grade will be applied for each deviation from the prescribed criteria for the figure. The grade will be reduced by 0.5 points for each 5 degrees of deviation.

5C.6.2: Beginning and ending of a figure. The first figure of a sequence begins at the moment the aircraft departs from its wings-level, horizontal flight path.

A figure is complete at the moment the aircraft returns to a wings-level, horizontal flight path of one fuselage plane length. The only exception to this are the exit lines in the “ARESTI Aerobatic Catalogue (Condensed)”, Families 7.4.3 and 7.4.4 (Square Loops) and 7.4.6 (Octagon Loops). Once a horizontal flight path of one fuselage plane length is established at the end of a figure, the beginning of the next figure is deemed to have occurred (Fig. 8). If an aircraft does not return to wings-level, horizontal flight before commencing the next figure, the one (1) point per figure deduction will be applied. Ref. Rule 5C.7. If the competitor corrects any errors in exit flight path, bank angle, or heading before initiating the subsequent figure, only the first figure shall be downgraded. Failure to correct such errors shall result in a downgrade to both figures.

Fig. 8

The horizontal line prior the maneuver to be judged is also part of this maneuver, and therefore subject to the same downgrades as any other lines.

5C.6.3: Zero. A zero will be given for:

a: Omitting a figure in the program. In this case, only the omitted figure will be zeroed. For instance, if the pilot omits the centre figure and flies straight to do the next figure, only the centre figure will receive a zero and the next figure will be scored normally.

b: Flying a figure that deviates from the ARESTI drawing held by the judges for scoring purposes. For instance, if the pilot flies a Humpty Bump instead of a Stall Turn, the figure will be marked zero (0).

c: Adding a figure to a program will zero the next following correct figure except when it is necessary to perform a Corrective Manoeuvre (c.1) due to the previous figure not being completed as per the program. A zero will be given to the figure immediately following any other added figure, even if the following figure is performed correctly.

c.1: A Corrective Manoeuvre can only be a turn of 270 degrees or less, and /or a roll of 180 degrees or less. In this case, a break penalty will be assessed against the competitor's raw score prior to normalizing.

For instance:

1: If the exit of a figure is done upright instead of inverted (the pilot forgot to perform a $\frac{1}{2}$ roll on the downline), and corrects this by doing $\frac{1}{2}$ roll after the exit, on the horizontal line, the original figure will be marked zero (0) because the $\frac{1}{2}$ roll was omitted on the downline, however the following figure will be scored because this $\frac{1}{2}$ roll was added only to correct the attitude of the aircraft for the beginning of that next figure. (Fig. 9). A break penalty will be applied, see **Rule 5C.6.3.c.1**.

Fig. 9

If part of the maneuver is either omitted or added, all of maneuver #1 must be zeroed. The half roll performed after the end of maneuver #1 will cause a break penalty. Maneuver #2 will be judged.

2: If the pilot exits the figure in the wrong direction on the X-axis (pull instead of push at the bottom of a figure), then adds a 180 degree turn and a 180 degree roll to correct the mistake and comes back to the correct flight direction he/she will be assessed a break penalty, **see Rule 5C.6.3.c.1**.

The original figure will be marked zero (0) because the exit ¼ loop was not performed per the ARESTI, and the following figure will be scored from wings level after the completion of the 180-degree turn.

Note: Corrective actions that exceed 270 degrees of turn or 180 degrees of roll constitute a Break in Sequence.

d: Break in the sequence. A break in the sequence is characterised by a total departure from the sequence to be flown. For instance, a pilot that becomes disoriented; aborts the figure and circles around a couple of times before resuming the sequence again. Another example might be a pilot that aborts a figure thinking that the aircraft has equipment problems, makes a couple of fly-bys in order to confirm that everything is operating normal, and then decides to resume the sequence. A deadstick, or a landing during the sequence shall not be considered as a break and all remaining figures that were not flown will be marked zero (0).

When a Break in Sequence occurs, the figure in progress (at the time of the break) should be marked zero (0) and a break penalty will be assessed against the competitor's raw score prior to normalizing. Situations may occur where a pilot performs an incorrect manoeuvre, resulting in a zero, exits that figure improperly, and then performs a break in sequence. In this instance, the pilot receives a zero for the first failed figure, and a zero for the next figure in which the Break in Sequence occurred.

Resumption of scored flight: The pilot or the caller should visually indicate to the judges his intention to resume the sequence. He should then first establish a wing-level horizontal line, call the restart of the sequence to get the judges' attention, perform the last flown figure that is to be marked zero (0), and continue the sequence from there on. Normal judging will resume after the completion of the marked zero (0) figure.

A break in the sequence related to safety, weather, for collision avoidance, or by request from the judges or the Contest Director will not be penalised.

e: Flying a figure in the wrong direction on the X-axis. The Y-axis is non-directional.

f: Any cumulative deviation in excess of 90 degrees in the roll, pitch or yaw axes that are not related to wind corrections.

g: Any figure or figures started and flown completely or partially on the pilot side of the deadline. The aircraft must clearly penetrate the deadline to receive a zero.

Judges should score each figure independently and not communicate with each other while judging of the sequence. Once the sequence is complete, the judges may, but are not required to, confer and review any figure receiving a zero, but need not agree on the score.

If a judge, for some reason outside the control of the competitor, is not able to follow the model aircraft through the entire figure, the judge will give a mark of "Average" or "AV" to that figure. In this case, the judge's mark for that particular figure will be the average of the numerical marks given by the other judges. If all the judges give a "AV" mark to a figure, then the pilot is allowed to re flight this figure. This reflight should occur on the first flight after the judges' break or last in the round, in front of the same set of judges. The result of the reflight will be final.

5C.7. Basic Components of Aerobatics:

5C.7.1: Lines

All lines are judged in relation to the true horizon and the axes of the Aerobic Airspace. Horizontal and Vertical lines are judged primarily on flight path (Ref Rule 5C.5.3 for wind correction criteria).

All figures begin and end on definite horizontal lines, and both must be present in order to earn a good grade. A competitor who rushes from one figure to another, without showing this horizontal and well-recognisable line will be downgraded by one (1) point for each missing line in each figure affected.

Fig. 11

No visible horizontal line between two maneuvers is a downgrade of (1) point for each maneuver.

Fig. 12

Length of lines A & B are defined as starting on and ending with part loops.

Fig. 13

Humpty: Length A does not need to equal B
Square Loop: Length A shall equal B = C = D

Therefore, leaving out the line between two figures will downgrade the preceding figure by one (1) point and the following figure also by one (1) point. (Fig. 11).

All lines that occur inside a figure have a beginning and an end that define their length. They are preceded and followed by part-loops.

With the exception of Family 3 figures (Three, Four & Eight Corners) and some figures in Family 7 (Loops and Eights), the criterion for the length of lines within a figure states that they do not have to be of equal length (Fig. 12). For example, the length of the lines in a Single Humpty-bump does not need to be equal, but all four lines in a Square Loop must be of equal length (Fig. 13).

Whenever any kind of roll is placed on an interior line, the lengths of the two parts of the line before and after the roll must be equal. Exceptions are when any type of roll follows a spin element. Judges should take care to judge the symmetry of the length of lines in a figure using only the length of the lines and not be elapsed time taken to fly each segment. This difference in length versus elapsed time is most noticeable in figures where rolls are placed on up-lines. As the aircraft loses airspeed, the time it takes to fly a line after the roll will be greater than the time required to fly the line of the same length before the roll.

If within a figure two or more lines must be of the same length, an observed variation is penalised by reducing the grade in the following manner (Fig. 14):

- i- A visible variation = 1 point deduction
- ii- If the lengths vary by 1:2 = 2 point deduction
- iii- And so forth up to a 3 point deduction
- iv- No line before or after roll, 4 point deduction.
- v- No line at all before and after roll = 2 point deduction.

The basis for judging line length is the first line flown. The absence of one of these lines either before OR after a roll has to be penalised by one (1) additional point. IF there are no lines before AND after the roll, the total penalty is two (2) points only.

Example: The competitor is to fly a vertical up-line with a full roll on the line. However, the aircraft is returned to level flight immediately after the roll. The deduction is 4 points: 3 points are deducted because the lines are of vastly different length and another 1 point is deducted because of the absence of one of the lines.

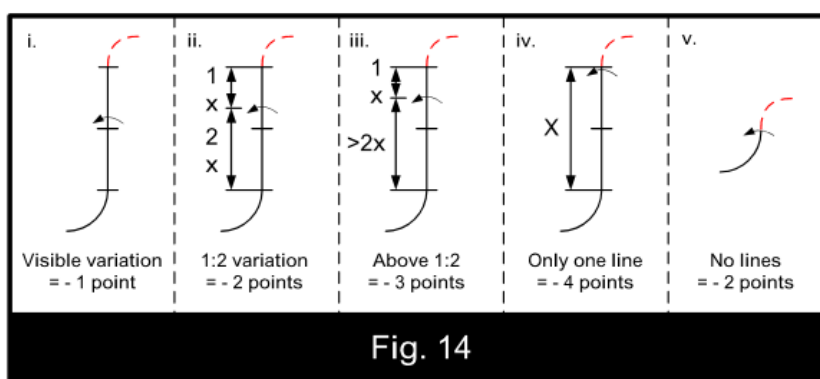

Fig. 14

5C.7.2: Loops and part-loops

The loop is a figure from Family 7, but part-loops are integral to every other family so it is necessary to discuss the loop before going on to the other families.

5C.7.2.1: General criteria

A loop must have, by definition, a constant radius. It starts and ends in a well-defined line that, for a complete loop, will be horizontal. For a part-loop however, such lines may be in any other plane of flight. As the speed changes during execution of a loop or part-loop, the angular velocity around the aircraft's lateral axis also has to change in order to keep the radius constant. When the speed decreases, for example, to half its initial rate, the angular velocity, to keep the same radius, will be reduced by half—this is a fact of physics. Thus, the angular velocity can be an aid for the judge to gauge the radius—especially when the angular velocity in the higher part-loop is seen to be faster, as this is a clear indication that the radius is smaller. This aid becomes more important when a line separates two part-loops. Refer to section 5C.8.7 for specific criteria for judging loops and part loops.

5C.7.2.2: Matching Radii. Certain figures require that the part-loop portion of the figure have the same radius. When identical radii are required depends on the figure in question. This is defined by how a particular figure is depicted (drawn) in the ARESTI Aerobatic Catalogue.

5C.7.2.2a Round Corners For any figure having more than one internal part-loop depicted in the catalogue as an actual round, or looping line, element, all such part-loops must have the same radius – with an exception for all of Family 8.8 (Double Humpty Bumps). For those figures, the radius of the second half-loop is not required to match the radius of the first one.

7.2.2b Corner Angles For any figure having more than one internal part-loop depicted in the catalogue with a hard, or corner, angle, no such part-loop is required to match the radius of any other part-loop depicted in the same figure – with the exception of figures which must maintain a set geometric proportion, i.e.,

- a) All of Family 3 (Combination of Lines)
- b) Family 7.4.3.x to 7.4.6.x (Hesitation Loops)

For example, the quarter-loop at the top of the vertical line (Family 1 figure) need not have the same size radius as the quarter-loop at the bottom (Fig. 15). However, the top radius must not be “corner” or very sharp angle (Fig. 16). It must have a smooth, distinct, and constant radius.

5C.8. FAI “ARESTI Aerobatic Catalogue (Condensed)” Families:**5C.8.1: Family 1: Lines and Angles.**

Family 1.1.1 to 1.1.11 has been fully covered in the preceding section. Note that the figures in Family 1.2.1 to 1.2.16 are NOT performed as drawn in the “ARESTI Aerobatic Catalogue (Condensed)”. In each of these figures there are three looping components: a one-eight loop, a three-eight loop and a quarter loop. Rolls may be performed on the 45-degree line and/or the 90-degree line, with the part line being of equal length. The initial horizontal line and the line at the end of the figure may be flown at different altitudes (Fig. 17).

5C.8.2: Family 2: Turns and Rolling Turns.

5C.8.2.1: Turns. In aerobatic competition, a turn is divided into three parts:

- 1: Establishing the bank using a roll on heading.
- 2: The turn itself.
- 3: A roll back to straight and level flight on heading.

Let's look at the turn during each of these three parts. First, the roll to establish the bank. This must be a roll of between 60 and 90 degrees; it must be performed on the entry heading; and the aircraft must maintain a constant horizontal line. Once the roll is completed and the angle of bank is established, the competitor

immediately performs the turn. The turn must maintain the established angle of bank throughout. The aircraft must also maintain horizontal flight. The rate of turn is constant throughout and the figure must be wind corrected so that, for instance, a 360-degree turn will be a perfect circle. It should be noted that the wind correction cannot be performed by visibly changing the bank angle.

As soon as the aircraft is on the exit heading, the competitor performs another roll at a rate equal to the entry roll. Again, the aircraft must maintain a constant horizontal line.

Downgrades:

a: The angle of bank established by the initial rolling manoeuvre must be at least 60 degrees and not greater than 90 degrees. Any less or more is a 0.5 point deduction for every 5 degrees.

b: The angle of bank, once established, must remain constant. Any deviation is a 0.5 point deduction for every 5 degrees of deviation.

c: The rate of roll must be the same for the entry and exit rolls of this figure. Any deviation is a one (1) point deduction.

d: The aircraft must maintain a constant altitude throughout the figure. Any variation would be 0.5 point deduction for every 5 degrees of change.

e: The rate of turn must remain constant. Any change would be not more than a one (1) point deduction for each change. Note that the rate of turn may appear to change in a strong wind, when it really isn't changing. The judges must always keep the wind in mind and give the pilot the benefit of the doubt if there is any question.

f: The aircraft must begin and end on the prescribed heading. Any deviation is a 0.5 point deduction for every 5 degrees of deviation.

5C.8.2.2: Rolling Turns

The rolling turn is a figure that combines a turn of a prescribed amount with a roll or rolls integrated throughout the turn. The rolls integrated into the turn may be in the same direction as the turn and are called "rolls to the inside" or may be in the opposite direction of the turn and are then called "rolls to the outside" (Fig. 18). There can also be rolls alternating in and out. The direction of these rolls, to the inside or to the outside, must be flown exactly as depicted in the ARESTI. When we say that the rolls are integrated, we are saying that in addition to there being constant rate of turn throughout the figure, there is also a constant rate of roll throughout. Naturally, the one exception to this constant roll rate is the pause when reversing roll direction. In addition, the entire manoeuvre is to be flown at a constant altitude.

To help visualise the execution of this figure and facilitate a way for the judges to determine a constant roll rate, let's look at an aircraft performing a 360 degree rolling turn with 4 rolls to the inside from upright (Family 2.4.7.1). First, on the prescribed entry heading, the pilot executes a turn and simultaneously initiates a roll in the same direction as the turn. The judges will expect the aircraft to be inverted at 45, 135, 225 and 315 degrees and to be upright at 90, 180, 270 and 360 degrees. At these interim headings, the judge will NOT downgrade using the 0.5 point for 5 degree rule but will judge changes in the rate of roll, changes in the rate of turn and changes in altitude. At the end of the 4 rolls, the aircraft must have terminated its 360 degree turn and finish at the same point where it started, wings level and on the prescribed heading.

When a rolling turn is performed with rolls alternating directions, the aircraft must change direction of roll at a wings level attitude. The position of the aircraft in the turn is still only used as an aid to determine if the pilot is varying the rate of roll or turn.

Downgrades:

a: Performing more or fewer rolls than the ARESTI description calls for, or rolling in a direction different than depicted on the ARESTI results in the figure being zeroed.

b: All rolls in a rolling turn are standard rolls. If a snap roll is performed, the figure will be marked zero (0).

- c: Each stoppage of the rate of roll is a deduction of one (1) point.
- d: Each variation in the rate of roll is a one (1) point deduction.
- e: Each variation in the rate of turn is a one (1) point deduction.
- f: Variations in altitude are deducted using 0.5 points per every 5 degrees difference.
- g: 0.5 points per every 5 degrees that the aircraft is not in level flight when reversing roll direction.
- h: 0.5 points for every 5 degrees of roll remaining when the aircraft has reached its heading.
- i: 0.5 points for every 5 degrees of turn remaining when the aircraft has completed its last roll.

5C.8.3. Family 3: Combinations of Lines.

For all the figures in Family 3, (Three Corners, Four Corners, and Eight Corners) the transition from level flight to a 45 degree line should be at a constant and reasonable one eighth (1/8) looping radius. All lines within the figure should be equal in length. All part loops within the figure should be of identical radii. The 45-degree transitions in Family 3 should have a constant radius and not a sharp corner (Fig. 19). The basis for judging line length is the first line flown. Refer to rule 5C.7.1 for downgrades.

The radius of all part loops in the figure are measured against the first part loop flown in the manoeuvre. Thereafter, each part loop flown within the manoeuvre that has a different radius than the first part loop flown receives a one (1) point deduction.

Each part loop flown in the manoeuvre must have a constant radius. Each variation of radius within a part loop receives a one (1) point deduction.

5C.8.4: Family 4: Not in use.

5C.8.5: Family 5.2-5.4: Stall Turns.

Stall Turns, also referred to as “Hammerheads”, are some of the most graceful figures in the “ARESTI Aerobatic Catalogue (Condensed).” In its most basic form, the figure begins when the aircraft leaves horizontal flight and flies a one-quarter loop to establish a vertical climb or flies a one-eighth loop to establish a 45 degree up line. If the entry is a one-eighth loop to a 45 degree line then, having presented that line, the aircraft will fly another one-eighth loop and establish a vertical up line. At the top of the vertical line, the aircraft stops, pivots and establishes a vertical descent. The vertical line may terminate in a one-quarter loop which will return the aircraft to horizontal flight and end the figure. Or, after the vertical descent from the peak, the aircraft may fly a one-eighth loop to a 45 degree down line. Having presented this line, the aircraft will fly another one-eighth loop to return to horizontal flight thus ending the figure.

The judging criteria are:

- a: The up and down lines, vertical or 45 degree, must be wind corrected so that they are flown as a straight line at the correct angle to the horizon.
- b: On the up and down lines, any roll deviation, or deviation of the track of the aircraft in pitch or yaw will result in a deduction of 0.5 points per 5 degrees of deviation.
- c: Any added roll element(s) on the vertical or 45 degree lines must be positioned so that the line segments before and after the roll elements are of equal length (Fig 21).
- d: The length of the up and down lines, vertical or 45 degree need not be equal. Therefore, the altitude of the horizontal lines at the entry and exit of the hammerhead may be different and no downgrade applies for this difference.

e: As the aircraft nears the point where it stops climbing, it must pivot in a plane parallel to vertical. Any alignment deviation from parallel to the vertical should be downgraded 0.5 points for each 5 degrees of deviation.

f: When the aircraft pivots at the top of the vertical line in a stalled or near stalled condition, no deduction should be applied for wind drift during that particular time.

g: In the case of strong cross winds, the aircraft will most probably be “crabbing” to wind correct the up and down lines. The pivot at the top of the line might therefore be less or more than 180 degrees and no downgrade should be applied to it.

h: Any pendulum movement observed after the pivot is subject to downgrade at 0.5 points per 5 degrees of movement off the vertical. This downgrade is applied for each movement either side of the vertical.

When rotating at the top of the manoeuvre, ideally, the aircraft pivots around its centre of gravity. To avoid a deduction, the aircraft must pivot around an axis point, which cannot be farther away from its centre of gravity on the vertical up line than its wingtip ($\frac{1}{2}$ wingspan). The downgrade for this deviation is one (1) point per half wingspan that the point of rotation exceeds the maximum allowed (Fig 22).

Judges must be careful to deduct only for true extended turnaround, and not for any apparent deviation caused by wind drift during the pivot. One way to recognize a “fly-over” from a wind drift will be that the “fly-over” is generally characterised by the continuation of vertical movement and a pivot larger than 4 wingspans. A “fly-over” Stall Turn should be marked zero (0) (Fig 23).

The manoeuvre should also be marked zero (0) if any distinctive backward sliding movement is observed before the start of the pivot, even if the rotation is correctly performed after the slide (Fig. 24). The rate at which the aircraft pivots around its vertical axis is not a judging criterion.

During the pivot, the wings must remain in the vertical geometric plane as dictated by the ARESTI. This alignment must be maintained throughout the pivot, and the aircraft's attitude at the beginning and the ending of the pivot must be absolutely vertical. During the pivot there must be no deviation in pitch or roll. Any pitch and roll deviation observed during the pivot should be downgraded at 0.5 points for each 5 degrees of deviation. Such movement around the roll axis during the pivot is often referred to as “torquing” (Fig 25).

5C.8.6: Family 6.2: Two Line Tail Slides.

All the criteria of the Stall Turn apply to this figure except, of course, for the manoeuvre at the top of the vertical climb. At the point when the aircraft stops climbing, it must slide backwards a visible amount in the vertical plane. The key here is “visible” and “vertical plane.” If the aircraft pivots directly on the top, without any clearly visible slide, the manoeuvre should then be marked zero (0). Following the slide backwards, the aircraft must then tip over and fall through to a diving position. Often the nose will swing back or “pendulum” in pitch past the vertical after falling through.

The figure is not to be downgraded for this, nor downgraded if it does not happen. It is a function of the length of the slide and the type of aircraft, and is not to be considered in grading the figure.

There are two types of Tail Slides: wheels-down and wheels-up. The wheels-down Tail Slide is depicted in the ARESTI diagram with a curved solid line at the top of the Tail Slide symbol (Fig. 26). The wheels-up Tail Slide is depicted in the ARESTI diagram with a curved dashed line at the top of the Tail Slide symbol (Fig. 27).

This figure must be watched carefully, as the aircraft can fall the wrong way (which is graded a zero) with the correct direction of flight and the proper aircraft attitude still maintained.

The judging criteria are:

a: All lines and arcs flown in the figure are to be wind corrected and correctly aligned within the airspace as described in sections 5C.5.3, 5C.7.1 and 5C.7.2. Observed alignment deviations receive a deduction of 0.5 points for each 5 degrees of deviation.

b: Absence of any visible backward slide in the vertical plane zero's the entire figure.

c: On all up and down lines, the roll attitude must be perpendicular to the plane of the main axis of flight, either the X or Y axis. This includes the duration of the fall through. Watch for the aircraft torqueing off the correct plane of flight. Any deviation in roll should be downgraded at 0.5 points per five (5) degrees of deviation.

d: As with the Stall Turn, the aircraft will be in a stalled or near-stalled condition at the top of the vertical line and no deduction for wind drift should be applied during that particular time.

e: The altitude of the entry and exit horizontal lines need not be the same and the figure must not be downgraded if they are different.

f: When rolls are combined with Family 6 figures, the line segments before and after the roll(s) must be of equal length. Refer to rule 5C.7.1 for downgrades.

g: After performing the Tail Slide at the peak of the manoeuvre, the aircraft must establish a visible vertical down line. If this line is omitted, a downgrade of one (1) point is to be applied.

In summary, the aircraft should make a smooth and steady transition up to vertical flight, and the aircraft should come to a complete stop in this attitude. After sliding backward a visible amount, it should fall through in the appropriate direction without dropping a wing or the nose moving off axis, and recover on the same plane as that of entry. After completion of this, it should again project the 90-degree down line (wind corrected if required) before transitioning into horizontal flight.

5C.8.7: Family 7: Loops and Eights.

5C.8.7.1: General Principles:

Family seven figures are covered in the following sections in groups, sections 5C. 8.7.2 to 5C.8.7.8. Each section provides the manoeuvre description and the overall judging criteria for the group. Each section also provides, for the most part, the downgrades to be applied for deviations. However, some downgrades in some of the sections are not completely specified and, as such, are described here:

a. The size of a loop or part loop is not a grading criterion. It will vary according to the flight characteristics of the aircraft. A large loop is not graded any higher or lower than a small loop, but any variation to the radius will downgrade these figures.

b. All radii are to be constant. Each visible variation in the radii in a loop or part loop is to be downgraded by one (1) point.

c. Where radii of part loops within these figures are required to be the same and they are not, a downgrade of one (1) point is to be applied for each mismatch. The standard is the first part loop flown within the figure.

d. Where complete loops or part loops within these figures are required to be the same size and they are not, a downgrade of one (1) point per mismatch is to be applied.

e. Roll elements that are to be done on a line must be centred and are to define two equal length line segments, one either side of the roll element. Refer to rule 5C.7.1 for downgrades.

f. Where a roll element is to be done entering or exiting a part loop there is to be no line shown between the part loop and the roll element. The downgrade for showing a line in these situations is a minimum of two points.

g. Where a roll element is to be done on a line between two vertical half loops, or between two full loops that form a vertical eight, and the line is absent, a downgrade of two (2) points is to be applied. There are to be no lines before or after the roll element and, if present, each such added line should result in a two (2) point deduction.

5C.8.7.2: Family 7.2: Half Loops

The half-loops in this sub-family must be of a constant radius and wind-corrected to appear as a perfect half circle (see full loop discussion below). When a half-loop is preceded by a roll or rolls, the half-loop follows immediately after the roll(s) without any visible line. Drawing a line requires a downgrade of at least two (2) points depending on the length of the line drawn. Should the half-loop begin before the roll is completed, the judge must downgrade the figure 0.5 points for every 5 degrees of half-loop flown on which the roll was performed.

The half-loop followed by a roll is also flown with no line between the half-loop and roll. Again, drawing a line requires a downgrade of at least 2 points depending on the length of the line drawn (Fig. 29). Should the roll begin before the half-loop is completed, the judges must downgrade the figure 0.5 points for every 5 degrees of half-loop on which the roll was performed (Fig. 30). Great care should be taken here to differentiate between aircraft airfoils and the slow speed at the top of the half loop + roll manoeuvre. The aircraft will appear to begin the roll before reaching horizontal flight due to its high pitch attitude. As the aircraft accelerates, it will then establish a cruise pitch attitude.

5C.8.7.3: Family 7.3: Three-Quarter Loops

Sometimes referred to as "Goldfish" (Fig 31), the lines are judged with reference to the 45 degree flight path. Any rolls on the 45 degree lines must be centred on that line. It is not required that the lengths of the 45 degree lines bear any strict relation to the diameter of the three-quarter (3/4) loop. That is, the entry and exit altitudes do not need to correspond to the altitude limits of the loop.

5C.8.7.4: Family 7.4: Whole Loops

5C.8.7.4.a: Round Loops (7.4.1 – 7.4.2)

All whole round loops must appear perfectly round to the judge (Fig 33). If required, they must be wind corrected to have a constant radius. This wind correction is not only with regards to the roundness of the loop but also for the effect of any crosswind on the figure. Therefore, a standard deduction of 0.5 points per five (5) degrees should be applied if the finish point is displaced in a direction perpendicular to the plane of the loop (Fig. 34). In a heavy crosswind situation, a loop might be flown with visible crabbing and no deduction should be applied in this case.

Fig. 29

Drawing a line after the 1/2 loop is a minimum downgrade of 2 points.

Fig. 30

Aircraft starting the roll ten degrees early before reaching horizontal flight = - 1 point

Fig. 31

Three-Quarter Loops or "Goldfish"

Fig. 33

Full loops must appear perfectly round to the judges.

To better quantify deductions for loops, the judges should watch for these irregularities: perpendicular displacement, change of radius, aircraft roll and flat spots (aircraft without a flight path radius) within the loop.

Deductions are as follows:

- As stated in first paragraph, 0.5 points per five degrees for perpendicular displacement.
- A variation in the radius will be a one point deduction per occurrence.
- Aircraft displaying any roll other than during a roll element on the loop, 0.5 point per five degrees of roll.
- Flight path without any radius (straight line or "flat spot"), one point per occurrence.

In judging loops, a common error is for the vertical diameter of the loop to be larger than the horizontal diameter. This is often called an "L" shaped loop (Fig. 35). Less common are loops with a horizontal diameter greater than the vertical. This is called an egg-shaped loop (Fig. 36).

Another common error is in varying the radius of the final quadrant performing an "e" shaped loop (Fig. 37). The downgrades listed above should be applied for each of these errors.

If there is a rolling element (roll, point rolls or snap roll) at the apex of the loop, it must be centred in the loop and flown on the arc of the loop itself (Fig. 38). Flying the roll on a line at the apex of the loop is at least a two (2) point downgrade. If the roll is not centred, it must be downgraded 0.5 points for every five degrees that it is off centre.

5C.8.7.4.b: Family 7.4.3- 7.4.6: Square, Diamond and Octagon Loops

Square and Octagon loops are flown as hesitation loops with lines of equal length and partial loops with equal radii (Fig. 39). Square and Octagon loops are not considered complete until the last horizontal line is drawn equal to the length of the first line of the figure.

All horizontal, vertical, and 45-degree lines are judged on flight path and should therefore be wind corrected. As such, the judge should always expect to see these figures closed, the same way as a round loop.

Where rolls are flown on the Square or Diamond loops, they must be centred on the line. Aids for judging all hesitation loops are that a good performance will contain changes of angular velocity in all the partial loops, and variations of time taken to draw the length of each interior line, which also varies according to the aircraft's speed. The rhythm of all these partial loops is a help for judging.

cont.../

5C.8.7.4c: Family 7.4.7-7.4.14 Reversing Whole Loops

Reversing Whole Loops shall be judged using the same criteria for Whole Loops. No line is to be flown between the $\frac{1}{4}$ and $\frac{3}{4}$ loop segments, and the radii of all loop segments must be equal (Fig 39a). Drawing a line between the loop segments requires a downgrade of at least two (2) points depending on the length of the line drawn. Rolls placed either before or after the Reversing Whole Loop shall be flown with no line segment between the roll and the loop. Drawing a line requires a downgrade of at least two (2) points depending on the length of the line drawn. Any rolling element flown at the apex (top of loop) or bottom of the loop shall be judged in accordance with the rules for Whole Loops found in paragraph 8.7.4.a.

5C.8.7.5a. Family 7.5.1-7.5.8: Horizontal “S”s

Horizontal “S”s may be described as two Half Cubans joined together, sharing a common 45 degree line. In these figures, both $\frac{5}{8}$ ths loops must have the same radii (Fig 39b). When the looping portion of the figure is immediately preceded by (on entry) or followed by (on exit) a roll or rolls, there must be no visible line between the roll and loop elements. Drawing a line requires a downgrade of at least two (2) points depending on the length of the line drawn. This criterion is not meant to imply that one element (roll or loop) must start before the preceding element is completely finished. A brief hesitation between elements (similar to opposite rolls) should not be downgraded.

Any rolls that are placed on the 45-degree line (between the two $\frac{5}{8}$ ths looping portions) must be centred on the line, and do not follow or precede the looping portions as described above.

5C.8.7.5b. Family 7.5.9-7.5.10: Vertical “S”s

These figures are accomplished with two joined half-loops flown in opposite directions (Fig. 40). Look for both half-loops to be the same size and perfectly round. The half-loops should be a continuous looping figure when there is no half roll between the half-loops. When a half roll is performed between the half loops (full roll(s) are not authorized), there is no line before or after the half roll. However, the half roll is flown on a horizontal line which begins as soon as the first half-loop is finished. As soon as the half roll is finished, the next half-loop must begin immediately (Fig. 41). Adding a line at either of these points is at least a two (2) point deduction, depending on the length of the line.

5C.8.7.6: Not in Use**5C.8.7.7: Not in Use****5C.8.7.8a: Family 7.8.1 - 7.8.8: Horizontal Eights**

Also referred to as “Cuban Eights,” the $\frac{5}{8}$ ths and $\frac{3}{4}$ loops must have the same radii; lines between the loops flown at exactly 45 degrees (Fig. 42). Wind correction shall be applied throughout the figure so that the 45-degree lines intersect at the exact mid-point of the Horizontal Eight. If there are roll elements on the 45 degree line(s), they will be positioned so that the lines before and after the roll are of equal length.

When the $\frac{5}{8}$ ths loop portion is preceded or followed by a roll element, there must be no visible line between the roll element and the $\frac{5}{8}$ ths loop. Inserting a line between the roll element and $\frac{5}{8}$ ths loop portion requires a minimum downgrade of 2 points.

The start and finish of the figure and the bottoms (or tops if reversed) of the $\frac{5}{8}$ ths and $\frac{3}{4}$ loops must be at the same altitude.

The radius of the 1/8 loop between the 45 degree line and horizontal flight need not equal the radii of the 5/8ths and 3/4 loops of the Horizontal 8.

5C.8.7.8b: Family 7.8.9 - 7.8.16: Horizontal Super “8”s

Besides possessing the unique characteristic of containing three 45-degree lines on which rolls may potentially be placed, this family can be thought of as two linked Three-Quarter Loops (Family 7.3).

The radii of the two 3/4 loops must be identical to each other. Each of the 45-degree lines may be of different lengths, but any rolls placed on them must be centred. The two 3/4 loops need not occur at the same altitude, nor is there any relationship between the horizontal entry/exit altitude and the altitude limits of the two 3/4 loops (Fig. 43).

5C.8.7.8c: Family 7.8.17 – 7.8.22: Vertical “8”s

These figures are performed by flying two loops, one above the other (Fig. 44).

Sub-family 7.8.17-7.8.20 is composed of two loops, both above or both below the entry altitude. Sub-family 7.8.21 - 7.8.22 is composed of one loop above and one loop below the entry altitude. In case, the entry and exit altitude must be the same.

These figures may be combined with various types of half rolls. When a half roll is performed between the loops, there is no line before or after the half roll. However, the half roll is flown on a horizontal line that begins as soon as the first loop is finished. As soon as the half roll is finished, the next loop must begin immediately. Adding a line at either of these points is at least a two (2) point deduction depending on the length of the line. These figures are to be graded using the same criteria as full loops. Additionally, both loops must be of the same size. Unless there is a half roll between the loops, they must be directly above one another. Here as well, the beginning and the end point of the manoeuvre will not be in the same vertical plane if a half roll is flown between the loops (Fig. 45). This should not be a reason for downgrade.

5C.8.8: Family 8: Combination of Lines, Loops, and Rolls

5C.8.8.1 – General Principles:

Family 8 figures are covered in the following sections. Each section provides the manoeuvre description and the overall judging criteria for the group. Each section also provides, for the most part, the downgrades to be applied for deviations. However, some downgrades in some of the sections are not completely specified and, as such, are described here.

a. The size of a loop or part loop is not a grading criterion. It will vary according to the flight characteristics of the aircraft. A large loop is not graded any higher or lower than a small loop, but any variation to the radius will downgrade these figures.

b. All radii are to be constant. Each visible variation in the radii in a loop or part loop is to be downgraded by one (1) point.

c. Where radii of part loops within these figures are required to be the same and they are not, a downgrade of one (1) point should be applied for each mismatch. The standard is the first part loop flown within the figure.

d. Roll elements that are to be done on lines must be centred and are to define two equal length line segments either side of the roll element. Refer to rule 5C.7.1 for downgrades.

e. Where a roll element is to be done entering or exiting a part loop there is to be no line shown between the part loop and the roll element. The downgrade for showing a line in these situations is a minimum of two points. This criterion is not meant to imply that one element (roll or loop) must start before the preceding element is completely finished. A brief hesitation between elements (similar to opposite rolls) should not be downgraded.

5C.Sections 8.8.1 to 8.8.3: Not in Use.

5C.8.8.4.1: Family 8.4.1 - 8.4.28: Humpty Bumps and Diagonal Humpty Bumps.

These figures, whether vertical or performed with 45-degree lines, are judged as combination of lines and loops. Half loop must still have a constant radius from the time they depart the vertical or 45-degree line. This requires a change in angular velocity during the half loop. The lines in these figures may be of different lengths, and therefore the entry and exit altitudes of these figures can be different. Rolls on any of these lines must be centred (Fig.46).

5C.8.8.5: Family 8.5.1-8.5.24: Half Cubans and Vertical 5/8ths Loops.

In these figures, when the looping portion of the figure is immediately preceded or followed by a roll or rolls, there must be no visible line between the roll and loop elements. The rolls on vertical and 45-degree lines must be centred, except for roll(s) following a spin. Angles drawn in the "ARESTI Aerobatic Catalogue (Condensed)" (Fig. 47), are to be flown as partial loops. No such part-loop is required to match the radius of any other part loop depicted in the same figure.

5C.8.8.6: Family 8.6: "P" Loops and Reversing "P" Loops

When $\frac{1}{4}$, $\frac{1}{2}$ or $\frac{3}{4}$ loops join each other in these sub-families, the radii must be equal and there is no line between the loops. Inserting a line between joined loop segments requires a minimum two (2) point deduction depending on the length of the line (Fig. 49).

Roll elements on the vertical line must be centred.

Roll elements at the apex of the loop must be centred in the loop and flown on the arc of the loop. Flying the roll on a line at the apex of the loop is at least a two (2) point downgrade. If the roll is not centred, it must be downgraded 0.5 points for every five degrees that it is off centre.

When a loop portion is preceded or followed by a roll element, there must be no visible line between the roll element and the loop portion. Inserting a line between the roll element and loop portion requires a minimum downgrade of 2 points.

The $\frac{1}{4}$ loop to or from horizontal flight should have a reasonable radius, but need not match the other looping radii (fig.48a).

cont/...

5C.8.8.7: Family 8.7: 7/8ths loops

Sometimes called “Q Loops”, these figures consist of a 7/8ths loop with either a 45 degree entry or exit line. The 1/8th loop to or from the 45 degree line should have a reasonable radius, but need not match the radius of the 7/8ths loop. (fig.49b)

Roll elements on the 45 degree line must be centred. Roll elements at the apex of the 7/8ths loop must be centred on the loop and flown in the arc of the loop. Flying the roll on a line at the apex of the loop is at least a two (2) point downgrade. If the roll is not centred, it must be downgraded 0.5 points for every five degrees that it is off centre.

When the 7/8ths loop is preceded or followed by a roll element, there must be no visible line between the roll element and the loop. Inserting a line between the roll element and 7/8ths loop requires a minimum downgrade of 2 points.

Note: for certain types of “Q” Loops in this family, rolls are not allowed at the apex of the 7/8th loop (for example, figures 8.7.x.3 and 8.7.x.4).

5C.8.8.8: Family 8.8: Double Humpty Bumps

These figures are generally judged using the same criteria as Single Humpty Bumps (see section 5C.8.8.4.1). The two half-loops are not required to match each other, nor are they required to match the entry/exit loop radii. As with Single Humpty Bumps, the entry and exit altitudes need not be equal (Fig.49a).

5C.8.8.9: Not in Use**5C.8.8.10: Family 8.10: Reversing 1 ¼ Loops**

The ¾ and ½ loops in these sub-families must be the same size and are flown as continuous segments with no line between the loops. Inserting a line between joined loop segments requires a minimum two (2) point deduction depending on the length of the line.

Roll elements on the vertical line must be centred.

When the ¾ loop is preceded by a roll element, there must be no visible line between the roll element and the loop portion. Inserting a line between the roll element and loop portion requires a minimum downgrade of 2 points.

The final ¼ loop to horizontal flight should have a reasonable radius, but need not match the other looping radii.

5C.8.9: Family 9: Rotational Elements

Rolls (9.1 - 9.10) may be performed on horizontal, 45-degree or 90-degree lines, on complete loops, between part-loops, between part-loops and line, and following spin elements. They may be ¼, ½, ¾, or a full 360 degrees in their rotation, up to two consecutive full rolls. Additionally, rolls may be flown in combination with turns as prescribed in Family 2 (Rolling Turns). In all cases, the same criteria apply: The rate of roll must be constant throughout the roll(s). The aircraft should continue to project, during the rolling portion, the prescribed plane and direction of flight.

Multiple rolls may be linked, unlinked or opposite:

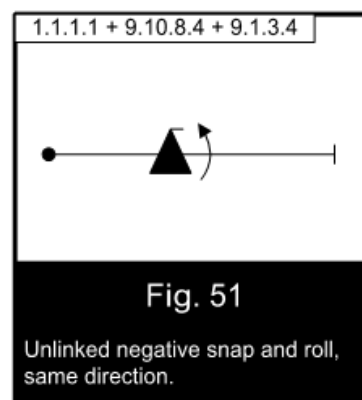

a: When rolls are in continuous rotation, the tips of the symbols are linked by a small line. When flying linked rolls, there is no pause between them (Fig. 50). Should there be one; the figure should then be marked zero (0).

b: Unlinked rolls must be of different types, the two types being defined as follows:

Type I: Aileron rolls (rolls and point rolls)

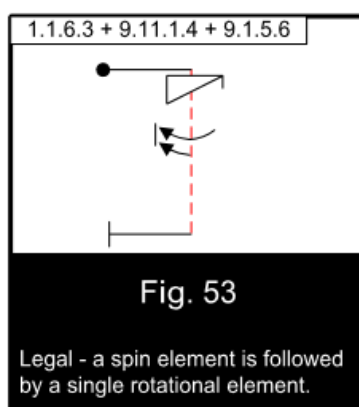

Type II: Snap rolls (positive and negative) – also referred to as “Flick Rolls”.

No line links the symbols, though their tips are drawn pointing in the same direction (i.e. on the same side of the line). Unlinked rolling elements must show a brief but perceptible pause between the elements that comprise the rolling combination. Absence of a perceptible pause between elements of the combination shall be downgraded by 1 point. This downgrade applies if the direction of rotation is required to be the same or opposite. (Fig. 51)

c: Opposite rolls may be either of the same or different type. In opposite rolls, the tips of the symbols are drawn on opposite sides of the line, indicating they are to be flown in opposite directions of rotation. The pilot may elect to fly the first roll in either direction, but the second roll must be the opposite direction to the first. Opposite rolls, including those in rolling turns should be flown as one continuous manoeuvre - the brief pause between opposite rotations should be minimal (Fig. 52). If the two rolls are of the same type, they must be flown in opposite direction if they are not linked.

d: Either aileron rolls or snap rolls may follow spin elements (Family 9.11 or 9.12). A spin and a roll combined on the same vertical downline will always be unlinked. They may be flown either in the same or opposite direction, as shown by the position of the tips of the symbols on the ARESTI diagram. The spin will always be the first element with a maximum of two (2) turns. It can be followed by a second rotational element like a roll or a snap roll also limited to a maximum of two (2) turns (Fig. 53). Adding a third rotational element will make the manoeuvre illegal, i.e. a one turn spin combined with one opposite roll and one opposite half roll (Fig. 54).

5C.8.9.1: Family 9.1: Rolls

The penalty for varying the rate of roll is one (1) point per variation. Any stoppage in the roll that could result its being considered a point roll would grade the figure zero (0).

The finish of the roll must be as crisp and precise as possible. Coming to a slow finish in fact represents a change in the rate of roll and should be penalised accordingly.

The wing must stop precisely after the desired degree of rotation and not go past the stop point and then return. This is referred to as “bumping the point” and a deduction of 0.5 points per 5 degrees shall be given in this case.

5C.8.9.2: Family 9.2 - 9.8: Point Rolls. Point Rolls

These rolls are judged on the same criteria as the standard roll, only the aircraft stops rotation during the roll for a pre-stated number of times, i.e. 2, 4, or 8. The rate of the roll and the rhythm of the points must be constant throughout with the aircraft projecting the pre-stated plane and direction of flight.

The pauses will be of identical duration and the degree of rotation between each pause shall be 180 degrees, 90 degrees, or 45 degrees, as depicted by the Aresti diagram. Each visible variation in the duration of the pause segments is downgraded by one (1) point. Errors in degrees of rotation (under / over rotating the points) are downgraded at a half (.5) point per five (5) degrees.

The roll rate of the rolling segments must be constant with each roll segment matching that of the preceding segment. Any visible deviation in roll rate from one segment to the next, or within a segment, is to be downgraded by one (1) point per occurrence.

The duration of the rolling segments as compared to the pause segments need not be equal. Each pause of a point roll must be clearly recognisable in every case. If a pause is not recognisable or is omitted, the figure is graded a zero (0).

5C.8.9.3: Family 9.9: Snap Rolls (“Flick Rolls”)

Snap rolls may be positive (pitch to the canopy) or negative (pitch to the wheels). Other than this difference, all judging criteria are the same for either type of snap.

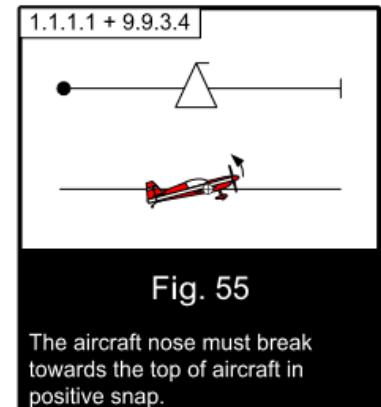

Snap rolls are difficult to judge due to the speed of the snaps and the variation in the manner in which different aircraft perform snaps. However, two things must be present in order that a judge can decide that a snap roll has occurred. They are:

- The nose must pitch in the correct direction as indicated by the ARESTI figure (Fig. 55 & 56).
- Autorotation must be initiated.

Given the high energy nature of the snap, it is very difficult to tell if these two items are occurring simultaneously or sequentially. Therefore, there is no requirement that these two movements start simultaneously. They may occur simultaneously or sequentially in the order presented.

The requirements and downgrades that apply to snap roll elements are:

- The snap must be done in the correct direction, positive or negative. If done in the wrong direction the manoeuvre is to be zeroed. Judges must watch very carefully for this as, due to the speed of the snap, it is very possible to miss an incorrect direction of the pitch.
- There must be departure in the pitch axis in the required direction of the snap. Without some displacement in pitch there can be no high speed stall and therefore, there can be no snap. Aerobatic aircraft with very high rates of roll can occasionally fool a judge and present an aileron roll in place of a true snap. The movement of the aircraft's nose in pitch departing the flight path is a necessary clue to the proper execution of snap rolls. As always, the competitor is given the benefit of the doubt, but if a judge is certain that a proper snap roll has not been executed, a zero (0) is to be given.
- Autorotation must be initiated either simultaneously with the pitch departure, or immediately subsequent to it. No downgrade is to be applied if these two motions occur sequentially in the order just stated. Autorotation is difficult to discern but a definite clue is that there will be a yaw component to the rotation. Lacking any visible yaw, the aircraft will be rotating only on its roll axis and not presenting a true snap. As always, the competitor is given the benefit of the doubt, but if a judge is certain that autorotation is not present and therefore that a proper snap roll has not been executed, a zero (0) is to be given.
- Any rotation / roll observed prior to the required pitch movement is to be downgraded 0.5 points for each 5 degrees of such rotation.
- In the event that the start of autorotation is delayed somewhat after the required pitch movement has been shown, it is possible that the aircraft will draw a visible line between the pitch and the start of autorotation. If this occurs, the manoeuvre should be graded zero (0).
- Autorotation, once initiated, must be maintained to the prescribed finish point of the snap roll. Coming out of autorotation early and aileroning to the end of the snap is a common error. In this case, a downgrade of 0.5 points for each 5 degrees is to be applied for the amount of rotation remaining at the point the autorotation ends, i.e., for however much the pilot ailerons to the finish. If the autorotation ends with more than 90 degrees of rotation remaining, even if the roll is completed with aileron, the snap roll is to be graded zero (0).
- Alignment during the snap will vary from the prescribed line of flight due to the yaw displacement that is characteristic of a proper snap. This variation may be very small. However, immediately on completion of

autorotation, the aircraft must be realigned with the prescribed line of flight. This will put the aircraft on a parallel but offset line or arc from that being flown prior to entry to the snap. If the aircraft exit from the snap is a line or arc that is identical to the entry line this is a clue that a proper snap was not executed. Again, the offset of the snap exit line or arc from snap entry line or arc may be very small but should be there. No penalty is to be applied for the offset or the realignment of the aircraft immediately after autorotation is completed. Lacking that realignment the extension of the snap exit line will be misaligned and that should be downgraded at 0.5 for each 5 degrees of misalignment from the prescribed line of flight in pitch, roll and yaw. "Line of flight" as just used here includes arcs.

5C.8.9.5: Family 9.11 - 9.12: Spins

Spins may be positive (entered from upright flight) or negative (entered from inverted flight). Other than this difference all judging criteria are the same for either type of spin.

Spin elements may be included in a number of Family 1 and Family 8 figures (where so indicated by the optional spin symbol in the ARESTI catalogue). All spins begin from horizontal flight with a defined entry line. This entry line to the spin is to be judged and downgraded as required in the same manner as any other wind corrected horizontal line. The only exception to judging the entry line is if the spin entry line is also the entry to the sequence. In this instance, the entry line is not judged and judging begins at the spin stall break. It should be noted that the flight path of the spin entry line should remain constant and not be influenced by the change of pitch attitude required to achieve the stall (Fig. 57), i.e., judge the track.

When the aircraft stalls, the nose will fall and at the same time a wing tip will drop in the direction of the spin initiating autorotation. The fall of the nose and the drop of the wing are to occur simultaneously. Failure to achieve this is to be considered a "late entry" and is to be downgraded. After completion of the prescribed number of turns, the aircraft must stop rotating precisely on the prescribed heading and then a wind corrected vertical down line must be shown. If a roll element follows a spin, there should be a brief, but perceptible pause (similar to unlinked rolls) between the spin and the roll. Because there is no vertical line before the spin, there is no criterion to centre a roll element that follows the spin on the vertical down line. No account is to be taken of the pitch attitude of the aircraft during autorotation, as some aircraft spin in a nearly vertical pitch attitude while others may spin in a somewhat flat attitude. Given these varying attitudes some aircraft may require a visible downward movement in order to set the aircraft into position to fly the required vertical downline after completion of autorotation. No downgrade is to be applied for this downward nose movement. Also, the speed of autorotation is not a judging criterion.

The requirements and downgrades that apply to spin elements are:

a. The entry line to the spin is a wind corrected line and any deviation in pitch, roll or yaw is to be downgraded at 0.5 points per each 5 degrees of misalignment. However, be sure to judge the track and not the attitude.

b. At the point of stall, the wings are to be level and any deviation in roll will be downgraded at 0.5 degrees for each 5 degrees of deviation. However, at this point in the spin element, when the aircraft is stalled or near stalled, no penalty should be applied for deviation in yaw due to wind. Also, due to wind the yaw attitude of the aircraft relative to the prescribed degree of rotation may result in actually rotating more or less than prescribed (Fig. 58). No penalty is to be applied for this variation provided it results from the effect of wind on the spin entry.

c. There must be a stall in order to have a proper spin. As always, the competitor is given the benefit of the doubt, but if a judge is certain that no stall occurred, a zero (0) is to be given.

d. The stall and the wing drop that indicates the start of auto rotation are to occur simultaneously. If they do not occur simultaneously, a downgrade of 0.5 points for each 5 degrees of movement that occurs in one movement before the other movement is shown, e.g., if the nose drops 20 degrees before the wing drop is shown a 2 point penalty is applied.

e. Starting the spin rotation in the wrong direction of rotation with a subsequent correction that forces the aircraft into the proper direction of rotation is to be penalised. Rotation movement in the incorrect direction is to be downgraded at .5 point for each 5 degrees of incorrect rotation.

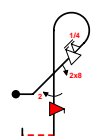

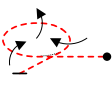

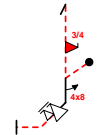

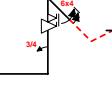

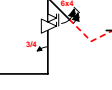

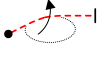

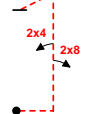

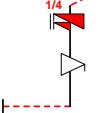

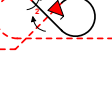

f. The rotation in a spin must be autorotation which can be difficult to discern. A clue to making the judgment on "autorotation or not" is that autorotation will have a visible yaw component to the rotation. Absent this yaw component, it is probable that the aircraft is in some kind of an aileron roll. If a judge is certain that no autorotation occurred, a zero (0) is to be given.

g. The spin element must complete precisely at the degree of rotation called for by the ARESTI and not be short or beyond the prescribed end point of the rotation. Any deviation is to be downgraded 0.5 points per 5 degrees that the aircraft completes the spin short or long of the prescribed stopping point. Note that autorotation must carry to completion. It is common to see a pilot come out of autorotation early and aileron to the finish of the spin. If this occurs a penalty of 0.5 points per 5 degrees is to be applied for the amount of "aileroning" used to complete the required rotation.

h. Upon completion of the prescribed degree of rotation a vertical down line is to be shown. Omission of this line is to be downgraded one (1) point. Note that roll or snap elements may be called for on this down line after a spin. If they are called for, no centring requirement applies to the placement of these elements on this down line.

PAGE DELIBERATELY LEFT BLANK

5.9. CLASS F3P – INDOOR RADIO CONTROL AEROBATIC POWER MODEL AIRCRAFT**5.9.1 Definition of an R/C Indoor Aerobatic Power Model Aircraft**

As 5.1.1 except that variable thrust direction of the propulsion device(s) is allowed for F3P-AFM.

5.9.2 General Characteristics of R/C Indoor Aerobatic Power Model Aircraft

As 5.1.2 except for the following:

Maximum total weight 300g

External parts that protrude which could be considered dangerous, (ie landing gear struts, shaft tips etc) must be covered in order to avoid injuries.

Power device limitations: any suitable power device may be utilised except those generating any kind of exhaust emission.

5.9.3 Definition and Number of Helpers

See 5.1.3 except for the following:

A helper may be a Team Manager, another competitor or an officially registered supporter. Each pilot is permitted one helper during the flight.

5.9.4 Number of Flights

Competitors have the right to the same number of flights. Only completed rounds will be counted.

5.9.5 Definition of an Attempt

See 5.1.5

5.9.6 Number of Attempts

See 5.1.6

5.9.7 Definition of an Official Flight

See 5.1.7

5.9.8 Marking

See 5.1.8 except for the following:

- (a) The manoeuvring area is limited by the floor, ceiling, and walls of the hall, as well as by the safety line which is parallel to the longest wall of the hall and in front of the judges. A model aircraft must never cross this safety line. The centre line of the manoeuvring area stretches from the safety line (perpendicular) to the opposite long wall, and is positioned in the middle between the side walls. The competitor is normally placed on the intersection of the safety line and the centre line.
- (b) The recommended dimensions of the hall should be about 40 x 20 metres in length and width and between 8 to 12 metres in height.
- (c) Centre manoeuvres should be positioned equally above the centre line of the manoeuvring area, with turn around manoeuvres at the left or right of it. Infractions of this rule will be cause for downgrading by each judge individually and in proportion to the degree of infraction.
- (d) Aerobatics Freestyle to Music (AFM) are judged for flying style, artistic quality, and overall performance, in marks of whole number increments between 10 and 0 by each of the judges for the overall flight.
- (e) Judges shall be seated on a line parallel to the longest wall of the hall and in the middle between its side walls, while viewing the opposite longest wall.

5.9.9 Classification

See 5.1.9 except for the following:

For World and Continental Championships, each competitor will have four (4) preliminary flights (schedule F3P-AP), with the best three normalised scores to determine the preliminary ranking. The top 25% (twenty-five percent) of the classified competitors with a minimum of ten (10) will have three (3) additional flights. These final flights will be flown as a known, finals schedule (schedule

F3P-AF). The total of the best three preliminary flights normalised again to 1000 points will count as one score. This score and the three finals scores will give four (4) normalised scores. The sum of the three best will give the final classification. In the case of a tie, the sum of all the four (4) scores will determine the winner.

Note 1: Final flights to determine the individual winner are only required for World and Continental Championships

5.9.10 Judging

- a) For each competition in F3P, there must be a minimum of three (3), and a maximum of five (5) judges, plus one timer.
- b) For larger events, there might be several panels of judges.
- c) For World or Continental Championships the organiser must appoint one or more panels of five judges each. The judges must be of different nationalities. Those selected must reflect the approximate geographical distribution of teams having participated in the previous World Championships and the final list must be approved by the CIAM Bureau. At least one third, but not more than two thirds of the judges must not have judged at the previous World Championship. Judge assignment to the panels will be by random draw.
- d) The invited judges for World or Continental Championships must be selected from the applicable list of current or upcoming approved FAI international judges and must have had a reasonable amount of F3P or F3A judging experience and must submit a resume of his judging experience to the organiser when accepting the invitation to judge at a World or Continental Championship. The organiser must in turn submit the resumes to the CIAM Bureau for approval.
- e) To avoid errant judging, it is recommended that training flights be performed, before the beginning of official flying. These training flights are judged and tabulated according to the regulations, but the results are not made public.

5.9.11 Organisation for R/C Indoor Aerobatic Contests

See 5.1.11 except for the following:

- a) If his FM frequency is clear the competitor will be given his FM transmitter when he occupies the starting area so that he can perform a radio check. If there is a FM frequency conflict he must be allowed a maximum of one (1) minute for a radio check before the start of the one (1) minute starting time. The timer will notify the competitor when the minute is finished and immediately start timing the one (1) minute starting time. According to paragraph 5.1.2. the voltage of the propulsion battery of electric powered models must be checked by an official in the preparation area before the 1-minute starting time is started.

5.9.12 Execution of Manoeuvres

- a) In the preliminary flights (schedule F3P-AP) and the finals flights (schedule F3P-AF), the manoeuvres must be executed during an uninterrupted flight in the order that they are listed in the schedule. The competitor may make only one attempt at each scored manoeuvre during the flight. The direction of take-off is the pilot's choice. The direction of the first manoeuvre determines the direction of all following manoeuvres.
- b) In schedules with turn around manoeuvres, there is no unjudged flying between the first manoeuvre after the take-off and the last manoeuvre before landing.
- c) In AFM, judging is done for the entire flight, without interruption.
- d) If the model aircraft touches the floor, ceiling, walls, or any structures or fixtures of the hall, or crosses the safety line during a manoeuvre, this manoeuvre is scored ZERO.
- e) In AFM this rule only applies regarding the safety line.
- f) The competitor may make only one attempt at each manoeuvre during the flight. The pilot has one (1) minute starting time and five (5) minutes to complete his flight, both the one (1) minute and the five (5) minutes begin when the competitor is given permission to start.
- g) In AFM the competitor has to signal the operator of the music his wish to start the music within the first minute.

- h) The duration of the music must be 120 +/- 5 seconds. Judging of the flight starts with its beginning.
- i) The model aircraft must take-off and land unassisted, that is, no hand launched flights. If any part of the model aircraft is dropped or if it comes to stand still during the flight, scoring will cease at that point and the model must be landed immediately.
- j) In AFM this rule only applies regarding the take-off.
- k) Scoring will cease at the expiry of the five (5) minutes time limit.
- l) In AFM the flight ends at the stop of the music, or 125 seconds after it had started. At least then the model aircraft has to be landed.

5.9.13 Schedule of Manoeuvres

The schedule F3P-AA is recommended to be flown in local competitions, so as to offer advanced pilots a suitable way to achieve skills to step-up to schedules F3P-AP.

The schedule F3P-AP is a preliminary schedule for expert pilots in Indoor Aerobatic Power Model Aircraft competitions.

The schedule F3P-AF is a finals schedule for expert pilots in Indoor Aerobatic Power Model Aircraft competitions.

The schedule F3P-AFM is for competitors to demonstrate their artistic performances in Indoor Aerobatic Power Model Aircraft in conjunction with music. It is recommended that competitors in F3P-AFM have to go through a prequalification in F3P-AP and F3P-AF first.

ADVANCED SCHEDULE AA-17 (2016-2017)

K-Factor

AA-17.01	Tilted Humpty-Bump with ½ roll, ½ roll	K3
AA-17.02	Stall Turn	K3
AA-17.03	Horizontal Circle 8	K6
AA-17.04	Half Horizontal Square Circle	K2
AA-17.05	Roll Combination with consecutive ½ roll, ½ roll, ½ roll	K4
AA-17.06	Knife-Edge Humpty-Bump with ½ roll	K3
AA-17.07	Cobra Roll with ½ roll, ½ roll	K5
AA-17.08	½ Horizontal Circle	K3
AA-17.09	Vertical Upline with consecutive two ¾ rolls (Option: Vertical Upline with torque-roll)	K5
AA-17.10	½ Square Loop	K3
AA-17.11	Loop with ½ roll	K5
		Total K = 42

PRELIMINARY SCHEDULE AP-17 (2016-2017)

K-Factor

AP-17.01	Double Immelman with roll, roll	K3
AP-17.02	Figure M with ¼ roll, ¼ roll	K3
AP-17.03	Horizontal Circle 8 with two rolls	K6
AP-17.04	½ Horizontal Square Circle with two consecutive ¼ rolls	K2
AP-17.05	Roll Combination with consecutive 1 ¼ roll, 1 ¼ roll	K4
AP-17.06	Knife-Edge Humpty-Bump with two consecutive ½ rolls, ½ roll	K3
AP-17.07	Knife-Edge Cobra Roll with ¾ roll, ¾ roll	K3
AP-17.08	½ Horizontal Circle with four consecutive ¼ rolls	K5
AP-17.09	Vertical Upline with consecutive two ½ torque rolls	K5
AP-17.10	½ Square Loop with consecutive two ¼ rolls	K3
AP-17.11	Knife-Edge Loop with ¼ roll, ½ roll, ¼ roll	K5
		Total K = 42

FINAL SCHEDULE AF-17 (2016-2017)**K-Factor**

AF-17.01	Knife-Edge Humpty-Bump with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll	K3
AF-17.02	Figure 9 with roll	K3
AF-17.03	Vertical 8 with roll integrated	K5
AF-17.04	$\frac{1}{2}$ Horizontal Circle with consecutive eight $\frac{1}{8}$ rolls	K4
AF-17.05	Horizontal Double Immelmann Circle with $\frac{1}{4}$ roll, $\frac{1}{2}$ roll integrated, 1 $\frac{1}{2}$ roll, $\frac{1}{2}$ roll integrated, 1 $\frac{1}{2}$ roll, $\frac{1}{4}$ roll	K6
AF-17.06	Knife-Edge Top Hat with two consecutive $\frac{1}{2}$ rolls, two consecutive $\frac{1}{4}$ rolls	K3
AF-17.07	Double Fighter Turn with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll	K6
AF-17.08	$\frac{1}{2}$ Horizontal Square Circle with $\frac{1}{4}$ roll, two consecutive $\frac{1}{2}$ rolls, $\frac{1}{4}$ roll	K4
AF-17.09	Barrel Roll	K5
AF-17.10	$\frac{1}{2}$ Square Loop with roll	K2
AF-17.11	Clover Leaf with $\frac{1}{2}$ torque roll, $\frac{3}{4}$ torque roll, $\frac{3}{4}$ torque roll	K6

The descriptions of the manoeuvres and the Aresti diagrams for F3P-AP and F3P-AF appear in Annex 5M.

An explanation of the Aresti diagrams appears in F3A Annex 5A.

The Manoeuvre Execution Guide appears in F3A Annex 5B.

SCHEDULE F3P-AFM

AM1. Take-off

AM2. Freestyle (freely composed sequence of manoeuvres choreographed to music of the competitor's choice.)

AM3. Landing

The description of the manoeuvres for F3P-AFM appear at the end of Annex M.

ANNEX 5M**F3P – RADIO CONTROLLED AEROBATIC MODEL AIRCRAFT****DESCRIPTION OF MANOEUVRES****Preliminary Manoeuvres – Schedule F3P-AP-17 (2016-2017)****AP-17.01 Double Immelman with roll, roll**

From upright, pull through a $\frac{1}{2}$ loop, perform a roll into inverted flight, pull through a $\frac{1}{2}$ loop, perform a roll, exit upright.

AP-17.02 Figure M with $\frac{1}{4}$ roll, $\frac{1}{4}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{4}$ roll, perform a stall turn into vertical downline, push through a $\frac{1}{2}$ loop into a vertical upline, perform a stall turn into a vertical downline, perform a $\frac{1}{4}$ roll, push through $\frac{1}{4}$ loop, exit inverted.

AP-17.03 Horizontal Circle 8 with two rolls

From inverted perform a $\frac{1}{4}$ horizontal circle while performing the first $\frac{1}{4}$ of consecutive two rolls to the outside, then while continuing the rolling ($\frac{1}{4}$ of the rolls per $\frac{1}{4}$ of the circles), perform immediately another (full) circle in the opposite direction, then, while continuing the rolling accordingly finish the remaining $\frac{3}{4}$ of the first circle, exit inverted.

AP-17.04 $\frac{1}{2}$ Horizontal Square Circle with two $\frac{1}{4}$ rolls

From inverted, perform a $\frac{1}{4}$ horizontal circle with wings level, perform consecutively two $\frac{1}{4}$ rolls, perform a $\frac{1}{4}$ horizontal circle with wings level, exit upright.

AP-17.05 Roll Combination with consecutive 1 $\frac{1}{4}$ roll, 1 $\frac{1}{4}$ roll

From upright, perform consecutively a 1 $\frac{1}{4}$ roll and a 1 $\frac{1}{4}$ roll in opposite directions, exit upright.

AP-17.06 Knife-Edge Humpty-Bump with two consecutive $\frac{1}{2}$ rolls, $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform consecutively two $\frac{1}{2}$ rolls in opposite direction, perform a $\frac{1}{2}$ knife-edge loop into vertical downline, perform a $\frac{1}{2}$ roll, push through a $\frac{1}{4}$ loop, exit inverted.

AP-17.07 Knife-Edge Cobra Roll with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, perform a $\frac{3}{4}$ roll, perform a $\frac{1}{4}$ knife-edge loop into a 45° downline, perform a $\frac{3}{4}$ roll, pull through $\frac{1}{8}$ loop, exit upright.

AP-17.08 $\frac{1}{2}$ Horizontal Circle with four consecutive $\frac{1}{4}$ rolls

From upright, perform a $\frac{1}{2}$ horizontal circle while integrating consecutively four $\frac{1}{4}$ rolls, exit upright.

AP-17.09 Vertical Upline with consecutive two $\frac{1}{2}$ torque rolls

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, reduce flying speed to zero in the middle of that line, perform in this position consecutively two $\frac{1}{2}$ torque rolls in opposite directions, then accelerate, push through a $\frac{1}{4}$ loop, exit upright.

AP-17.10 $\frac{1}{2}$ Square Loop with consecutive two $\frac{1}{4}$ rolls

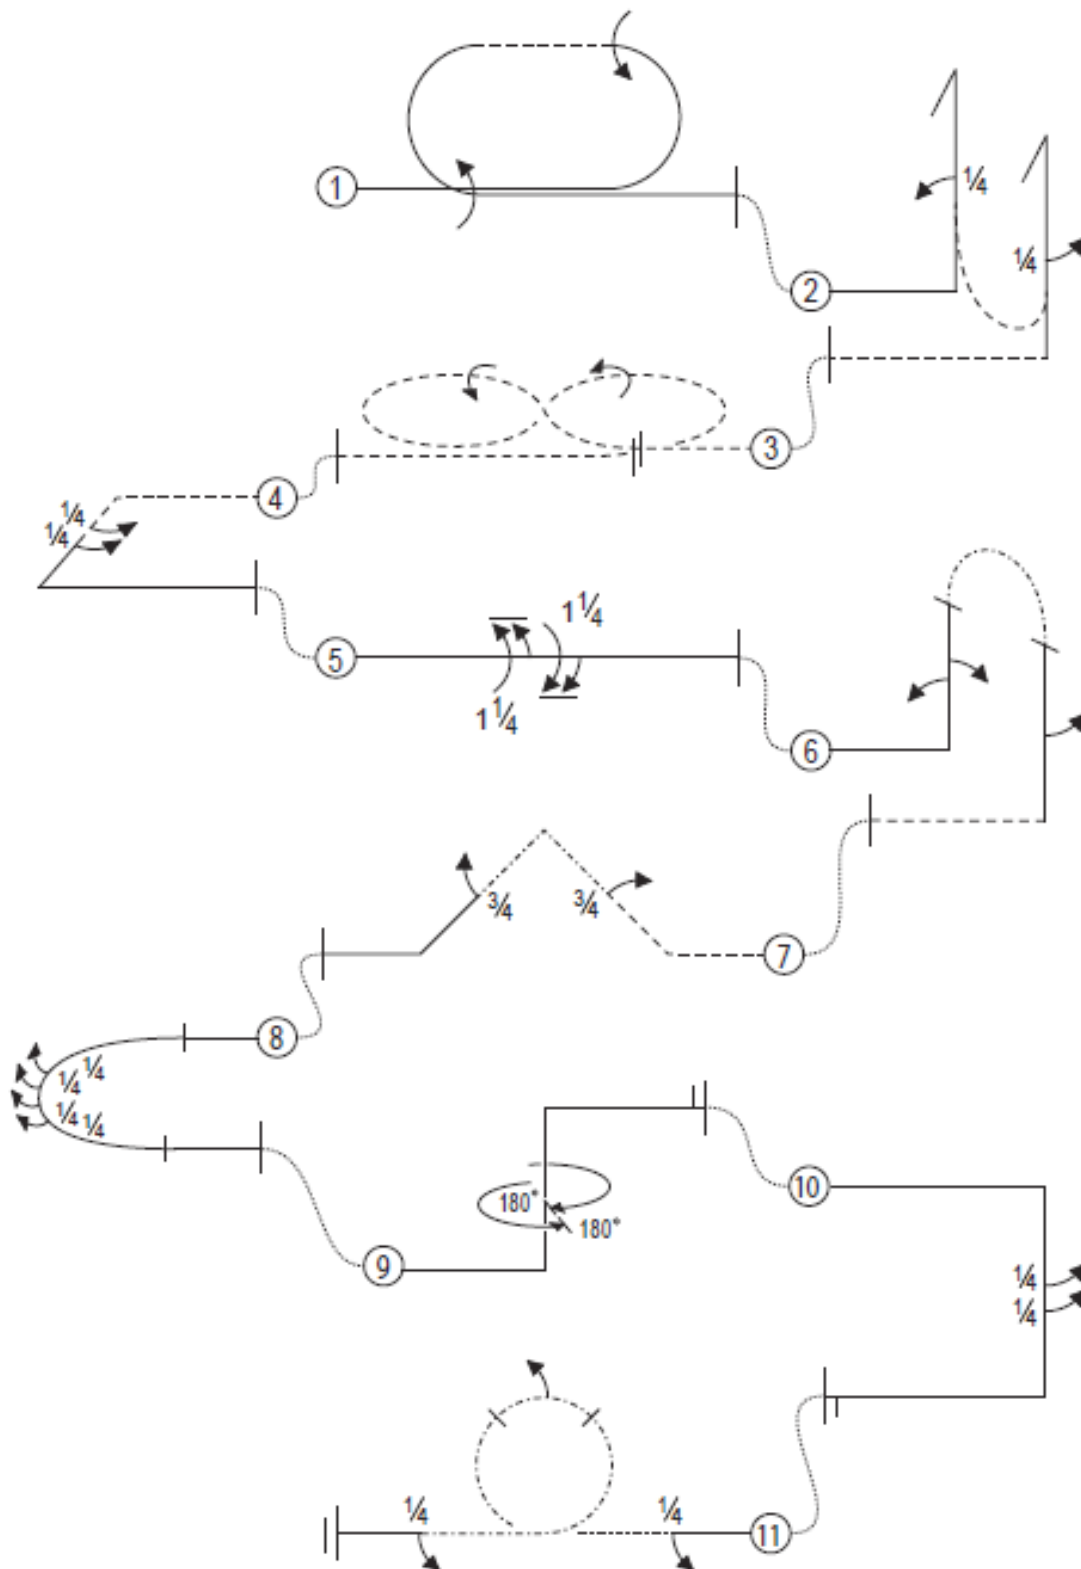

From upright, push through a $\frac{1}{4}$ loop into a vertical downline, perform consecutively two $\frac{1}{4}$ rolls pull through a $\frac{1}{4}$ loop, exit upright.

AP-17.11 Knife-Edge Loop with $\frac{1}{4}$ roll, $\frac{1}{2}$ roll, $\frac{1}{4}$ roll

From upright, perform $\frac{1}{4}$ roll, perform a knife-edge loop with a $\frac{1}{2}$ roll integrated in the top 90° , perform a $\frac{1}{4}$ roll, exit upright.

The Aresti diagrams appear overleaf.

PRELIMINARY SCHEDULE AP-17 (2016-2017)

Drawings by Ken Hirst
Nov. 2014

Finals Manoeuvres – Schedule F3P-AF-17 (2016-2017)

AF-17.01 Knife-Edge Humpty-Bump with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll

From upright, pull through a $\frac{1}{4}$ loop, perform a $\frac{3}{4}$ roll, perform a $\frac{1}{2}$ knife-edge loop, perform a $\frac{3}{4}$ roll, exit inverted.

AF-17.02 Figure 9 with roll

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a roll, pull through a $\frac{3}{4}$ loop, exit upright.

AF-17.03 Vertical 8 with roll integrated

From upright, push through a loop, push through another loop while performing a roll integrated in the last 90° of the first loop and in the first 90° of the second loop, exit upright.

AF-17.04 $\frac{1}{2}$ Horizontal Circle with consecutive eight $\frac{1}{8}$ rolls

From upright, perform a $\frac{1}{2}$ horizontal circle while integrating consecutively eight $\frac{1}{8}$ rolls, exit upright.

AF-17.05 Horizontal Double Immelmann Circle with $\frac{1}{4}$ roll, $\frac{1}{2}$ roll integrated, $1\frac{1}{2}$ roll, $\frac{1}{2}$ roll integrated, $1\frac{1}{2}$ roll, $\frac{1}{4}$ roll

From upright, perform a $\frac{1}{4}$ roll in the centre into a sustained knife-edge flight, perform a $\frac{1}{2}$ circle while performing a half roll to the outside integrated, immediately followed by a $1\frac{1}{2}$ roll in opposite direction, perform a sustained knife-edge flight, perform a $\frac{1}{2}$ circle while performing a $\frac{1}{2}$ roll to the outside integrated, immediately followed by a $1\frac{1}{2}$ roll in opposite direction, perform a sustained knife-edge flight, perform a $\frac{1}{4}$ roll in the centre, exit upright.

AF-17.06 Knife-Edge Top Hat with two consecutive $\frac{1}{2}$ rolls, two consecutive $\frac{1}{4}$ rolls

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform consecutively two $\frac{1}{2}$ rolls in opposite direction, perform a $\frac{1}{4}$ knife-edge loop into a horizontal knife-edge flight, perform a $\frac{1}{4}$ knife-edge loop into a vertical downline, perform consecutively two $\frac{1}{4}$ rolls, push through a $\frac{1}{4}$ loop, exit inverted.

AF-17.07 Double Fighter Turn with $\frac{3}{4}$ roll, $\frac{3}{4}$ roll

From inverted, push through a $\frac{1}{8}$ loop into a 45° upline, perform a $\frac{3}{4}$ roll, push through a $\frac{1}{2}$ knife-edge circle into a 45° downline, perform a $\frac{1}{4}$ knife-edge loop into a 45° upline, push through a $\frac{1}{2}$ knife-edge circle into a 45° downline, perform a $\frac{3}{4}$ roll, push through a $\frac{1}{8}$ loop, exit inverted.

AF-17.08 $\frac{1}{2}$ Horizontal Square Circle with $\frac{1}{4}$ roll, two consecutive $\frac{1}{2}$ rolls, $\frac{1}{4}$ roll

From inverted, perform a $\frac{1}{4}$ roll, push into a $\frac{1}{4}$ horizontal circle, perform consecutively two $\frac{1}{2}$ rolls in opposite directions, push through a $\frac{1}{4}$ horizontal circle, perform a $\frac{1}{4}$ roll, exit upright.

AF-17.09 Barrel Roll

From upright, pull through a $\frac{1}{8}$ loop into a 45° upline, perform a barrel-roll with 45° spiral pitch, perform a 45° upline, push through a $\frac{1}{8}$ loop, exit upright.

AF-17.10 $\frac{1}{2}$ Square Loop with roll

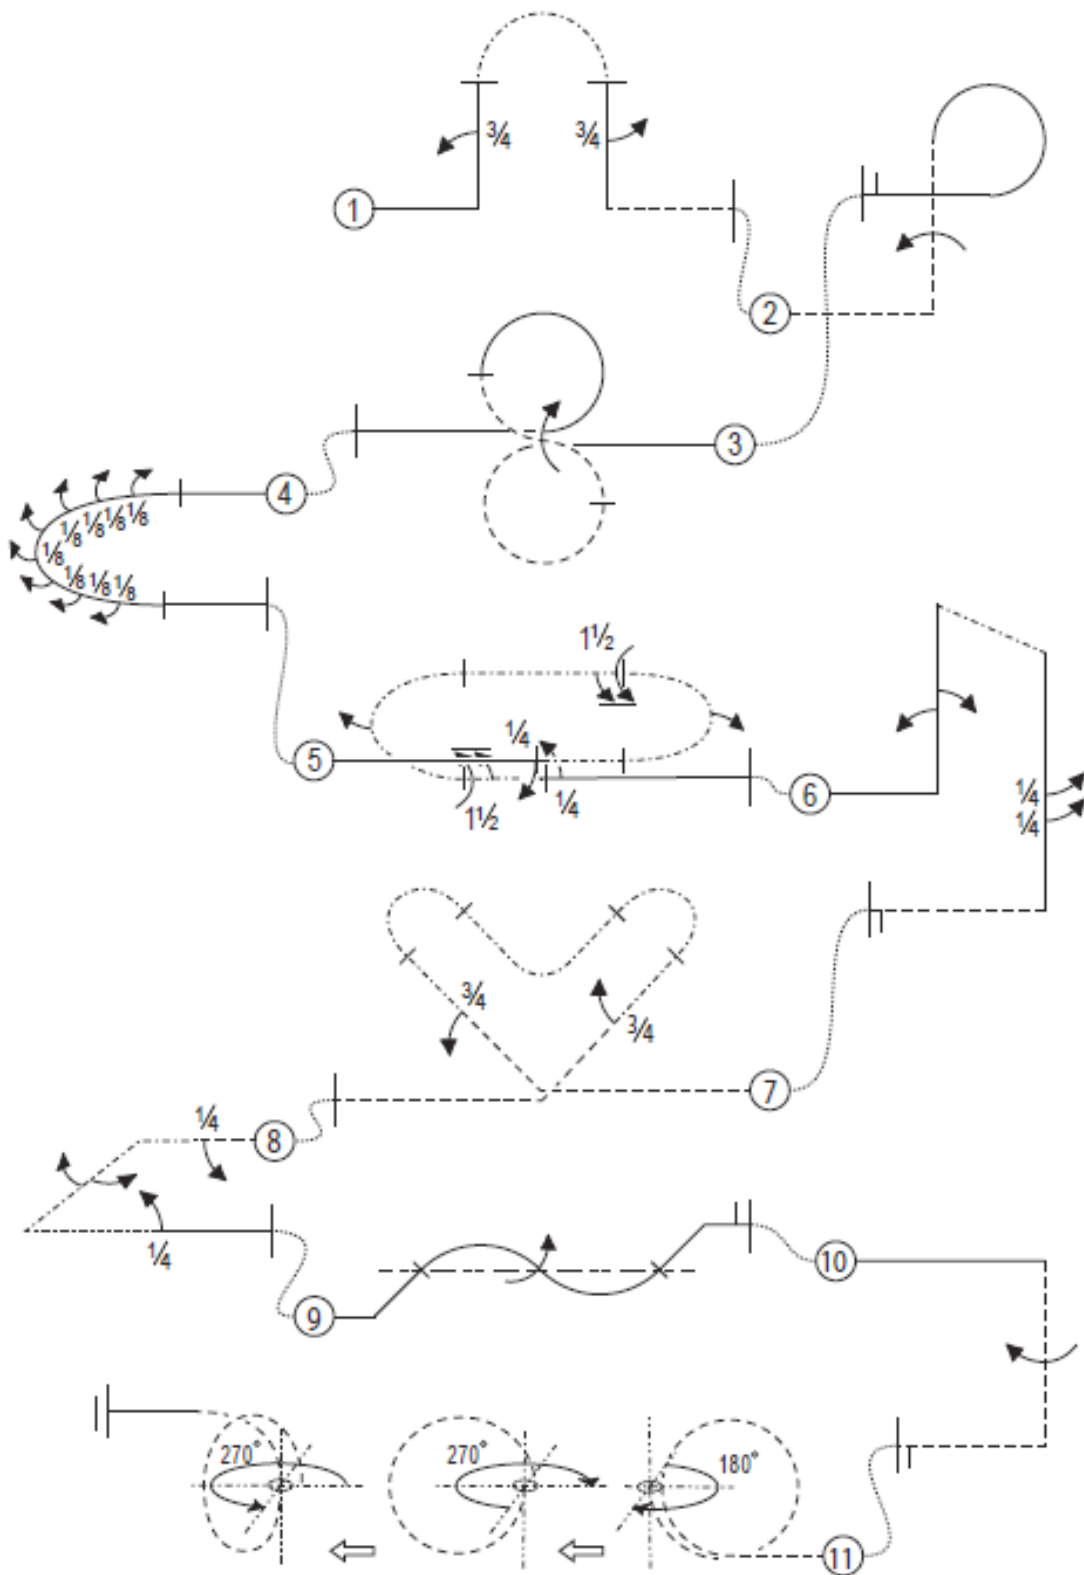

From upright, push through a $\frac{1}{4}$ loop into a vertical downline, perform a roll, push through a $\frac{1}{4}$ loop, exit inverted.

AF-17.11 Clover Leaf with $\frac{1}{2}$ torque roll, $\frac{3}{4}$ torque roll, $\frac{3}{4}$ torque roll

From inverted, push through a $1\frac{1}{4}$ loop, while reducing flying speed to zero, perform a $\frac{1}{2}$ torque roll, then accelerate to push through a loop, while reducing flying speed to zero, perform a $\frac{3}{4}$ torque roll, then accelerate to push through a loop while reducing flying speed to zero, perform a $\frac{3}{4}$ torque roll, then accelerate to push through a $\frac{1}{4}$ loop, exit upright.

The Aresti diagrams appear overleaf.

FINAL SCHEDULE AF-17 (2016-2017)

Drawings by Ken Hirose
Nov. 2014

ADVANCED SCHEDULE AA-17 (2016-2017)

AA-17.01 Double Immelman with $\frac{1}{2}$ roll, $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{2}$ loop, perform a $\frac{1}{2}$ roll, into level flight, push through a $\frac{1}{2}$ loop, perform a $\frac{1}{2}$ roll, exit upright.

AA-17.02 Stall Turn

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a stall turn into vertical downline, pull through $\frac{1}{4}$ loop, exit upright.

AA-17.03 Horizontal Circle 8

From upright perform a $\frac{1}{4}$ horizontal circle, then perform immediately another (full) circle in the opposite direction, then finish the remaining $\frac{3}{4}$ of the first circle, exit upright.

AA-17.04 Half Horizontal Square Circle

From upright, perform a $\frac{1}{4}$ horizontal circle with wings level, perform a $\frac{1}{4}$ horizontal circle with wings level, exit upright.

AA-17.05 Roll Combination with consecutive $\frac{1}{2}$ roll, $\frac{1}{2}$ roll, $\frac{1}{2}$ roll

From upright, perform consecutively three $\frac{1}{2}$ rolls in opposite directions, exit inverted.

AA-17.06 Knife-Edge Humpty-Bump with $\frac{1}{2}$ roll

From inverted, push through a $\frac{1}{4}$ loop into a vertical upline, perform a $\frac{1}{2}$ roll, perform a $\frac{1}{2}$ knife-edge loop into vertical downline, pull through a $\frac{1}{4}$ loop, exit upright.

AA-17.07 Cobra Roll with $\frac{1}{2}$ roll, $\frac{1}{2}$ roll

From upright, pull through a $\frac{1}{8}$ loop into a 45° upline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{4}$ loop into a 45° downline, perform a $\frac{1}{2}$ roll, exit upright.

AA-17.08 $\frac{1}{2}$ Horizontal Circle

From upright, perform a $\frac{1}{2}$ horizontal circle, exit upright.

AA-17.09 Vertical Upline with consecutive two $\frac{3}{4}$ rolls (Option: Vertical Upline with torque roll)

From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform consecutively two $\frac{3}{4}$ rolls in opposite directions, push through a $\frac{1}{4}$ loop, exit upright.

Option: From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, reduce flying speed to zero, perform a torque roll, then accelerate into a vertical upline, push through a $\frac{1}{4}$ loop, exit upright.

AA-17.10 $\frac{1}{2}$ Square Loop

From upright, push through a $\frac{1}{4}$ loop into a vertical downline, push through a $\frac{1}{4}$ loop, exit inverted.

AA-17.11 Loop with $\frac{1}{2}$ roll

From inverted, perform a loop with a $\frac{1}{2}$ roll integrated in the top 90° , exit upright.

The Aresti diagrams appear overleaf.

ADVANCED SCHEDULE AA-17 (2016-2017)

Drawings by Ken Hulse
May 2015

Manoeuvres – Schedule F3P-AFM

AFM1. Take-off Sequence

Place the model aircraft on the floor and take-off.

AFM2. Freestyle

A sequence of manoeuvres, freely composed by the competitor and flown in harmony to simultaneously played music of his choice. Any possible flight manoeuvres may be flown and "show effects" presented, as long as safety is not compromised and conformity to the rules is met. It is permitted to perform different programs in conjunction with different music in each round. The performance is judged for the entire flight from start to finish and in accordance to the following three criteria:

		K Factors
1		Flying Style
	- Precision of manoeuvres	2
	- Utilisation of flight performance scope/difficulty of manoeuvres	2
	-Variety of manoeuvres/new manoeuvres	2
2		Artistic Quality
	- Synchronisation to music	3
	- Reflection of the mood of the music/show effects	2
	- Sequence of quiet and dynamic phases	1
3		Overall Impression
	- Utilisation of manoeuvring area	2
	- Continuity of schedule	2
	- Positioning/safety	2

Judges Notes:

Unlike class F3A, although accompanied by its basic rules, F3P-AFM mostly focuses on spectator and media efficacy. This is why the performances should be extraordinarily spectacular and entertaining under these aspects.

For the Judges it is recommended to make "pencil" notes right away during the presentation. So corrections are still possible in course of the flight. All three criteria have to be marked simultaneously and evenly.

Although it is subjective, judging the presentations has to follow the judging guide and judging notes. Bias in favour of, or against, particular persons, models, music pieces etc must not influence the judging.

1 Flying Style

The flying skills of the pilot count herein. Flight sections and manoeuvres should be precise in the sense of F3A. Difficult manoeuvres are marked higher. The pilot is to demonstrate that he safely governs his model in any position. (Judges Guide F3A Annex 5B)

In addition, the pilot is to utilise the full flight performance scope of his model. Fast and slow flying, snap manoeuvres, hovering etc. The manoeuvres should show positive as well as negative "g"-portions: loops, rolls, snaps, spins, stall-turns, tailslides, hovering, torque-rolls, flat circles, Lomcevac, circles, etc. New or extraordinary manoeuvres are marked higher. Frequent repetition of the same manoeuvre has to be downgraded respectively. Manoeuvres should be positioned in parallel or rectangular to the safety line. Poorly governed, unplanned or casually flown manoeuvres will be downgraded. The same applies to phases less extraordinarily attractive.

cont/...

2 Artistic Quality

The music (choreography) has to enhance the presentation and to create a complimentary atmosphere. The flight performance should be synchronised with the music and must not be a "3D-sketch" with background music. On the other hand the music must not detract from the presentation. The selected music piece(s) should contain fast-slow, soft-loud and dramatic sections. The manoeuvres should follow the music and end with it. The mood of the selected music should be reflected in the manoeuvres and the presentation. Show effects can support this. Music pieces with little contrast, variety or tempi result in downgrades.

3 Overall impression

A well made combination of flying style-music-entertainment is desired. The presentation should fill the manoeuvring area and form an uninterrupted unit with fluent transitions between the individual elements. Various thrill effects are requested. The performance should be orientated towards judges and spectators, although risky flying towards judges and spectators will result in downgrades.

AFM3. Landing Sequence

The termination of the flight in any kind of way provided it is performed in a safe manner.

5.12 CLASS F3S – RADIO CONTROLLED AEROBATIC POWER JET MODEL AIRCRAFT

Note: When F3S rules refer back to F3A (5.1) rules, then disregard any reference to World and Continental Championships.

5.12.1 Definition of a Radio Controlled Aerobatic Power Jet Model Aircraft

A model aircraft, but not a helicopter, which uses turbine jet(s) or ducted fan(s) as the propulsion source(s) and which is aerodynamically manoeuvred by control surface(s) in attitude, direction, and altitude by a pilot on the ground using radio control. Variable thrust direction of the propulsion device(s) is not permitted.

5.12.2 General Characteristics of a R/C Aerobatic Power Jet Model Aircraft

- a) The R/C Aerobatic Power Jet Model Aircraft shall use as a propulsion device either
 - a) turbo jet/s or
 - b) ducted fan/s.

Ducted fans may use piston engines or electric motors as a power source.

- b) The number of model aircraft eligible for entry is two (2).
- c) Paragraph B.3.1.a) of Section 4B (Builder of Model Aircraft) is not applicable to class F3S.
- d) For power device limitations, noise rule, and radio equipment: See 5.1.2
- e) Noise limits apply to model aircraft with piston engines only.

5.12.3. Definition and number of helpers

See 5.1.3.

5.12.4 Number of flights

See 5.1.4.

5.12.5 Definition of an attempt

See 5.1.5.

5.12.6 Number of attempts

See 5.1.6.

5.12.7 Definition of an official flight:

See 5.1.7.

5.12.8 Marking:

See 5.1.8 except for:

The manoeuvring zone is at a distance of approximately 150-200 m from the pilot (depending on the size of the model aircraft). The two lines of the lateral limits are each at an angle of 75 degrees left and right. Marking of the manoeuvring zone limits have to be set accordingly.

5.12.9 Classification:

See 5.1.9

5.12.10 Judging

See 5.1.10 but giving consideration to the dimensions, inertia and speed of a jet model aircraft."

5.12.11 Organisation for Aerobatic Power Jet Model Aircraft Contests

See 5.1.11. except for:

The allowed starting time is six (6) minutes and the flying time five (5) minutes. The competitor must be informed when five (5) minutes of the starting time have elapsed.

5.12.12 Execution of manoeuvres

See 5.1.12.

5.12.13 Schedule of manoeuvres

Schedule S-15 (2011-2015, 2016-2017)

K Factor

S15.01:	Loop with roll integrated over top 90 degrees	4
S15.02:	Half reverse Cuban 8 with consecutive two $\frac{1}{4}$ rolls	2
S15.03:	Opposite knife-edge Flight	5
S15.04:	Immelmann with roll	2
S15.05:	Reverse Cuban 8 with two consecutive two $\frac{1}{4}$ rolls	4
S15.06:	Half square loop on corner	2
S15.07:	Figure 9 with roll up	3
S15.08:	Pull-push-pull Humpty Bump with half roll down	3
S15.09:	45° Upline with four consecutive $\frac{1}{8}$	3
S15.10:	Half loop	1
S15.11:	Roll Combination with consecutive half slow roll and in opposite direction two $\frac{1}{4}$ rolls	5
S15.12:	Pull-pull-pull Humpty Bump with half roll down	3
S15.13:	Triangle with roll	3

For the description of the manoeuvres, judging notes, and Aresti diagrams, see Annex 5X.

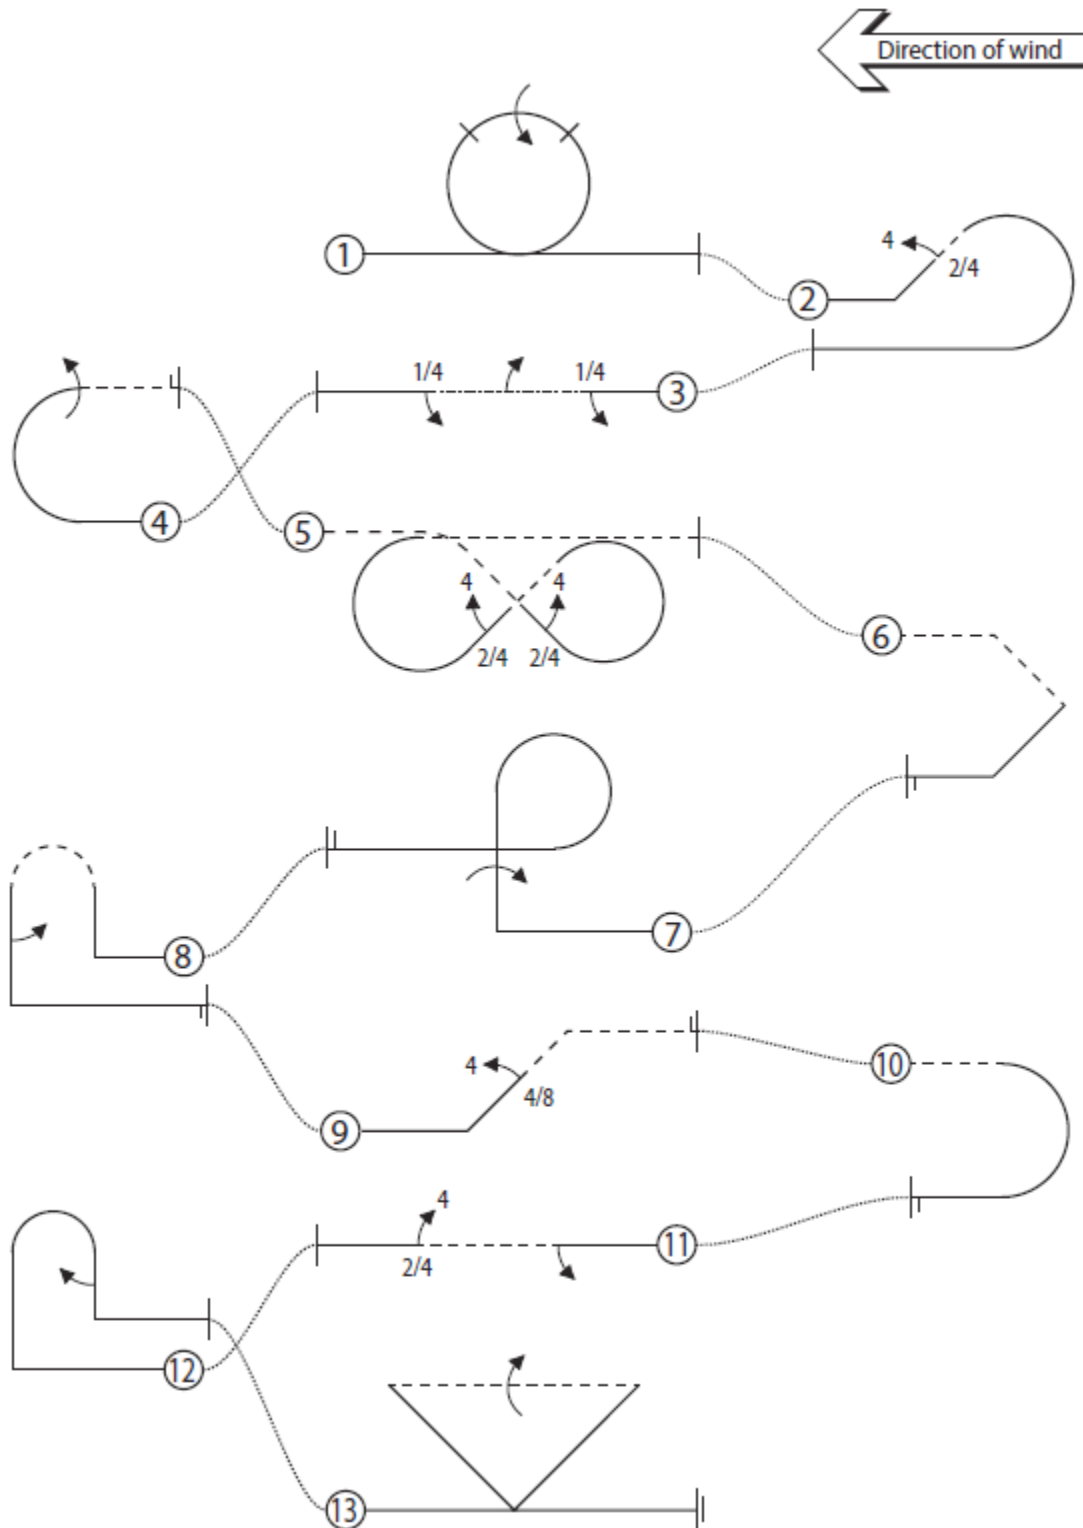

For the Manoeuvre Execution Guide, see Annex 5B.

ANNEX 5X**F3S – RADIO CONTROLLED AEROBATIC JET MODEL AIRCRAFT****DESCRIPTION OF MANOEUVRES**

- S-15.01 Loop, with roll integrated over top 90 degrees**
From upright, pull through a loop while performing an integrated roll in the top 90 degrees of the loop, exit upright.
- S-15.02 Half Reverse Cuban 8 with consecutive two $\frac{1}{4}$ rolls**
From upright, pull through a $\frac{1}{8}$ loop into a 45 degree upline, perform consecutively two $\frac{1}{4}$ rolls, pull through a $\frac{5}{8}$ loop, exit upright.
- S-15.03 Opposite Knife-edge Flight**
From upright, perform a $\frac{1}{4}$ roll to knife-edge flight, perform a $\frac{1}{2}$ roll in the opposite direction, to knife-edge flight, perform a $\frac{1}{4}$ roll, exit upright.
- S-15.04 Immelmann with roll**
From upright, pull through a $\frac{1}{2}$ loop, immediately followed by a roll, exit inverted.
- S-15.05 Reverse Cuban 8 with two consecutive $\frac{1}{4}$ rolls**
From inverted, pull through a $\frac{1}{8}$ loop into a 45 degree downline, perform consecutively two $\frac{1}{4}$ rolls, pull through a $\frac{3}{4}$ loop into a 45 degree downline, perform consecutively two $\frac{1}{4}$ rolls, pull through a $\frac{5}{8}$ loop, exit inverted.
- S-15.06 Half Square Loop on Corner**
From inverted, pull through a $\frac{1}{8}$ loop into a 45 degree downline, pull through a $\frac{1}{4}$ loop into a 45 degree downline, pull through $\frac{1}{8}$ loop, exit upright.
- S-15.07 Figure 9 with roll up**
From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, perform a roll, pull through a $\frac{3}{4}$ loop, exit upright.
- S-15.08 Pull-push-pull Humpty Bump with half roll down**
From upright, pull through a $\frac{1}{4}$ loop to a vertical upline, push through a $\frac{1}{2}$ loop into a vertical downline, perform a half roll, pull through a $\frac{1}{4}$ loop, exit upright.
- S-15.09 45 ° Upline with four consecutive $\frac{1}{8}$ rolls**
From upright, pull into a 45 degree upline and perform consecutively four $\frac{1}{8}$ rolls, pull through $\frac{1}{4}$ loop, exit inverted.
- S-15.10 Half Loop**
From inverted, pull through a $\frac{1}{2}$ loop, exit upright.
- S-15.11 Roll Combination with consecutive half slow roll, and in opposite direction two $\frac{1}{4}$ rolls**
From upright, perform consecutively a $\frac{1}{2}$ slow roll, a $\frac{1}{4}$ roll in opposite direction, a $\frac{1}{4}$ roll, exit upright.
- S-15.12 Pull-pull-pull Humpty Bump with half roll down**
From upright, pull through a $\frac{1}{4}$ loop into a vertical upline, pull through a $\frac{1}{2}$ loop into a vertical downline, perform a $\frac{1}{2}$ roll, pull through a $\frac{1}{4}$ loop exit upright.
- S-15.13 Triangle with roll**
From upright, pull through a $\frac{1}{8}$ loop into a 45 degree upline. Pull through a $\frac{3}{8}$ loop into a horizontal line perform a roll, pull through a $\frac{3}{8}$ loop into a 45 degree downline. Pull through a $\frac{1}{8}$ loop, exit upright.

The Aresti diagrams appear overleaf.

SCHEDULE of MANOEUVRES F3S 2016

ANNEX 5N

RULES FOR WORLD CUP EVENTS

F3A, F3P & F3M AEROBATIC WORLD CUP

5N.1. **Class**

The F3A, F3P and F3M classes are recognised for World Cup competition (aerobatic model aircraft).

5N.2. **Competitors**

All competitors in the specified open international contests are eligible for the World Cup.

5N.3. **Contests**

Contests included in the World Cup must appear on the FAI Contest Calendar, and must be run according to the FAI Sporting Code. The contests eligible for a World Cup in a particular year, must be nominated before the CIAM Bureau Meeting at the end of the preceding year, and must be included in the FAI Contest Calendar. The selection of the contests should be according to the following guidelines:

- a) a maximum of two contests may be selected for any one country.
- b) each competitor may count only one competition from each country in Europe (taking the better score for any European country in which he has scored in two competitions).
- c) five (5) judges have to be appointed for each judges' panel and a TBL scoring system has to be applied.

5N.4. **Points allocation**

The points to be allocated to competitors will depend on the number (N) of competitors who have completed at least one flight in the event with a normalised result of minimum 750.00 points.

Points are allocated to competitors who have completed at least one flight in the event, according to their placing in the results, as given in the following tables:

5N.4.1. **Class F3A**

a) **N>20**

Placing	1	2	3	4	5	6	20	21 and after
Points	20	19	18	17	16	15	1	0

A bonus of 8 points is given to the first placed competitor; 5 points to the second placed and 3 points to the third placed.

b) **N≤20**

Placing	1	2	3	4	5	6	N-1	N
Points	N	N-1	N-2	N-3	N-4	N-5	2	1

The bonus is defined as follows:

- for first place: $N/3$ rounded up to the nearest whole number of points, with a maximum of 7 points;
- for second place: $N/5$ rounded up to the nearest whole number of points, with a maximum of 4 points;
- for third place: $N/7$ rounded up to the nearest whole number of points, with a maximum of 3 points.

In the event of a tie between competitors for any placing, the competitors will share the points which would have been awarded to the places covered had the tie been resolved (round up the score to the nearest whole number of points).

5N.4.2. Classes F3M and F3P**a) N>15**

Placing	1	2	3	4	5	6	15	16 and after
Points	15	14	13	12	11	10	1	0

A bonus of 8 points is given to the first placed competitor; 5 points to the second placed and 3 points to the third placed.

b) N≤15

Placing	1	2	3	4	5	6	N-1	N
Points	N	N-1	N-2	N-3	N-4	N-5	2	1

The bonus is defined as follows:

- For first place: $N/3$ rounded up to the nearest whole number of points, with a maximum of 7 points;
- For second place: $N/5$ rounded up to the nearest whole number of points, with a maximum of 4 points;
- For third place: $N/7$ rounded up to the nearest whole number of points, with a maximum of 3 points.

In the event of a tie between competitors for any placing, the competitors will share the points which would have been awarded to the places covered had the tie been resolved (round up the score to the nearest whole number of points).

5N.5. Classification

The World Cup results are determined by considering the total of points obtained by each competitor in the World Cup events. Up to three events may be counted, selecting each competitor's best scores during the year. The winner of the World Cup is the competitor with the greatest total.

In the event of a tie for first, second, and third place, the place will be determined according to the following criteria:

The number of events counted is increased, one at a time, from three until the winner is obtained. If this does not separate the tied competitors, then the winner will be determined by considering the points obtained in the best three events multiplied by the number of competitors who have completed at least one flight in the event. The winner is the one with the greatest total thus calculated.

5N.6. Awards

The winner is awarded the title of winner of the World Cup. Certificates, medals and trophies may be awarded by the CIAM F3 Aerobatics sub-committee if available.

5N.7. Organisation

The F3 Aerobatics sub-committee shall be responsible for organising the World Cup, and may nominate a responsible person or special sub-committee to collate the results.

5N.8. Communication

The F3 Aerobatics sub-committee nominated World Cup coordinator must receive the results from each contest in the World Cup, and then calculate and publish the World Cup positions. These should be distributed to the news agencies and should also be available, by payment of a nominal fee, to any interested bodies or individuals. Final results of the World Cup must be sent to the FAI, National Airports Controls, and the modelling press.

5N.9. Responsibilities of competition organisers

Competition organisers must propose their event for inclusion in the World Cup, when nominating events for the FAI international Sporting Calendar. The final selection of events from these proposals is made by the CIAM Bureau as defined in paragraph 3.

Immediately after the event, the competition organiser must send the results to the World Cup coordinator, within one month as required in the Sporting code B.2.5. Any failure to return scores promptly will be reviewed by the CIAM Bureau when considering the competition calendar for the following year.

5N.10. **Board of judges**

A board of three responsible people shall be nominated by the CIAM F3 Aerobatics sub-committee to rule on any protest concerning the World Cup during a year. Any protest must be submitted in writing to the F3 Aerobatics sub-committee chairman and must be accompanied by a fee of 50 Euros. In the event of the jury upholding the protest, the fee will be returned.
